PART I

Item 1. Business.

General Development of Business. Halliburton Company's predecessor was established in 1919 and incorporated under the laws of the State of Delaware in 1924. Halliburton Company (the Company) provides energy services, engineering and construction services and manufactures products for the energy industry. Information related to acquisitions and dispositions is set forth in Note 14 to the financial statements of this annual report.

Financial Information About Business Segments. The Company is comprised of three business segments. See Note 2 to the financial statements of this annual report for financial information about these three business segments.

Description of Services and Products. The following is a summary which briefly describes the Company's services and products for each business segment.

The Energy Services Group segment provides a wide range of services and products to provide both discrete services and products and integrated solutions to customers in the exploration, development and production of oil and natural gas. The Energy Services Group operates worldwide, serving major oil companies, independent operators and national oil companies. The segment includes Halliburton Energy Services (HES), which offers pressure pumping equipment and services, logging and perforating products and services, drilling systems and services, drilling fluid systems, drill bits, specialized completion and production equipment and services and well control products and services; Brown & Root Energy Services, which provides upstream oil and gas engineering, procurement and construction, project management and production services, subsea construction, fabrication and installation of onshore and offshore pipelines, offshore and production platforms, marine engineering and other marine related projects; Landmark Graphics Corporation, which provides integrated exploration and production information systems and professional services; and Halliburton Energy Development (HED), which creates business opportunities for the development, production and operation of oil and gas fields in conjunction with the Company's customers. In March 1999, HED was combined with HES.

The Engineering and Construction Group segment provides: conceptual design, process design, detailed engineering, procurement, project and construction management; construction of chemical and petrochemical plants, refineries, liquefied natural gas (LNG) and gas processing facilities, pulp and paper mills, metal processing plants, airports, water and wastewater systems; technical and economic feasibility studies; site evaluation; repair and refitting of submarines and surface ships; operations and maintenance services, and engineering, logistics and wastewater management services for commercial industry, utilities and government customers.

The Dresser Equipment Group segment designs, manufactures and markets highly engineered products and systems for oil and gas producers, transporters, processors, distributors and users throughout the world. Products and systems of this segment include compressors, turbines, generators, electric motors, pumps, engines and power systems, valves and controls, instruments, meters and pipe couplings, blowers and gasoline dispensing systems.

Markets and Competition. The Company is one of the world's largest diversified energy services and engineering and construction services companies. The Company's services and products are sold in highly competitive markets throughout the world. Competitive factors impacting sales of the Company's services and products are: price, service (including the ability to deliver services and products on an "as needed, where needed" basis), product quality, warranty and technical proficiency. A growing number of customers are now indicating a preference for integrated services and solutions. These integrated services and solutions, in the case of the Energy Services Group, relate to all phases of exploration, development and production of oil and gas, and in the case of the Engineering and Construction Group, relate to all phases of design, procurement, construction project management and maintenance of a facility. Demand for these types of integrated services and solutions is based primarily upon quality of service, technical proficiency and value created.

The Company conducts business worldwide in over 120 countries. Since the markets for the Company's services and products are so large and cross many geographic lines, a meaningful estimate of the number of competitors cannot be made. These markets are, however, highly competitive with many substantial companies operating in each market. Generally, the Company's services and products are marketed through its own servicing and sales organizations. A small

Note 1. Significant Accounting Policies

The Company employs accounting policies that are in accordance with generally accepted accounting principles in the United States. The preparation of financial statements in conformity with generally accepted accounting principles requires Company management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Ultimate results could differ from those estimates.

Basis of presentation. On September 29, 1998, the Company completed the acquisition of Dresser Industries, Inc. (Dresser) pursuant to the Agreement and Plan of Merger (the Merger) dated as of February 25, 1998. The Merger was accounted for using the pooling of interests method of accounting for business combinations. Accordingly, the Company's financial statements have been restated to include the accounts of Dresser for all periods presented. Prior to the Merger, Dresser had a fiscal year-end of October 31. Beginning in 1998, Dresser's fiscal year-end of October 31 has been conformed to Halliburton's calendar year-end. Periods through December 31, 1997 contain Dresser's information on a fiscal year-end basis combined with Halliburton's information on a calendar year-end basis. Dresser's operating results for November and December of 1997 are presented within the consolidated statements of shareholders' equity as "conforming fiscal years."

Principles of Consolidation. The consolidated financial statements include the accounts of the Company and all majority-owned subsidiaries. All material intercompany accounts and transactions are eliminated. Investments in other affiliated companies in which the Company has at least 20% ownership and does not have management control are accounted for on the equity method. Certain prior year amounts have been reclassified to conform with the current year presentation.

Revenues and Income Recognition. The Company recognizes revenues as services are rendered or products are shipped. The distinction between services and product sales is based upon the overall activity of the particular business operation. Revenues from engineering and construction contracts are reported on the percentage of completion method of accounting using measurements of progress towards completion appropriate for the work performed. All known or anticipated losses on contracts are provided for currently. Post-contract customer support agreements are recorded as deferred revenues and recognized as revenue ratably over the contract periods of generally one year's duration. Training and consulting service revenues are recognized as the services are performed.

Research and Development. Research and development expenses are charged to income as incurred. Such charges were $308.1 million in 1998, $259.2 million in 1997 and $218.0 million in 1996.

Software Development Costs. Costs of developing software for sale are charged to expense when incurred, as research and development, until technological feasibility has been established for the product. Thereafter, software development costs are capitalized until the software is ready for general release to customers. The Company capitalized costs of $13.4 million in 1998, $14.5 million in 1997 and $12.9 million in 1996 related to software developed for resale. Amortization expense related to these costs was $17.5 million for 1998, $15.0 million for 1997 and $12.5 million for 1996. Once the software is ready for release, amortization of the software development costs begins. Capitalized software development costs are amortized over periods which do not exceed three years.

Income Per Share. Basic income per share amounts are based on the weighted average number of common shares outstanding during the year. Diluted income per share includes additional common shares that would have been outstanding if potential common shares with a dilutive effect had been issued. See Note 11 for a reconciliation of basic and diluted income per share from continuing operations. Prior year amounts have been adjusted for the two-for-one common stock split declared on June 9, 1997, and effected in the form of a stock dividend paid on July 21, 1997.

Source: HALLIBURTON CO, 10-K, March 23, 1999

Asbestosis Litigation. Since 1976, Dresser and its former divisions or subsidiaries have been involved in litigation resulting from allegations that third parties had sustained injuries and damage from the inhalation of asbestos fibers contained in certain products manufactured by Dresser and its former divisions or subsidiaries or companies acquired by Dresser.

Over the last 20 years approximately 183,000 claims have been filed against Dresser and its former divisions or subsidiaries. Claims continue to be filed with 29,400 new claims filed in 1998. Dresser and its former divisions or subsidiaries have entered into agreements with insurance carriers which cover, in whole or in part, indemnity payments, legal fees and expenses for certain categories of claims. Dresser and its former divisions or subsidiaries are in negotiation with carriers over coverage for the remaining categories of claims. Because these agreements are governed by exposure dates, payment type and the product involved, the covered amount varies by individual claim. In addition, lawsuits are pending against several carriers seeking to recover additional amounts related to these claims.

Since 1976, Dresser and its former divisions and subsidiaries have settled or disposed of 120,000 claims for a gross cost of approximately $89.1 million with insurance carriers paying all but $37.0 million. Provision has been made for the estimated exposure, based on historical experience and expected recoveries from insurance carriers, related to the 63,400 claims which were open at the end of 1998 including 14,000 for which settlements are pending. Management has no reason to believe that the insurance carriers will not be able to meet their share of future obligations under the agreements.

Pursuant to an agreement entered into at the time of the spin-off, Global Industrial Technologies, Inc. ("Global" formerly [redacted]CO, Inc.) assumed liability for asbestos related claims filed against Dresser after July 31, 1992 relating to refractory products manufactured or marketed by the Harbison Walker Refractories Division of Dresser Industries, Inc. These asbestos claims are subject to certain agreements with insurance carriers that cover expense and indemnity payments. Global now disputes that it assumed responsibility for any of such asbestos claims based on negligence. Global also now asserts certain other claims relating to the insurance coverage responding to asbestos claims. In order to resolve these assertions, Global has invoked the dispute resolution provisions of the 1992 agreement, which require binding arbitration. On February 19, 1999 Dresser filed suit in the Delaware Chancery Court seeking an injunction to restrain such arbitration as being barred by the Delaware statute of limitations. The Company believes that these new assertions by Global are without merit and intends to vigorously defend itself against them.

Management recognizes the uncertainties of litigation and the possibility that a series of adverse rulings could materially impact operating results. However, based upon Dresser's historical experience with similar claims, the time elapsed since Dresser and its former divisions or subsidiaries discontinued sale of products containing asbestos, and management's understanding of the facts and circumstances that gave rise to such claims, management believes that the pending asbestos claims will be resolved without material effect on Halliburton's financial position or results of operations.

Environmental. The Company is involved through its subsidiaries as a potential responsible party (PRP) in remedial activities to clean up various "Superfund" sites under applicable federal law which imposes joint and several liability, if the harm is indivisible, on certain persons without regard to fault, the legality of the original disposal, or ownership of the site. Although it is very difficult to quantify the potential impact of compliance with environmental protection laws, management of the Company believes that any liability of the Company with respect to all but one of such sites will not have a material adverse effect on the results of operations of the Company.

With respect to a site in Jasper County, Missouri (Jasper County Superfund Site), sufficient information that would enable management to quantify the Company's potential liability has not been developed and management believes the process of determining the nature and extent of remediation at this site and the total costs thereof will be lengthy. Brown & Root, Inc., now Kellogg Brown & Root, Inc. (KBR), a subsidiary of the Company, has been named as a PRP with respect to the Jasper County Superfund Site by the Environmental Protection Agency (EPA). The Jasper County Superfund Site includes areas of mining activity that occurred from the 1800s through the mid 1950s in the southwestern portion of Missouri. The site contains lead and zinc mine tailings produced from mining activities. KBR is one of nine participating PRPs that have agreed to perform a Remedial Investigation/Feasibility Study (RI/FS), which, due to various delays, is not expected to be completed until late 1999. Although the entire Jasper

PART I

Item 1. Business.

General development of business. Halliburton Company's predecessor was established in 1919 and incorporated under the laws of the State of Delaware in 1924. Halliburton Company provides a variety of services, equipment, maintenance, and engineering and construction to energy, industrial and governmental customers. Information related to acquisitions and dispositions is set forth in Note 2 to the financial statements of this annual report.

Financial information about business segments. We operate in three business segments:

- Energy Services Group;
- Engineering and Construction Group; and
- Dresser Equipment Group.

See Note 3 to the financial statements of this annual report for financial information about these three business segments.

Description of services and products. Our ability to mix, bundle or integrate products and services to meet the varied needs of our customers is of increasing importance in the highly competitive environment in which we operate. We believe that, based upon our customers' requirements, our future success will depend, in part, upon our ability to offer total capabilities and solutions on a global, industry-encompassing scale as well as discrete services and products. Our business strategy is focused on continuing to maintain global leadership in providing our customers integrated services, equipment, engineering, construction and maintenance. This strategy is dependent upon four key goals:

- technological leadership;
- operational excellence;
- innovative business relationships; and
- a dynamic workforce.

We offer a broad suite of products and services through three business segments operating globally as six business units. The following summary describes our services and products for each business segment and unit.

ENERGY SERVICES GROUP

The Energy Services Group segment consists of Halliburton Energy Services, Brown & Root Energy Services, and Landmark Graphics. This segment provides a wide range of discrete services and products and integrated solutions to customers in the exploration, development and production of oil and gas. The segment serves independent, integrated, and national oil companies.

Halliburton Energy Services provides discrete products and services and integrated solutions for oil and gas exploration, development and production throughout the world. Products and services range from the initial evaluation of producing formations to drilling, completion, production and well maintenance for a single well or an entire field. Major product and service line offerings include:

- pressure pumping, including:
  - zonal isolation (cementing);
  - production enhancement (fracturing and acidizing); and
  - tools and testing;
- logging and perforating;
- drilling systems;
- drilling fluid systems;
- drill bits; and
- specialized completion and production equipment and services, and well control products and services.

Zonal isolation is the process used to bond the well and well casing while isolating fluid zones and maximizing wellbore stability. This is accomplished by pumping cement and chemical additives to fill the space between the casing and the side of the wellbore. Our zonal isolation service line also provides casing equipment and services.

Production enhancement encompasses the technologies and capabilities to optimize oil and gas reservoirs through a variety of pressure pumping services, including: fracturing and acidizing, sand control, coiled tubing, well control,

Source: HALLIBURTON CO, 10-K, March 14, 2000

nitrogen services, and specialty services. These services are commonly used to clean out a formation or to fracture formations to allow increased oil and gas production.

Tools and testing includes tubing-conveyed perforating products and services, including drill stem and other well testing tools, data acquisition services and production applications.

Logging products and services include our Magnetic Resonance Imaging Logging (MRIL(R)), high-temperature logging as well as traditional open-hole and cased-hole logging tools. MRIL(R) tools apply medical diagnostic magnetic resonance imaging technology to the evaluation of subsurface rock formations in newly drilled oil and gas wells. Our high temperature logging tools combine advanced electronic and mechanical tool designs, quality materials and a telemetry system to operate in high temperature and high pressure downhole environments. Open-hole tools provide information on well visualization, formation evaluation (including resistivity, porosity, lithology and temperature), rock mechanics and sampling. Cased-hole tools provide cementing evaluation, reservoir monitoring, pipe evaluation, pipe recovery and perforating.

Drilling systems and services are marketed under the Sperry-Sun Drilling Systems name. These services include directional and horizontal drilling, measurement-while-drilling, logging-while-drilling, multilateral wells and completion systems, and rig site information systems.

Drilling and completion fluids are marketed under the Baroid Drilling Fluids name. These services provide fluid systems and performance additives for oil and gas drilling, completion and workover operations. In addition, Baroid maintains and markets products for a wide variety of industrial customers.

Drill bits, marketed under the trade name of Security DBS, provide roller cone rock bits, fixed cutter bits, coring equipment and services, and other downhole tools used to drill wells.

Completion products include subsurface safety valves and flow control equipment, surface safety systems, packers and specialty completion equipment, production automation, well screens, and slickline equipment and services.

Halliburton Energy Services, through its solutions group, also provides fully integrated oilfield management and technical expertise in the following areas:

- o integrated solutions; and
- o reservoir description.

Integrated solutions provides value-added oilfield management and solutions to independent, integrated, and national oil companies. Integrated solutions enhance field deliverability and maximize the customer's return on investment. These services leverage the entire Halliburton Energy Services product service groups and technologies as well as overall project management.

Reservoir description is composed of two groups - geoscience and engineering and computed products. The geoscience and engineering group provides a comprehensive suite of products including opportunity assessment, reservoir characterization, field development planning, production enhancement, reservoir surveillance, and reservoir management. The computed products group provides interpretation for wellbore imaging, waveform sonics, cement evaluation, production, and a variety of open and cased-hole information evaluation logs. By combining reservoir description with field service capabilities and technology, Halliburton Energy Services provides complete reservoir solutions.

Brown & Root Energy Services provides worldwide engineering and construction services to the upstream oil and gas industry. Projects are on a cost reimbursable or lump sum, turnkey basis. Many field development projects also involve services of Halliburton Energy Services and Landmark Graphics. Brown & Root Energy Services' primary product service lines include:

- o deepwater and floating production, including subsea;
- o general offshore operations; and
- o land operations.

The deepwater and floating production group provides deepwater riser solutions, floating production technologies and project management systems tailored to the specific demands of our customers. The group integrates these capabilities with our subsea group to optimize customer solutions. The subsea product service group provides construction and installation capabilities, including a comprehensive fleet of semi-submersibles, remotely-operated vehicles and support vessels. These vehicles and vessels are used to install subsea manifolds, templates, spools, fixed risers, dynamic risers, mechanical connections, pilings and flexible pipelines. The subsea product service group

Source: HALLIBURTON CO, 10-K, March 14, 2000

App.72

USCA5 7691

SA467

also provides trenching and repair operations and manufactures and supplies flexible pipe. Flexible pipe is used primarily in the offshore oil and gas industry for both topside and subsea applications.

The general offshore group integrates capabilities required to plan, engineer, construct and operate offshore production facilities. The group includes front-end engineering, detailed engineering, project management, procurement and construction, fabrication, and production services. Capabilities include the engineering, procurement and construction of offshore drilling and production platforms, process skids and modules, subsea components, turret mooring systems and production manifolds, structural pipe/caissons, semi-drilling rig components and prefabricated components. Fabrication products and services are provided by Brown & Root Energy Services at one facility and Brown & Root Energy Services and a joint venture partner at two additional facilities. Pipeline services provide full turnkey pipeline services to onshore and offshore customers through a joint venture.

The land operations group combines the distinctive capabilities required to plan, engineer, construct and operate onshore plants and pipelines. Capabilities include front-end engineering, detailed engineering, procurement, construction, operations and project management.

Landmark Graphics provides integrated exploration and production software information systems and professional services. Landmark's software transforms vast quantities of seismic, well log and other data into detailed computer models of petroleum reservoirs to optimize exploration, development and production decisions. Landmark's products and services integrate data workflows and operational processes across disciplines including geophysics, geology, drilling, engineering, production, economics, finance and corporate planning, and key partners and suppliers.

ENGINEERING AND CONSTRUCTION GROUP

The Engineering and Construction Group segment, consisting of Kellogg Brown & Root and Brown & Root Services, provides a wide range of services to energy and industrial customers and government entities worldwide.

Kellogg Brown & Root is a global provider of technology-based engineering and construction services using proprietary processes including project development, technology licensing and development, consulting, project management, engineering, procurement, construction, operations and maintenance services. Projects for our customers are often executed on a lump-sum, turnkey basis, including:

- engineering, procurement and construction services for:
  - liquefied natural gas and gas processing facilities;
  - ammonia plant design and technology;
  - olefins, polymer and phenol plants;
  - forest products facilities; and
  - mineral processing;
- industrial maintenance services to private sector customers; and
- planning, process technologies and engineering, procurement and construction services in the construction of refineries utilizing proprietary techniques in fluid catalytic cracking, hydroprocessing, and residuum processing.

Brown & Root Services is a global provider to the private (primarily non-energy) and government sectors offering planning, design, construction, operations, maintenance, asset management and decommissioning of infrastructure, facilities and installations. The following summarizes the business unit's product service lines and their distinctive capabilities:

- management and engineering - consulting and civil engineering services providing master planning and consulting, design, engineering, project and construction management, and facility start-up;
- construction - management of large projects including prisons, stadiums and highways. Other services include on-call construction and facilities modification and repair;

Source: HALLIBURTON CO, 10-K, March 14, 2000

- operations, maintenance and logistics - operation of government facilities and installations, providing food and housing services for the life-cycle of large scale projects, weapons demilitarization, aircraft servicing, fuels handling and management, refuse collection, equipment maintenance and operations, public works support, and transportation services; and
- investment management - participation in the design, building, financing and operation and ownership of toll roads, marine, and other public sector facilities.

DRESSER EQUIPMENT GROUP

The Dresser Equipment Group segment designs, manufactures and markets highly engineered products and systems for customers in the energy industry, although power, chemical and transportation industries are also significant customers for its products and services. Product service lines in this segment include:

- compression and pumping;
- measurement;
- flow control; and
- power systems.

The compression and pumping product service line included two joint ventures: Dresser-Rand and Ingersoll-Dresser Pump. Dresser-Rand manufactures and services gas turbines; centrifugal, reciprocating and axial compressors; steam turbines; electric motors and generators. Ingersoll-Dresser Pump provides a wide range of pumps for use in process and petrochemical industries, power generation, pulp and paper, water resources, mining, pipeline, marine, general industry and agriculture. On October 4, 1999, we announced we would sell our interests in Dresser-Rand and Ingersoll-Dresser Pump to Ingersoll-Rand. Ingersoll-Dresser Pump was sold on December 30, 1999. Dresser-Rand was sold on February 2, 2000. See Note 2 and Note 18 to the financial statements of this annual report for additional information on the sale of our interests in these joint ventures.

The measurment product service line includes the DMD, Instrument and Wayne divisions. DMD produces gas meters, electronic products for gas systems, pipe fittings, couplings and repair devices for gas and water utilities and other industries. We are in the process of consolidating the DMD and Roots divisions within the measurement product service line. Instrument products include gauges, thermometers, switches, transducers, transmitters and instrument isolators for pressure and temperature measurement and control. Wayne manufactures and supplies retail automation control and fuel dispensing systems worldwide.

The flow control product service line includes the Dresser Valve division which manufactures ball, gate, check, butterfly, plug, safety relief, automated globe, rotary control and specialty valves; chemical injection pumps; regulators; surge relievers and actuators.

The power systems product service line includes Roots and Waukesha Engine divisions. Roots manufactures rotary-lobe and centrifugal air and gas handling blowers as well as vacuum pumps. Waukesha Engine manufactures spark ignited gaseous fueled engines and packaged engine-driven generator sets used in field gas compression.

Markets and competition. We are one of the world's largest diversified energy services and engineering and construction services companies. Our services and products are sold in highly competitive markets throughout the world. Competitive factors impacting sales of our services and products are: price, service (including the ability to deliver services and products on an "as needed, where needed" basis), product quality, warranty and technical proficiency. While we provide a wide range of discrete services and products, a number of customers have indicated a preference for integrated services and solutions. In the case of the Energy Services Group, integrated services and solutions relate to all phases of exploration, development and production of oil and gas. In the case of the Engineering and Construction Group, integrated services and solutions relate to all phases of design, procurement, construction project management and maintenance of a facility. Demand for these types of integrated services and solutions is based primarily upon quality of service, technical proficiency and value created.

We conduct business worldwide in over 120 countries. Since the markets for our services and products are so large and crosses so many geographic lines, a meaningful estimate of the number of competitors cannot be made. The industries we serve are highly competitive and we have many substantial competitors. Generally, our services and products are marketed through our own servicing and sales organizations. A small percentage of sales of the Energy Service Group's and Dresser Equipment Group's products is made through supply stores and third-party representatives.

RESPONSIBILITY FOR FINANCIAL REPORTING

We are responsible for the preparation and integrity of our published financial statements. The financial statements have been prepared in accordance with accounting principles generally accepted in the United States and, accordingly, include amounts based on judgments and estimates made by our management. We also prepared the other information included in the annual report and are responsible for its accuracy and consistency with the financial statements.

The financial statements have been audited by the independent accounting firm, Arthur Andersen LLP. Arthur Andersen was given unrestricted access to all financial records and related data, including minutes of all meetings of stockholders, the Board of Directors and committees of the Board.

We maintain a system of internal control over financial reporting, which is intended to provide reasonable assurance to our management and Board of Directors regarding the reliability of our financial statements. The system includes:

- a documented organizational structure and division of responsibility;
- established policies and procedures, including a code of conduct to foster a strong ethical climate which is communicated throughout the company; and
- the careful selection, training and development of our people.

Internal auditors monitor the operation of the internal control system and report findings and recommendations to management and the Board of Directors. Corrective actions are taken to address control deficiencies and other opportunities for improving the system as they are identified. The Board, operating through its Audit Committee, which is composed entirely of Directors who are not current or former officers or employees of the company, provides oversight to the financial reporting process.

There are inherent limitations in the effectiveness of any system of internal control, including the possibility of human error and the circumvention or overriding of controls. Accordingly, even an effective internal control system can provide only reasonable assurance with respect to the reliability of our financial statements. Also, the effectiveness of an internal control system may change over time.

We have assessed our internal control system in relation to criteria for effective internal control over financial reporting described in "Internal Control-Integrated Framework" issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based upon that assessment, we believe that, as of December 31, 1999, our system of internal control over financial reporting met those criteria.

Note 1. Significant Accounting Policies

We employ accounting policies that are in accordance with generally accepted accounting principles in the United States. The preparation of financial statements in conformity with generally accepted accounting principles requires us to make estimates and assumptions that affect:

- the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements; and
- the reported amounts of revenues and expenses during the reporting period.

Ultimate results could differ from those estimates.

Principles of consolidation. The consolidated financial statements include the accounts of our company and all majority-owned subsidiaries. All material intercompany accounts and transactions are eliminated. Investments in other companies in which we own between a 20% to 50% interest are accounted for using the equity method. Specific prior year amounts have been reclassified to conform with the current year presentation.

Revenues and income recognition. We recognize revenues as services are rendered or products are shipped. The distinction between services and product sales is based upon the overall activity of the particular business operation. Revenues from engineering and construction contracts are reported on the percentage of completion method of accounting using measurements of progress towards completion appropriate for the work performed. All known or anticipated losses on contracts are provided for currently. Claims and change orders which are in the process of being negotiated with customers, for extra work or changes in the scope of work are included in revenue when collection is deemed probable. Post-contract customer support agreements are recorded as deferred revenues and recognized as revenue ratably over the contract period of generally one year's duration. Training and consulting service revenues are recognized as the services are performed.

Research and development. Research and development expenses are charged to income as incurred. See Note 3 for research and development expense by business segment.

Software development costs. Costs of developing software for sale are charged to expense when incurred, as research and development, until technological feasibility has been established for the product. Once technological feasibility is established, software development costs are capitalized until the software is ready for general release to customers. We capitalized costs related to software developed for resale of $12 million in 1999, $13 million in 1998 and $15 million in 1997. Amortization expense of software development costs was $15 million for 1999, $18 million for 1998 and $15 million for 1997. Once the software is ready for release, amortization of the software development costs begins. Capitalized software development costs are amortized over periods which do not exceed three years.

Income per share. Basic income per share amounts are based on the weighted average number of common shares outstanding during the year. Diluted income per share includes additional common shares that would have been outstanding if potential common shares with a dilutive effect had been issued. See Note 10 for a reconciliation of basic and diluted income per share from continuing operations.

Cash equivalents. We consider all highly liquid investments with an original maturity of three months or less to be cash equivalents.

Receivables. Our receivables are generally not collateralized. With the exception of claims and change orders which are in the process of being negotiated with customers, unbilled work on uncompleted contracts generally represents work currently billable and this work is usually billed during normal billing processes in the next month. These claims and change orders, included in unbilled receivables, amounted to $98 million and $89 million at December 31, 1999 and 1998, respectively and are generally expected to be collected in the following year.

Included in notes and accounts receivable are notes with varying interest rates. At December 31, 1999 notes receivable totaled $424 million including a note receivable of $377 million generated by the sale of Ingersoll-Dresser Pump. See Note 2. At December 31, 1998 notes receivable totaled $296 million including a note receivable generated by the sale of M-I. See Note 2.

Inventories. Inventories are stated at the lower of cost or market. Cost represents invoice or production cost for new items and original cost less allowance for condition for used material returned to stock. Production cost includes material, labor and manufacturing overhead. The cost of most inventories is determined using either the first-in, first-out method or the

Source: HALLIBURTON CO, 10-K, March 14, 2000

USCA5 7695

other disclosures concerning Dresser because we determined such information is not material to the holders of these notes.

In January 1999, as part of a legal reorganization associated with the merger, Halliburton Delaware, Inc., a first tier holding company subsidiary, was merged into Dresser. The majority of our operating assets and activities are now included within Dresser and its subsidiaries.

Dresser Industries, Inc.

Note 9. Commitments and Contingencies

Leases. At year end 1999, we were obligated under noncancelable operating leases, expiring on various dates through 2021, principally for the use of land, offices, equipment, field facilities, and warehouses. Total rentals charged to operations for such leases totaled $150 million in 1999, $287 million in 1998, and $203 million in 1997. Future total rentals on noncancelable operating leases are as follows: 2000, $133 million; 2001, $114 million; 2002, $94 million; 2003, $66 million; 2004, $39 million and thereafter, $114 million.

Asbestosis litigation. Since 1976, Dresser Industries, Inc. and its former divisions or subsidiaries have been involved in litigation resulting from allegations that third parties sustained injuries and damage from the inhalation of asbestos fibers contained in some products manufactured by Dresser, its former divisions or subsidiaries or by companies acquired by Dresser. In addition, the Engineering and Construction Group is involved in litigation resulting from allegations that third parties sustained injuries and damage from the inhalation of asbestos fibers contained in some of the materials which were used in various construction and renovation projects in the past.

Dresser and its former divisions or subsidiaries have entered into agreements with insurance carriers which cover, in whole or in part, indemnity payments, legal fees and expenses for specific categories of claims. Dresser and its former divisions or subsidiaries are in negotiation with insurance carriers over coverage for the remaining categories of claims. Because these agreements are governed by exposure dates, payment type and the product involved, the covered amount varies by individual claim. In addition, lawsuits are pending

Source: HALLIBURTON CO, 10-K, March 14, 2000

against several carriers seeking to recover additional amounts related to these claims. The Engineering and Construction Group is also involved in negotiations with their insurance carriers concerning the scope of coverage for asbestos claims.

Since 1976, approximately 237,300 claims have been filed against various current and former divisions and subsidiaries. Most of these claims relate to Dresser and its former divisions or subsidiaries. Approximately 129,650 of these claims have been settled or disposed of at a gross cost of approximately $99 million with insurance carriers responsible for all but approximately $23 million. Claims continue to be filed with about 46,400 new claims filed in 1999. We have established a reserve estimating our liability for asbestos claims. Our estimate is based on our historical litigation experience, settlements and expected recoveries from insurance carriers. Our expected insurance recoveries are based on agreements with insurance carriers or, where agreements are still under negotiation, estimated recoveries. We believe that the insurance carriers will be able to meet their share of future obligations under the agreements. At the end of 1999, there were about 107,650 open claims, including 19,000 for which settlements are pending. This compares with 70,500 open claims at the end of 1998. The accrued liabilities for these claims and corresponding receivables from carriers were as follows:

Millions of dollars	1999	1998
Accrued liability	$ 52	$ 53
Receivables from insurance companies	(27)	(34)
Net asbestos liability	$ 25	$ 19

We recognize the uncertainties of litigation and the possibility that a series of adverse court rulings could materially impact the expected resolution of asbestos related claims. However, based upon our historical experience with similar claims, the time elapsed since Dresser and its former divisions or subsidiaries discontinued sale of products containing asbestos, and our understanding of the facts and circumstances that gave rise to such claims, we believe that the pending asbestos claims will be resolved without material effect on our financial position or results of operations.

Dispute with Global Industrial Technologies, Inc. Under an agreement entered into at the time of the spin-off of Global Industrial Technologies, Inc., formerly INDRESCO, Inc., from Dresser Industries, Inc., Global assumed liability for all asbestos related claims filed against Dresser after July 31, 1992 relating to refractory products manufactured or marketed by the former Harbison-Walker Refractories division of Dresser. Those business operations were transferred to Global in the spin-off. These asbestos claims are subject to agreements with Dresser insurance carriers that cover expense and indemnity payments. However, the insurance coverage is incomplete and Global has to date paid the uncovered portion of those asbestos claims with its own funds.

Global now disputes that it assumed liability for any of these asbestos claims which were based upon Dresser's negligence, the acts of Harbison-Walker prior to its merger with Dresser in 1967, or punitive damages.

In order to resolve this dispute, Global invoked the dispute resolution provisions of the 1992 agreement, which require binding arbitration. Global has not claimed a specific amount of damages. We expect that Global's claim for reimbursement will be in excess of $40 million. In addition, Global is seeking relief from responsibility for pending claims based upon Dresser's negligence, the pre-1967 acts of Harbison-Walker, punitive damages, and for all similar future claims. On February 25, 2000, the arbitrator ruled that Global did assume responsibility for claims based on Dresser's negligence and for punitive damages. The arbitrator did not decide whether Global also assumed responsibility for the pre-1967 acts of Harbison-Walker, but reserved his decision pending further proceedings, although no timetable was set for those proceedings.

In 1999 Dresser brought suit against Global to enjoin it from suing Dresser's insurance carrier, Continental Insurance Company, for specific asbestos claims. Although a Texas court in Dallas entered a temporary injunction, a Texas appellate court reversed that decision and the matter remains pending before the trial court. Since then, in late 1999, Global sued Continental in federal court in Pennsylvania seeking coverage under Dresser insurance policies for claims we believe are covered by the pending arbitration. Dresser was not named in the lawsuit, and Continental has responded to Global by moving to dismiss that lawsuit because Dresser was not included. We believe that the issues involving Continental should be resolved in the pending arbitration. We believe that all of Global's claims and assertions are without merit and we intend to vigorously defend against them.

Note 1. Significant Accounting Policies

We employ accounting policies that are in accordance with generally accepted accounting principles in the United States. The preparation of financial statements in conformity with generally accepted accounting principles requires us to make estimates and assumptions that affect:

- the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements; and
- the reported amounts of revenues and expenses during the reporting period.

Ultimate results could differ from those estimates.

Principles of consolidation. The consolidated financial statements include the accounts of our company and all of our majority-owned subsidiaries. All material intercompany accounts and transactions are eliminated. Investments in other companies in which we own a 20% to 50% interest are accounted for using the equity method. Specific prior year amounts have been reclassified to conform to the current year presentation.

Revenues and income recognition. We recognize revenues as services are rendered or products are shipped. The distinction between services and product sales is based upon the overall activity of the particular business operation. Revenues from engineering and construction contracts are reported on the percentage of completion method of accounting using measurements of progress towards completion appropriate for the work performed. All known or anticipated losses on contracts are provided for currently. Claims and change orders which are in the process of being negotiated with customers, for extra work or changes in the scope of work are included in revenue when collection is deemed probable. Post-contract customer support agreements are recorded as deferred revenues and recognized as revenue ratably over the contract period of generally one year's duration. Training and consulting service revenues are recognized as the services are performed. Sales of perpetual software licenses, net of deferred maintenance fees, are recorded as revenue upon shipment. Sales of use licenses are recognized as revenue over the license period.

Research and development. Research and development expenses are charged to income as incurred. See Note 4 for research and development expense by business segment.

Software development costs. Costs of developing software for sale are charged to expense when incurred, as research and development, until technological feasibility has been established for the product. Once technological feasibility is established, software development costs are capitalized until the software is ready for general release to customers. We capitalized costs related to software developed for resale of $7 million in 2000, $12 million in 1999 and $13 million in 1998. Amortization expense of software development costs was $12 million for 2000, $15 million for 1999 and $18 million for 1998. Once the software is ready for release, amortization of the software development costs begins. Capitalized software development costs are amortized over periods which do not exceed three years.

Income per share. Basic income per share is based on the weighted average number of common shares outstanding during the year. Diluted income per share includes additional common shares that would have been outstanding if potential common shares with a dilutive effect had been issued. See Note 10 for a reconciliation of basic and diluted income per share.

Cash equivalents. We consider all highly liquid investments with an original maturity of three months or less to be cash equivalents.

Receivables. Our receivables are generally not collateralized. With the exception of claims and change orders which are in the process of being negotiated with customers, unbilled work on uncompleted contracts generally represents work currently billable, and this work is usually billed during normal billing processes in the next month. These claims and change orders, included in unbilled receivables, amounted to $113 million and $98 million at December 31, 2000 and 1999, respectively, and are generally expected to be collected in the following year.

Included in notes and accounts receivable are notes with varying interest rates. Notes receivable totaled $38 million at December 31, 2000 and $41 million at December 31, 1999.

App.82

USCA5 7702

SA478

On March 21, 2001 the Delaware Chancery Court ruled that Highlands is not obligated to provide insurance coverage for asbestos claims filed against Kellogg Brown & Root because, in the court's opinion, the agreements entered into by Highlands and Halliburton at the time of the spin-off terminated the policies previously written by Highlands that would otherwise cover such claims. This ruling, if it is not reversed on appeal, would eliminate our primary insurance covering asbestos claims against Kellogg Brown & Root for periods prior to the spin-off. Most claims filed against Kellogg Brown & Root allege exposure to asbestos prior to the spin-off and are disposed of for less than the limits of the Highlands policies. However, we and our legal counsel, Vinson & Elkins L.L.P., believe the court's ruling is wrong. We intend to appeal the ruling to the Delaware Supreme Court as soon as possible. Vinson & Elkins has opined to us that it is very likely that the ruling of the Chancery Court will be reversed because the ruling clearly contravenes the provisions of the applicable agreements between Highlands and Halliburton. Vinson & Elkins has also opined to us that it is likely that we will ultimately prevail in this ligitation.

Since 1976, approximately 282,000 claims have been filed against various current and former divisions and subsidiaries. About 25,000 of these claims relate to Kellogg Brown & Root and the balance of these claims relate to Dresser, its former divisions and subsidiaries. Approximately 165,000 of these claims have been settled or disposed of at a gross cost of approximately $324 million, with insurance carriers paying all but approximately $32 million. Claims continue to be filed, with about 45,000 claims filed in 2000. We have established an accrual estimating our liability for known asbestos claims. Our estimate is based on our historical litigation experience, settlements and expected recoveries from insurance carriers. Our expected insurance recoveries are based on agreements with carriers or, where agreements are still under negotiation or litigation, our estimate of recoveries. We believe that the insurance carriers with which we have signed agreements will be able to meet their share of future obligations under the agreements. Prior to the Chancery Court's ruling, Highlands Insurance Group, Inc., the parent of Highlands Insurance Company, stated in its SEC filings that if it lost the litigation with us and is required to pay the asbestos claims against Kellogg Brown & Root, there could be a material adverse impact on Highlands Insurance Group's financial position. Highlands Insurance Company reported statutory capital surplus of $152 million to the Texas Insurance Commission in its Quarterly Statement as of September 30, 2000. On March 12, 2001, Highlands Insurance Group, Inc. announced that it expected to report a significant loss for the fourth quarter of 2000 and for the full year 2000. Although we do not know the extent of the impact of this loss on Highlands Insurance Company, we believe that Highlands has the ability to pay substantially all of these asbestos claims when this litigation is resolved in our favor.

At December 31, 2000, there were about 117,000 open claims, including about 23,000 associated with recoveries we expect from Highlands. Open claims at December 31, 2000 also include 9,000 for which settlements are pending. The number of open claims at the end of 2000 compares with approximately 107,700 open claims at the end of the prior year. The accrued liabilities for these claims and corresponding billed and estimated recoveries from carriers are as follows:

Millions of dollars	December 31 2000	1999
Accrued liability	$ 88	$ 71
Estimated insurance recoveries:		
Highlands Insurance Company	(39)	(28)
Other insurance carriers	(12)	(18)
Net asbestos liability	$ 29	$ 25

As of December 31, 2000, we have accounts receivable from Highlands Insurance Company of $11 million for payments we have made on asbestos claims. If our appeal of the Chancery Court's ruling in the Highlands litigation is unsuccessful, we will be unable to collect this account receivable or the $39 million estimated accrued recovery from Highlands for asbestos claims. This may have a material adverse impact on the results of our operations and our financial position at that time.

Accounts receivable for billings to other insurance carriers for payments made on claims were $13 million at December 31, 2000 and $9 million at December 31, 1999.

We recognize the uncertainties of litigation and the possibility that a series of adverse court rulings or new legislation affecting the claims settlement process could materially impact the expected resolution of asbestos related claims. However, based upon:

- our historical experience with similar claims;
- the time elapsed since Dresser and its former divisions or subsidiaries discontinued sale of products containing asbestos;
- the time elapsed since Kellogg Brown & Root used asbestos in any construction process; and
- our understanding of the facts and circumstances that gave rise to asbestos claims,

we believe that the pending asbestos claims will be resolved without material effect on our financial position or results of operations.

Resolution of dispute with Global Industrial Technologies, Inc. We previously reported that under an agreement entered into at the time of the spin-off of Global Industrial Technologies, Inc., formerly INDRESCO, Inc., from Dresser Industries, Inc., Global assumed liability for all asbestos related claims filed against Dresser after July 31, 1992 relating to refractory products manufactured or marketed by the former Harbison-Walker Refractories division of Dresser. Those business operations were transferred to Global in the spin-off. These asbestos claims are subject to agreements with Dresser's insurance carriers that cover expense and indemnity payments. However, the insurance coverage is incomplete and Global has to-date paid the uncovered portion of asbestos claims with its own funds.

We also reported that a dispute arose with Global concerning those agreements, which led to arbitration and litigation proceedings. We have now resolved the dispute and agreed with Global that:

- the arbitration, and all related litigation, is dismissed;
- Global acknowledges its obligation to assume responsibility for new asbestos claims filed after the date of the spin-off;
- Global agrees to continue to cooperate with Dresser on Dresser's remaining refractory claims; and
- Dresser continues to make available its direct insurance program for the Global assumed asbestos liabilities.

Fort Ord litigation. Brown & Root Services is a defendant in civil litigation pending in federal court in Sacramento, California. The lawsuit alleges that Brown & Root Services violated provisions of the False Claims Act while performing work for the United States Army at Fort Ord in California. This lawsuit was filed by a former employee in 1997. Brown & Root Services has denied the allegations and is preparing to defend itself at trial. Further proceedings in this civil lawsuit have been stayed while the investigation referred to in the next paragraph is ongoing. We believe that it is remote that this civil litigation will result in any material amount of damages being assessed against the company, although the cost of our defense could well exceed $1 million before the matter is brought to a conclusion.

Although in 1998 the United States Department of Justice declined to join this litigation, it has advised us that Brown & Root Services is the target of a federal grand jury investigation regarding the contract administration issues raised in the civil litigation. Brown & Root Services has been served with grand jury subpoenas, which required the production of documents relating to the Fort Ord contract and similar contracts at other locations. We have also been informed that several current and former employees will be called to testify before the grand jury. We have retained independent counsel for these employees. We are cooperating in this investigation. The United States Department of Justice has not made any specific allegations against Brown & Root Services.

Environmental. We are subject to numerous environmental legal and regulatory requirements related to our operations worldwide. We take a proactive approach to evaluating and addressing the environmental impact of our operations. Each year we assess and remediate contaminated properties in order to avoid future liabilities and comply with legal and regulatory requirements. On occasion we are involved in specific environmental litigation and claims, including the clean-up of properties we own or have operated as well as efforts to meet or correct compliance-related matters.

Note 1. Significant Accounting Policies

We employ accounting policies that are in accordance with accounting principles generally accepted in the United States of America. The preparation of financial statements in conformity with accounting principles generally accepted in the United States of America requires us to make estimates and assumptions that affect:

- the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements; and
- the reported amounts of revenues and expenses during the reporting period.

Ultimate results could differ from those estimates.

Principles of consolidation. The consolidated financial statements include the accounts of our company and all of our subsidiaries in which we own greater than 50% interest or control. All material intercompany accounts and transactions are eliminated. Investments in companies in which we own 50% interest or less and have a significant influence are accounted for using the equity method and if we do not have significant influence we use the cost method. Prior year amounts have been reclassified to conform to the current year presentation.

Revenues and income recognition. We recognize revenues as services are rendered or products are shipped. The distinction between services and product sales is based upon the overall activity of the particular business operation. Revenues from engineering and construction contracts are reported on the percentage of completion method of accounting using measurements of progress towards completion appropriate for the work performed. Progress is generally based upon physical progress, man-hours or costs incurred based upon the appropriate method for the type of job. All known or anticipated losses on contracts are provided for currently. Claims and change orders which are in the process of being negotiated with customers, for extra work or changes in the scope of work are, included in revenue when collection is deemed probable. Training and consulting service revenues are recognized as the services are performed. Sales of perpetual software licenses, net of deferred maintenance fees, are recorded as revenue upon shipment. Sales of use licenses are recognized as revenue over the license period. Post-contract customer support agreements are recorded as deferred revenues and recognized as revenue ratably over the contract period of generally one year's duration.

Research and development. Research and development expenses are charged to income as incurred. See Note 4 for research and development expense by business segment.

Software development costs. Costs of developing software for sale are charged to expense when incurred, as research and development, until technological feasibility has been established for the product. Once technological feasibility is established, software development costs are capitalized until the software is ready for general release to customers. We capitalized costs related to software developed for resale of $19 million in 2001, $7 million in 2000 and $12 million in 1999. Amortization expense of software development costs was $16 million for 2001, $12 million for 2000 and $15 million for 1999. Once the software is ready for release, amortization of the software development costs begins. Capitalized software development costs are amortized over periods which do not exceed five years.

Income per share. Basic income per share is based on the weighted average number of common shares outstanding during the year. Diluted income per share includes additional common shares that would have been outstanding if potential common shares with a dilutive effect had been issued. See Note 10 for a reconciliation of basic and diluted income per share.

Cash equivalents. We consider all highly liquid investments with an original maturity of three months or less to be cash equivalents.

Receivables. Our receivables are generally not collateralized. With the exception of claims and change orders which are in the process of being negotiated with customers, unbilled work on uncompleted contracts generally represents work currently billable, and this work is usually billed during normal billing processes in the next several months. The claims and change orders, included in unbilled receivables, amounted to $234 million at December 31, 2001 and $113 million at December 31, 2000. Included in notes and accounts receivable are notes with varying interest rates totaling $19 million at December 31, 2001 and $38 million at December 31, 2000.

Yes X No ___

Indicate the number of shares outstanding of each of the issuer's classes of common stock, as of the latest practicable date.

Common stock, par value $2.50 per share:
Outstanding at April 30, 2000 - 443,933,065

Since 1976, approximately 252,550 claims have been filed against various current and former divisions and subsidiaries. Most of these claims relate to Dresser and its former divisions or subsidiaries. Approximately 146,000 of these claims have been settled or disposed of at gross cost of approximately $185 million with insurance carriers responsible for all but approximately $26 million. Claims continue to be filed, with about 15,250 new claims filed in the first quarter of 2000. We have established a reserve estimating our liability for known asbestos claims. Our estimate is based on our historical litigation experience, settlements and expected recoveries from insurance carriers. Our expected insurance recoveries are based on agreements with carriers or, where agreements are still under negotiation or litigation, our estimate of recoveries. We believe that the insurance carriers will be able to meet their share of future obligations under the agreements. At March 31, 2000, there were about 106,550 open claims, including 9,000 for which settlements are pending. This number of claims compares with 107,650 open claims at the end of 1999. The accrued liabilities for these claims and corresponding receivables from carriers were as follows:

Millions of dollars	March 31 2000	December 31 1999
Accrued liability	$ 88	$ 80
Receivables from insurance companies	63	55
Net asbestos liability	$ 25	$ 25

We recognize the uncertainties of litigation and the possibility that a series of adverse court rulings or new legislation affecting the claims settlement process could materially impact the expected resolution of asbestos related claims. However, based upon:

- our historical experience with similar claims;
- the time elapsed since Dresser and its former divisions or subsidiaries discontinued sale of products containing asbestos;
- the time elapsed since Kellogg Brown & Root used asbestos in any construction process; and
- our understanding of the facts and circumstances that gave rise to asbestos claims,

we believe that the pending asbestos claims will be resolved without material effect on our financial position or results of operations.

Dispute with Global Industrial Technologies, Inc. Under an agreement entered into at the time of the spin-off of Global Industrial Technologies, Inc., formerly INDRESCO, Inc., from Dresser Industries, Inc., Global assumed liability for all asbestos related claims filed against Dresser after July 31, 1992 relating to refractory products manufactured or marketed by the former Harbison-Walker Refractories division of Dresser. Those business operations were transferred to Global in the spin-off. These asbestos claims are subject to agreements with Dresser insurance carriers that cover expense and indemnity payments. However, the insurance coverage is incomplete and Global has to date paid the uncovered portion of those asbestos claims with its own funds.

Global now disputes that it assumed liability for any of these asbestos claims which were based upon Dresser's negligence, the acts of Harbison-Walker prior to its merger with Dresser in 1967, or punitive damages.

In order to resolve this dispute, Global invoked the dispute resolution provisions of the 1992 agreement, which require binding arbitration. Global has not claimed a specific amount of damages. We expect that Global's claim for reimbursement will be in excess of $40 million. In addition, Global is seeking relief from responsibility for pending claims based upon Dresser's negligence, the pre-1967 acts of Harbison-Walker, punitive damages, and for all similar future claims. On February 25, 2000, the arbitrator ruled that Global did assume responsibility for claims based on Dresser's negligence and for punitive damages. The arbitrator did not decide whether Global also assumed responsibility for the pre-1967 acts of Harbison-Walker, but reserved his decision pending further proceedings, although no timetable was set for those proceedings.

In 1999 Dresser brought suit against Global to enjoin it from suing Dresser's insurance carrier, Continental Insurance Company, for specific asbestos claims. Although a Texas court in Dallas entered a temporary injunction, a Texas appellate court reversed that decision and the matter remains pending before the trial court. Since then, in late 1999, Global sued Continental in federal court in Pennsylvania seeking coverage under Dresser insurance policies for claims we believe are covered by the pending arbitration. Dresser was not named in the lawsuit, and Continental has responded to Global by moving to dismiss that lawsuit because Dresser was not included. We believe that the issues involving Continental should be resolved in the pending arbitration. We believe that all of Global's claims and assertions are without merit and we intend to vigorously defend against them.

Yes X No ___

Indicate the number of shares outstanding of each of the issuer's classes of common stock, as of the latest practicable date.

Common stock, par value $2.50 per share:
Outstanding at July 31, 2000 - 445,531,000

pursuant to guaranteed cost policies issued by Highlands to our Kellogg Brown & Root subsidiary prior to the spin-off.

Since 1976, approximately 260,900 claims have been filed against various current and former divisions and subsidiaries. About 23,000 of these claims relate to Kellogg Brown & Root and the balance of these claims relate to Dresser and its former divisions or subsidiaries. Approximately 153,900 of these claims have been settled or disposed of. Claims continue to be filed, with about 24,700 new claims filed in the first six months of 2000. We have established a reserve estimating our liability for known asbestos claims. Our estimate is based on our historical litigation experience, settlements and expected recoveries from insurance carriers. Our expected insurance recoveries are based on agreements with carriers or, where agreements are still under negotiation or litigation, our estimate of recoveries. We believe that the insurance carriers with which we have signed agreements will be able to meet their share of future obligations under the agreements. Highlands has stated in its SEC filings that if they lose this litigation with us and are required to pay the asbestos claims against Kellogg Brown & Root, there could be a material adverse impact on their financial position. However, based on Highlands statutory capital surplus of $162 million as reported to the Texas Insurance Commission, we believe that Highlands has the ability to pay substantially all of these asbestos claims and that Highlands will be required to do so at the conclusion of the pending litigation.

At June 30, 2000, there were about 107,000 open claims, including about 21,000 associated with recoveries we expect from Highlands. Open claims at June 30, 2000 also include 9,800 for which settlements are pending. This number of claims compares with 107,700 open claims at the end of the prior year. The accrued liabilities for these claims and corresponding billed and estimated accrued receivables from carriers were as follows:

Millions of dollars	June 30 2000	December 31 1999
Accrued liability	$ 75	$ 71
Receivables from insurance companies:		
Highlands Insurance Company	40	38
Other insurance carriers	11	18
Net asbestos liability	$ 24	$ 25

Additional receivables billed to insurance carriers for payments made on claims were $8 million at June 30, 2000 and $9 million at December 31, 1999, none of which were due from Highlands Insurance Company.

We recognize the uncertainties of litigation and the possibility that a series of adverse court rulings or new legislation affecting the claims settlement process could materially impact the expected resolution of asbestos related claims. However, based upon:

- our historical experience with similar claims;
- the time elapsed since Dresser and its former divisions or subsidiaries discontinued sale of products containing asbestos;
- the time elapsed since Kellogg Brown & Root used asbestos in any construction process; and
- our understanding of the facts and circumstances that gave rise to asbestos claims,

we believe that the pending asbestos claims will be resolved without material effect on our financial position or results of operations.

Dispute with Global Industrial Technologies, Inc. Under an agreement entered into at the time of the spin-off of Global Industrial Technologies, Inc., formerly INDRESCO, Inc., from Dresser Industries, Inc., Global assumed liability for all asbestos related claims filed against Dresser after July 31, 1992 relating to refractory products manufactured or marketed by the former Harbison-Walker Refractories division of Dresser. Those business operations were transferred to Global in the spin-off. These asbestos claims are subject to agreements with Dresser insurance carriers that cover expense and indemnity payments. However, the insurance coverage is incomplete and Global has to-date paid the uncovered portion of those asbestos claims with its own funds.

Global now disputes that it assumed liability for any of these asbestos claims which were based upon Dresser's negligence, the acts of Harbison-Walker prior to its merger with Dresser in 1967, or punitive damages.

In order to resolve this dispute, Global invoked the dispute resolution provisions of the 1992 agreement, which require binding arbitration. Global has not claimed a specific amount of damages. We expect that Global's claim for reimbursement will be in excess of $40 million. HALLIBURTON COMPANY
Notes to Quarterly Financial Statements
(Unaudited)

Note 1. Management Representations

We employ accounting policies that are in accordance with generally accepted accounting principles in the United States. Preparation of financial statements in conformity with generally accepted accounting principles requires us to make estimates and assumptions that affect:

- the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements; and
- the reported amounts of revenues and expenses during the reporting period.

Ultimate results could differ from those estimates.

The accompanying unaudited condensed consolidated financial statements were prepared using generally accepted accounting principles for interim financial information, the instructions to Form 10-Q and applicable rules of Regulation S-X. Accordingly, these financial statements do not include all information or footnotes required by generally accepted accounting principles for complete financial statements and should be read together with our 2000 Annual Report on Form 10-K. Prior period amounts have been reclassified to be consistent with the current presentation.

In our opinion, the condensed consolidated financial statements present fairly our financial position as of June 30, 2001, the results of our operations for the three and six months ended June 30, 2001 and 2000 and our cash flows for the six months then ended. The results of operations for the three and six months ended June 30, 2001 and 2000 may not be indicative of results for the full year.

Note 2. Business Segment Information

We have two business segments - Energy Services Group and Engineering and Construction Group. Our segments are organized around the products and services provided to our customers. During the fourth quarter of 2000, we announced restructuring plans to combine engineering, construction, fabrication and project management operations into one company, Kellogg Brown & Root, reporting as our Engineering and Construction Group. This restructuring resulted in some activities moving from the Energy Services Group to the Engineering and Construction Group, effective January 1, 2001. Prior periods have been restated for this change.

The following table presents revenues and operating income by business segment on a comparable basis.

	Three Months Ended June 30		Six Months Ended June 30	
Millions of dollars	2001	2000	2001	2000
Revenues:				
Energy Services Group	$ 2,214	$ 1,615	$ 4,245	$ 3,038
Engineering and Construction Group	1,125	1,253	2,238	2,689
Total	$ 3,339	$ 2,868	$ 6,483	$ 5,727
Operating income:				
Energy Services Group	$ 267	$ 113	$ 467	$ 162
Engineering and Construction Group	25	30	43	79
General corporate	(20)	(17)	(40)	(34)
Total	$ 272	$ 126	$ 470	$ 207

Source: HALLIBURTON CO, 10-Q, August 09, 2001

Energy Services Group. The Energy Services Group provides a wide range of discrete services and products and integrated solutions to customers for the exploration, development, and production of oil and gas. The customers for this segment are major, national and independent oil and gas companies. This segment consists of:

- Halliburton Energy Services provides oilfield services and products including discrete products and services and integrated solutions for oil and gas exploration, development and production throughout the world. Products and services include pressure pumping equipment and services, logging and perforating, drilling systems and services, drilling fluids systems, drill bits, specialized completion and production equipment and services, well control, integrated solutions, and reservoir description,
- Landmark Graphics provides integrated exploration and production software information systems and professional services to the petroleum industry, and
- Other product service lines include surface/subsea operations and large integrated engineering, procurement, and construction projects containing both surface and sub-surface components. Surface/subsea operations provide construction, installation and servicing of subsea facilities; flexible pipe for offshore applications; pipeline services for offshore customers; pipecoating services; feasibility, conceptual and front-end engineering and design, project management, detailed engineering, maintenance, procurement, construction site management, commissioning, startup and debottlenecking of both onshore and offshore facilities.

Engineering and Construction Group. The Engineering and Construction Group provides engineering, procurement, construction, project management, and facilities operation and maintenance for oil and gas and other industrial and governmental customers. The Engineering and Construction Group, operating as Kellogg Brown & Root, includes the following five product lines:

- Onshore operations comprises engineering and construction activities, including liquefied natural gas, ammonia, crude oil refineries, and natural gas plants,
- Offshore operations includes specialty offshore deepwater engineering and marine technology and worldwide fabrication capabilities,
- Government operations provides operations, maintenance and logistics activities for government facilities and installations,
- Operations and maintenance provides services for private sector customers, primarily industrial, hydrocarbon and commercial applications, and
- Asia Pacific operations, based in Australia, provides civil engineering and consulting services.

Note 3. Acquisitions and Dispositions

Magic Earth acquisition. In April 2001, we signed a definitive agreement to acquire Magic Earth, Inc., a leading 3-D visualization and interpretation technology company with broad applications in the area of data mining. Once the transaction is completed, Magic Earth will become our wholly owned subsidiary and a part of the Energy Services Group. Under the agreement, Halliburton will issue stock valued at $100 million, subject to final purchase price adjustments, to acquire Magic Earth. The transaction is expected to be completed later this year after various regulatory and other approvals are received.

PGS Data Management acquisition. In March 2001, Landmark Graphics acquired the PGS Data Management division of Petroleum Geo-Services ASA (PGS) for $175 million, subject to a final working capital adjustment. Terms of the agreement also include a contract that calls for Landmark to provide, for a fee, strategic data management and distribution services to PGS for three years. We have preliminarily recorded goodwill of $155 million, subject to the final valuation of intangible assets and other costs. Goodwill, based on a 15 year life, will only be amortized through the end of 2001 in accordance with FASB Statement No. 142.

App. 101

USCA5 7725

SA501

In June 2001, Harbison-Walker informed Dresser that it was unable to pay a large number of asbestos claims settlements it had negotiated with plaintiffs. Harbison-Walker requested that Dresser provide it with financial assistance to pay these settlements. Since receiving its request, we have conducted an investigation of the status of the asbestos claims assumed by Harbison-Walker. We believe that at June 30, 2001, Harbison-Walker was defending approximately 112,000 open claims it assumed under the 1992 agreement, including approximately 35,000 new refractory related claims which were filed during the first half of this year, many of which name Dresser as a defendant based on its prior ownership of the refractory business. Based upon information we developed, including our own experience managing asbestos claims and our analysis of Harbison-Walker's claims management, we have estimated our exposure on these open claims. Harbison-Walker's average historical claim settlements have been significantly higher than we have experienced with our similar refractory claim settlements. In addition, Harbison-Walker appears to have entered into settlements of 47,000 to 52,000 additional claims for an aggregate amount that may exceed $320 million. Harbison-Walker has historically recovered more than 90% of their asbestos claim settlements through their insurance coverage. None of the above Harbison-Walker claims have been included in previous asbestos claims reported by Halliburton due to our reliance on Harbison-Walker's defense and indemnity obligations under the 1992 spin-off agreement.

Based on its request for assistance, we believe that Harbison-Walker does not have the financial ability to comply with its defense and indemnity requirements under the 1992 spin-off agreement. Dresser's discussions with some of the insurance carriers obligated to provide coverage for these claims indicate that it is likely that they will refuse to pay Harbison-Walker's existing settlements. In addition, Equitas and other London-based insurance carriers have notified Harbison-Walker and Dresser that they will attempt to impose new documentation requirements on reimbursement claims made on this insurance. The current coverage-in-place agreement that Dresser and Harbison-Walker have with these carriers contains specific but different documentation requirements. We believe that any new documentation requirements are inconsistent with the current coverage-in-place agreement and are unenforceable.

Based on our investigation, Dresser has decided that it will not provide financial assistance to Harbison-Walker to pay the settlements Harbison-Walker has negotiated but is unable to pay. Dresser has also decided that it will not relieve Harbison-Walker of its obligations under the 1992 agreement. We believe that Harbison-Walker is no longer able to provide and is not providing Dresser with an adequate defense and indemnity as required under the 1992 agreement. As a result, Dresser will separately and aggressively assert its own defense of those claims that name Dresser as a defendant, including any new claims.

On August 2, 2001, Harbison-Walker filed a lawsuit in the District Court of Jefferson County, Texas alleging that Dresser and Halliburton breached, among other things, provisions of the 1992 spin-off agreement and the coverage-in-place agreements as well as commercially disparaged Harbison-Walker and tortiously interfered with its contractual relationships. Harbison-Walker's lawsuit bases these allegations on the press releases issued by Halliburton on June 28, 2001 and July 25, 2001.

We believe that these allegations are without merit and will vigorously defend against them. On August 7, 2001, Dresser and Halliburton filed a Motion to Compel Arbitration in the Jefferson County action based on the arbitration provision contained in the 1992 spin-off agreement. In our motion, we asked the Court to dismiss Harbison-Walker's lawsuit and order the parties to arbitrate all of the disputes arising out of the interpretation and implementation of the spin-off agreement.

Also on August 7, 2001, Dresser filed a lawsuit, in the United States District Court for the Northern District of Texas, against Harbison-Walker's parent company, RHI AG, an Austrian corporation, Harbison-Walker's affiliates, and Dresser's insurance companies. In this lawsuit, Dresser alleges that:

- Harbison-Walker, in concert with its affiliates and agents, fraudulently billed Dresser's historic general liability insurers for asbestos-related costs that Harbison-Walker had yet to pay;
- Harbison, its affiliates and agents have violated federal mail fraud and money laundering statutes, and thus, have violated the Racketeer Influenced Corrupt Organizations Act, commonly referred to as a RICO action; and
- The actions of Harbison-Walker, its affiliates and agents constitute common law conversion and conspiracy.

Source: HALLIBURTON CO, 10-Q, August 09, 2001

App. 102

[illegible]

SA502

Finally, Dresser also seeks a declaratory judgment that the amounts these insurance companies improperly paid to Harbison-Walker in response to the fraudulent billings do not erode the insurance coverage available to Dresser for its asbestos-related liabilities.

Also on August 7, 2001, Dresser filed a comprehensive insurance coverage lawsuit, in the District Court of Dallas County, Texas, against its historic general liability insurers. Dresser seeks, among other relief, a declaratory judgment that Dresser is entitled to insurance coverage for all of its asbestos-related liabilities arising out of its pre-November 1, 1985 operations or the operations of its predecessors acquired prior to November 1, 1985. Dresser filed this lawsuit to further protect its insurance coverage asset in light of several developments including:

- Harbison-Walker's attempt to improperly access insurance coverage; and
- London-based insurers' lawsuits against other unrelated policyholders seeking to unilaterally and improperly modify existing coverage in place agreements.

Summary

Based on our analysis of the believed number of current claims pending against Harbison-Walker and our experience with our other asbestos claims, we recorded as discontinued operations in the 2001 second quarter an accrual of $93 million ($60 million, after tax) for potential liabilities for open and settled asbestos claims at June 30, 2001.

Discontinued Operations Asbestos Reserve Millions of dollars	June 30 2001
Harbison-Walker open claims liability	$ 576
Estimated insurance recoveries - Harbison-Walker	(518)
Harbison-Walker settled but not paid liability	33
Dresser Industries, Inc. claims on disposed businesses	14
Estimated insurance recoveries - Dresser Industries, Inc.	(12)
Asbestos claims in discontinued operations, net of insurance	$ 93

A summary of our reserves for all open asbestos claims and corresponding estimated insurance recoveries, including the above, is as follows:

Millions of dollars	June 30 2001	December 31 2000
Asbestos litigation claims	$ 699	$ 90
Estimated insurance recoveries:		
Highlands Insurance Company	(17)	(39)
Other insurance carriers	(558)	(12)
Insurance for asbestos litigation claims	(575)	(51)
Net liability for known open asbestos claims	$ 124	$ 29

The above are included in noncurrent assets and liabilities due to the extended time periods involved to settle claims.

In addition to the above, accounts receivable include amounts we expect to collect from Highlands Insurance Company of $20 million for payments we already have made on asbestos claims. If our appeal of the Chancery Court's ruling in the Highlands litigation is ultimately unsuccessful, we will be unable to collect this $20 million as well as the $17 million estimated recovery from Highlands. This may have a material adverse impact on the results of our operations and our financial position at that time.

> Asbestos litigation re-emerged as a concern for investors last week after oilfield services giant Halliburton Co. said a jury slapped one of its units with $30 million in damages ... [the verdict] spurred continued anxiety on Monday, driving down shares of a disparate group of other companies facing asbestos claims.

This Reuters News article mentions substantial stock price declines for various companies, including Sealed Air Corp., Georgia-Pacific Corp., Crown, Cork & Seal Co. and Viacom, Inc.[66] We, similarly, found that the stock price of these companies fell. The chart below shows the stock price decline from Thursday, December 6, 2001, the day before the verdict was announced, until Monday, December 10, 2001.

Price Decline of Other Asbestos Defendants
Following Halliburton's Verdicts Announcement

	Date	Sealed Air	Georgia-Pacific	CBS/Viacom	Crown Holdings
Thursday	12/6/2001	$23.45	$34.45	$37.36	$1.85
Friday	12/7/2001	21.15	29.65	35.52	1.85
Monday	12/10/2001	19.04	28.13	32.34	1.74
	Price Decline	19%	18%	13%	6%

INFORMATION TO BE INCLUDED IN REPORT

Item 5. Other Events

The registrant may, at its option, report under this item any events, with respect to which information is not otherwise called for by this form, that the registrant deems of importance to security holders.

Halliburton Company announced that on November 29, 2001, a Texas district court in Orange, Texas entered a judgment against its subsidiary, Dresser Industries, Inc., on a $65 million jury verdict rendered in September 2001 in favor of five plaintiffs following a trial of several weeks. Dresser believes that the trial court committed numerous errors, including the application of Alabama law and its evidentiary rulings during the trial. Additionally, the trial court denied Dresser the right to present evidence that the alleged illnesses of the plaintiffs were not caused by Dresser products, but instead could have been caused by the products of other companies which had previously settled with the plaintiffs. Dresser intends to appeal this judgment and believes that the trial evidence did not support the verdict and that its legal defenses will result in judgment on appeal in Dresser's favor.

The same district court also entered three additional judgments against Dresser in the aggregate amount of $35.7 million in favor of 100 other asbestos plaintiffs. These judgments related to an alleged breach of purported settlement agreements signed earlier this year by a New Orleans lawyer hired by Harbison-Walker Refractories Company, which had been defending Dresser pursuant to the agreement by which Harbison-Walker was spun-off by Dresser in 1992. These settlement agreements purportedly bind Harbison-Walker Refractories Company as the obligated party, not Dresser. Dresser intends to appeal these three judgments on the grounds that it was not a party to the settlement agreements and it did not authorize anyone to settle on its behalf. Dresser believes that these judgments are contrary to applicable law and that its appeal will be successful.

HALLIBURTON

1999 Press Releases

FOR IMMEDIATE RELEASE: October 4, 1999

HALLIBURTON TO SELL TWO JOINT VENTURES, ANNOUNCES EARNINGS OUTLOOK

Dallas, Texas - Halliburton Company (NYSE:HAL) announced today that its subsidiary Dresser Industries, Inc. (Dresser) has elected to sell its interests in two joint ventures to Ingersoll-Rand Company (NYSE:IR) for total cash consideration of approximately $1.1 billion. These sales will result in an after-tax gain of approximately $380 million, or $ .84 per diluted share, and the gain will be recognized in the 1999 fourth quarter. The elections have been made pursuant to the governing agreements of the Dresser-Rand (D-R) and the Ingersoll Dresser Pump (IDP) joint ventures. Currently, Dresser owns 51 percent of D-R and 49 percent of IDP, while Ingersoll-Rand owns the remaining interests in the joint ventures.

Based upon the company's analysis, advice from its independent auditors and consultation with the SEC, Halliburton has concluded that the sale of the joint venture interests will not adversely affect the pooling of interests method of accounting used for the Dresser merger in 1998.

In August 1999, Ingersoll-Rand notified Dresser of its offer to sell its interests in the two joint ventures and specified the prices at which it would sell such interests. Pursuant to the governing agreements, Dresser has 60 days in which to make two elections. In the case of D-R, Dresser is required to elect to purchase Ingersoll-Rand's interest in D-R or sell its D-R interest to Ingersoll-Rand. In the case of IDP, Dresser is required to elect to purchase Ingersoll-Rand's interest in IDP or sell its IDP interest to Ingersoll-Rand. In each sale, the price is adjusted for differences in the size of their respective ownership interests. Dresser has now formally notified Ingersoll-Rand of its election to sell its interests in both joint ventures to Ingersoll-Rand and to close the sales on December 30, 1999.

The selling price is approximately $595 million for Dresser's 51 percent of D-R and $515 million for its 49 percent of IDP. Simultaneous with the closings of these sales, Dresser will repay the joint ventures approximately $220 million of outstanding advances made to Dresser. Net of taxes and all related costs, these sales will result in a net cash inflow of approximately $630 million which will be used to repay short-term debt, significantly strengthening Halliburton's balance sheet, and for other general corporate purposes.

Dick Cheney, Halliburton Company's chief executive officer, said, "We wish to thank the employees of Dresser-Rand and Ingersoll Dresser Pump for their many years of contributions towards Dresser's success and for their exceptional efforts to make the best of recent difficult market conditions. However, we believe it is in the best interest of Halliburton's shareholders to take advantage of this opportunity to exit the D-R and IDP joint venture investments given the attractive prices offered by Ingersoll-Rand."

The Dresser Equipment Group business segment is now significantly under-performing Halliburton's expectations, primarily due to poor current and projected financial performance at D-R and at IDP. D-R is expected to report an

operating loss in the 1999 third quarter, and the entire Dresser Equipment Group business segment is now forecasting weaker operating results than previously expected in both the third and fourth quarters of 1999.

The lower than expected profits of the joint ventures and many of the other business units of the Dresser Equipment Group are significantly affecting the company's 1999 third quarter earnings. Also impacting results is a decline in the downstream Engineering and Construction business segment, offset by approximately $ 20 million of interest income from a tax refund. The third quarter earnings of the Energy Services Group segment will remain flat to slightly up compared to the 1999 second quarter due to continued low spending levels by the company's energy industry customers. As a result, the company expects that its 1999 third quarter earnings will be in the range of $.11 to $.13 per diluted share.

Halliburton Company, founded in 1919, is the world's largest provider of products and services to the petroleum and energy industries. The company serves its customers with a broad range of products and services through its Energy Services Group, Engineering and Construction Group and Dresser Equipment Group business segments. The company's World Wide Web site can be accessed at http://www.halliburton.com.

NOTE: In accordance with the Safe Harbor provisions of the Private Securities Litigation Reform Act of 1995, Halliburton Company cautions that statements in this press release which are forward looking and which provide other than historical information, involve risks and uncertainties that may impact the company's actual results of operations. Please see Halliburton's Form 10-Q for the quarter ended June 30, 1999 for a more complete discussion of such risk factors.

HALLIBURTON

2000 Press Releases

FOR IMMEDIATE RELEASE: October 24, 2000

HALLIBURTON RELEASES THIRD QUARTER EARNINGS, UP SIGNIFICANTLY OVER PRIOR YEAR AND PREVIOUS QUARTER

Dallas, TX - Halliburton Company (NYSE:HAL) reported today that 2000 third quarter net income was $157 million ($0.35 per share diluted), representing a 109 percent increase over the prior quarter, and a 171 percent increase compared to the third quarter of 1999.

Revenues from continuing operations were $3 billion, representing an increase of $156 million on a sequential basis. Operating income followed suit, increasing $122 million over the same period. Compared to the prior year's quarter, operating income increased $167 million on increased revenues.

Two nonrecurring items affected the third quarter. Operating results benefited from an $88 million pre-tax gain ($0.12 per share diluted, after tax) on the sale of marine vessels and were reduced by a $9 million pre-tax expense ($0.01 per share diluted, after tax) associated with the early retirement of the previous chairman of the Company. Without these items, operating income increased over 100 percent year-over-year and 34 percent sequentially. Net income excluding these items was $109 million ($0.24 cents per share diluted).

Dave Lesar, Halliburton's chairman of the board, president and chief executive officer, said, "I am very pleased with the Company's growth in earnings, which were driven by substantial operating improvements in our Energy Services Group. As activity levels within the oil and gas industry have continued to accelerate, we have increased our capacity utilization, especially in North America. Combined with the effects of stronger pricing of products and services within Halliburton Energy Services, we have been able to continue our strong performance that began earlier this year."

2000 Third Quarter Segment Results

The Energy Services Group business segment's 2000 third quarter revenues were $2 billion, representing a 19 percent increase year-over-year and a 7 percent increase sequentially. The Halliburton Energy Services business unit led the segment with a 31 percent quarterly increase in revenues year-over-year and a 9 percent increase sequentially.

Geographically, the Energy Services Group business segment's United States revenues increased 53 percent year-over-year and 20 percent sequentially. International revenues increased five percent year-over-year and were flat sequentially. In total, international revenues represented 63 percent of the segment's revenues for the quarter.

The Energy Services Group segment's 2000 third quarter operating income of $233 million increased $177 million from the year ago quarter and $126 million sequentially. Excluding the $88 million gain on the sale of marine vessels, operating income for the quarter increased 159 percent year-over-year and 36 percent sequentially. These improvements in operating income primarily resulted from higher capacity utilization and price improvements within Halliburton Energy Services, where incremental margins were 30 percent year-over-year

and 28 percent sequentially. Excluding the gain on the sale of marine vessels, Brown & Root Energy Services' operating income of $10 million was negatively impacted by continuing low capacity utilization and by delayed customer projects. Increased sales and profitability on software at Landmark Graphics contributed to the segment's improved operating income.

The Engineering and Construction Group business segment's revenues in the 2000 third quarter were $1 billion, a 3 percent increase sequentially but a 21 percent decline from the year ago quarter. Most of the decline was attributable to reduced customer spending associated with Kellogg Brown & Root's downstream petroleum industry business. Operating income from the Engineering and Construction Group in the 2000 third quarter was $41 million, up $5 million sequentially and flat compared to the year ago quarter.

Discontinued Operations

Earlier this year we announced plans to sell our Dresser Equipment Group's business units to sharpen focus on our core business activities. Therefore, such businesses are accounted for as discontinued operations. Net income from discontinued operations in the 2000 third quarter was $27 million ($0.06 per share diluted) compared to $20 million ($0.04 per share diluted) in the year ago quarter. Sale of the Group's business units is expected to be completed before the end of the first quarter of 2001.

Technology and Business Successes

During the last three months, Halliburton achieved a number of technology and business successes, including:

- Halliburton Company acquired a 15 percent equity position in Petroleum Place, Inc., a leading industry Internet company focused on the global oil and gas property acquisition and divestiture market. Landmark Graphics Corporation, a Halliburton Company, will form a strategic alliance with Petroleum Place to provide online access to relevant Landmark software for use in the acquisition and development process, and will participate in joint software development for Internet-based property evaluations.
- Halliburton Energy Services announced the introduction of DeepWater Flo-Stop® (DWFS) 5000 - a single liquid additive used to control hazardous shallow water flow zones while cementing in deepwater. The additive can be used with cement already on the rig; thus, eliminating the logistics, rig-time and bulk transfer problems generally associated with costly specialty blends.
- Baroid Drilling Fluids, a product-service line of Halliburton Energy Services, participated in drilling one of the world's most extreme inclination wells - at an angle of 164.7 degrees - offshore East Asia. Utilizing Baroid's PETROFREE drilling fluid system, the Operator was able to successfully drill the world record well while minimizing potential risks to the environment.
- Halliburton Energy Services entered into a strategic agreement with 4th Wave Imaging Corporation to offer 3D time-lapse vertical seismic profile services to oil and gas producing companies. The agreement brings together Halliburton's global leadership in providing reservoir management solutions with 4th Wave Imaging's industry recognized expertise in time-lapse 3D surface seismic data analysis and interpretation (commonly referred to as 4D seismic).
- Halliburton Energy Services introduced two new cementing unit designs that will integrate the proven pumping and mixing systems its customers have come to expect, with innovative safety and technologically-advanced features. As a result of the growing demand for the company's products and services, more than 60 new cementing units - consisting of the Elite™ model, along with the Precision™ model - will be manufactured and deployed throughout North America over the next 12 months.
- Halliburton Energy Services has been selected by Shell Petroleum Development Company of Nigeria Limited (SPDC) and its partners to provide cementing and drilling fluids services on Shell's EA Development offshore Nigeria. This 54-well project is the first major offshore oil and gas

development for SPDC in Nigeria and is expected to begin operations in April 2001. The contract is valued at approximately $50 million.

This is the same development for which, earlier this year, SPDC awarded Brown & Root Energy Services an engineering, procurement, installation and commission lump sum contract that includes fabrication of a mooring facility and one of the largest floating production, storage and offloading vessels built in the last five years. That contract is valued at approximately $300 million.

- Brown & Root Services has been awarded a contract by the Defense Threat Reduction Agency to provide integrated project management, integrated logistics support, and data management to eliminate Russian Inter-Continental Ballistic Missiles and their silos. The project, under the Strategic Arms Reduction Treaty, consists of a two-year base agreement with seven option years. The project has a maximum value of $283 million and is currently in the start-up phase.

Halliburton Company, founded in 1919, is the world's largest provider of products and services to the petroleum and energy industries. The company serves its customers with a broad range of products and services through its Energy Services Group and Engineering and Construction Group business segments.

NOTE: In accordance with the Safe Harbor provisions of the Private Securities Litigation Reform Act of 1995, Halliburton Company cautions that statements in this press release which are forward looking and which provide other than historical information involve risks and uncertainties that may impact the company's actual results of operations. HALLIBURTON ANNOUNCES NEW STRUCTURE AND ENGINEERING AND CONSTRUCTION CHARGES

DALLAS, Texas -- In its third quarter earnings conference call, Halliburton Company (NYSE:HAL) detailed its concerns regarding the poor near term market outlook for the downstream engineering and construction business and its decision to reorganize the engineering and construction business. A consolidating customer base, difficult relationships with certain customers, some financially stressed competitors and a fiercely competitive environment are all factors influencing the reorganization decision and affecting productivity and profitability. By way of contrast, Halliburton Company continues to experience very strong markets in its upstream energy services businesses, especially in North America.

Halliburton Company will operate two business segments in the future: the Halliburton Energy Services Group and the Engineering and Construction Group.

The Halliburton Energy Services Group will include Halliburton Energy Services, Landmark Graphics, large integrated projects that include both surface and sub-surface components, and the following businesses that were formally part of Brown & Root Energy Services - Halliburton Subsea, Wellstream, Production Services, Granherne, Bredero-Shaw joint venture and the EMC joint venture.

All engineering and construction activities will be consolidated under the Engineering and Construction Group. The upstream oil and gas engineering and construction, fabrication capabilities as well as the traditional engineering and construction business will be under Kellogg Brown & Root management. Individual brand identities will be maintained.

Current business conditions require us to focus on our core engineering and construction competencies of serving the energy, civil and government markets. Our goal is to deliver consistent, predictable, and profitable results. This will result in recording approximately $120 million after tax charges in the fourth quarter related to restructuring and charges on projects of the engineering and construction businesses.

-more-

Both Brown & Root Energy Services and Kellogg Brown & Root are impacted by the charges and reorganization.

The portion of the charges related to reorganization costs is expected to be approximately $25 million after tax and primarily relate to severance costs associated with a reduction in the number of senior management positions and costs to exit several facilities no longer required, while the remaining charges primarily relate to project specific matters.

During the quarter, several large fixed fee engineering and construction projects, including two projects where Kellogg Brown & Root participates as a member of a construction joint venture, incurred significant additional costs related to projected completion of the projects. Much of the additional costs relate to labor disturbances in Venezuela and West Africa that have significantly affected productivity on the projects. While claims will be made for a large portion of the additional costs, management does not believe that all the claims will be recovered. In addition, negotiations with customers regarding cost increases on seven other projects have not resulted in resolution of certain claims as originally anticipated.

Our goal for the engineering and construction business is to earn a 3 percent margin in 2001 and between 3-5 percent margin in the longer term given the expected market conditions. We believe this new structure will allow us to meet that goal. Our total backlog at the end of November 2000 was $9.7 billion. Approximately $6.5 billion relates to the backlog in the new Engineering and Construction Group businesses and we expect that backlog to be stronger at the end of 2001. We anticipate working off about sixty to sixty-five percent of that level of backlog during 2001.

Due to the ongoing strength of our upstream energy services businesses, fourth quarter 2000 earnings per share are expected to be between $0.25 and $0.27 per diluted share, including discontinued operations but excluding the items discussed above. "

Dave Lesar, Halliburton's chairman of the board, president and chief executive officer, said, "We are very disappointed that the high price oil and gas environment has not yet translated to increased spending by our customers on engineering and construction projects. The overwhelming majority of our projects are executed efficiently and profitably. We continue to identify ways to mitigate increased costs and aggressively negotiate claims resolution with our customers. This new structure will allow us to leverage our businesses more effectively as additional oil and gas engineering and construction project opportunities are planned by our customers.

"On a more positive note, we are very pleased with the continuing strong performance at Halliburton Energy Services, Landmark and Dresser

-more-

Equipment Group. Our efforts on selling the Dresser Equipment Group are proceeding with bids due this week. We plan to be in negotiations with leading bidders by early in January," Lesar concluded.

The Company also announced that it has now purchased in excess of twenty million shares of its stock under the previously announced stock repurchase plan.

Halliburton Company, founded in 1919, is the world's largest provider of products and services to the petroleum and energy industries. The company serves its customers with a broad range of products and services through its Energy Services Group and Engineering and Construction Group business segments. The company's web site can be accessed at www.halliburton.com.

NOTE: In accordance with the Safe Harbor provisions of the Private Securities Litigation Reform Act of 1995, Halliburton Company cautions that statements in this press release which are forward looking and which provide other than historical information involve risks and uncertainties that may impact the company's actual results of operations. HALLIBURTON

2001 Press Releases

FOR IMMEDIATE RELEASE: June 28, 2001

HARBISON-WALKER ASKS HALLIBURTON FOR ASSISTANCE

DALLAS, Texas - Halliburton Company (NYSE:HAL) today announced that Harbison-Walker Refractories Company ("Harbison"), formerly owned by a Halliburton subsidiary, Dresser Industries, Inc. ("Dresser"), has requested that Dresser provide Harbison with claims management and financial assistance for asbestos claims Harbison assumed when it was spun-off from Dresser in 1992.

Many of these Harbison claims are asserted in lawsuits that also name Dresser as a defendant and Harbison is, in effect, co-insured with Dresser under a substantial insurance program that covers these claims and other asbestos claims against Dresser. Consequently, Dresser has a substantial interest in their resolution and the most effective use of this insurance.

In 1967 Dresser acquired Harbison's refractory manufacturing business and operated it as a division. In 1992 the refractory business and other non-core Dresser businesses were placed in a new subsidiary, Indresco, Inc., and spun-off to Dresser's shareholders. Indresco's name was later changed to Harbison-Walker Refractories Company. Harbison is now a subsidiary of RHI AG, an Austrian company.

In conjunction with the 1992 spin-off, Dresser and Harbison entered an agreement which allocated between them responsibility for asbestos claims related to the refractory business. Dresser agreed to retain claims filed prior to the spin-off. Harbison agreed to assume claims filed after the spin-off and to indemnify and defend Dresser against those claims.

Halliburton is now investigating Harbison's asbestos claims, including the status of various completed and proposed settlements and, open unsettled claims, and the financial condition of Harbison and its affiliates. Based on information received, Halliburton believes that Harbison now has about 165,000 open claims of which approximately 52,000 are subject to various settlement negotiations or agreements. These claims have not been previously reported by Halliburton because of Harbison's agreement to assume full responsibility for these claims and to indemnify and defend Dresser against them.

If Halliburton determines that Harbison is not able to perform adequately its obligations under the assumption agreement and that it is in Halliburton's best interest to do so, Halliburton may take the primary role for management and resolution of Harbison's claims. A decision in this regard is expected in the next several weeks.

Based on the information it has developed to date and its own experience in managing asbestos claims, Halliburton believes that if such a decision is made it would require an additional reserve for estimated known claims at June 30, 2001, net of insurance recoveries, of approximately $50 to $60 million, after-tax. This reserve would be recorded as a discontinued operations expense and be reduced by the contributions Harbison is capable of making toward the resolution of these claims.

KBR Press Statements

As previously announced, Halliburton will report a gain on the sale of the DEG Business Segment of approximately $300 million after tax. This gain and any required expense associated with the asbestos issues above would be netted together and both be included in the total discontinued operations. Results from continuing operations will not be affected.

"This is an unexpected development", said Dave Lesar, Chairman, President and CEO of Halliburton. "Although Harbison reaffirmed its responsibility for these claims as recently as last year, it appears that it may be in our best interest to step in and protect our shareholders."

Halliburton Company, founded in 1919, is the world's largest provider of products and services to the petroleum and energy industries. The company serves its customers with a broad range of products and services through its Energy Services Group and Engineering and Construction Group business segments.

2001 Press Releases

FOR IMMEDIATE RELEASE: October 30, 2001

HALLIBURTON DISPUTES ASBESTOS CLAIMS

DALLAS, Texas - A jury in Holmes County, Miss., rendered a verdict on Friday, October 26, 2001, against three companies in an asbestos case in favor of six plaintiffs for a total of $150 million. Halliburton's subsidiary, Dresser Industries, Inc., was a defendant in two of the claims. Halliburton's share of the verdict is $21.25 million. The award was for compensatory damages only and the jury refused to award punitive damages. The other two companies were assessed the remainder of the damages.

Halliburton will file post trial motions and vigorously appeal if the verdict is not set aside. Halliburton has strong defenses in response to the plaintiffs' claims. For example, the Harbison-Walker products to which the plaintiffs claimed exposure simply did not exist. The only doctor to find a supposed asbestos-related condition was a doctor hired by plaintiffs' lawyers to screen potential clients for asbestos-related disease.

In addition to a complete absence of proof on key elements of the claims against Halliburton, there were serious irregularities in both the jury selection process and the determination of the venue of the court that heard the case. Halliburton believes the Mississippi appellate court will ultimately vindicate its position.

Halliburton, founded in 1919, is the world's largest provider of products and services to the petroleum and energy industries. The company serves its customers with a broad range of products and services through its Energy Services Group and Engineering and Construction Group business segments.

HALLIBURTON

2001 Press Releases

FOR IMMEDIATE RELEASE: December 7, 2001

HALLIBURTON COMMENTS ON ASBESTOS JUDGMENTS

DALLAS, Texas - This week Halliburton announced three adverse asbestos litigation results. Those announcements are set forth in full at the end of this press release. We would like to provide some background for those announcements to put them into context.

Our strategy in managing asbestos cases is to achieve settlement of valid claims for reasonable amounts. When we believe that settlement demands by plaintiffs are not reasonable we go to trial. This strategy has resulted in resolution of over 194,000 asbestos claims during the last 25 years for reasonable aggregate amounts. Our Form 10-Q quarterly report for the period ending on September 30, 2001 contains more information about our asbestos claims and the results of our claims management.

The verdicts and judgments we reported this week were significantly outside our past experience. During the last several months Dresser and Kellogg Brown & Root have achieved favorable results in a number of other asbestos lawsuits where Dresser and Kellogg Brown & Root have been found to have no liability or relatively small amounts of liability. We believe that our management of asbestos claims is reasonable and effective and, over time, produces better results than the strategies followed by some other asbestos defendants.

As we previously announced, we believe that the $65 million dollar judgment in the district court in Orange, Texas is based on serious error during the trial and that the trial evidence does not support the judgment. Separately the same district court judge rendered the $35.7 million of judgments against our subsidiary Dresser Industries, Inc. based on settlement agreements to which Dresser was not a party and did not authorize. We believe that both of these actions are contrary to applicable law and we will appeal both of them. If our appeals do not succeed, we have substantial insurance that we expect will pay most of these judgments.

Our previous trial experience in the Baltimore court has been substantially better. We have a good basis for an appeal of this verdict if judgment on the verdict is rendered, although we cannot be certain of the result of such appeal. In any event, if our appeals do not succeed we have substantial insurance that we expect will pay most of any verdict amount.

During the coming weeks and months we expect Dresser and Kellogg Brown & Root will be involved in a number of other asbestos claim trials in several states. We cannot predict the outcome in these trials but we are confident of our strategy. We will continue to provide timely material information about the results of those trials. We are managing asbestos claims aggressively. We will continue our current claim strategy and seek to minimize any adverse financial impact on our company to the maximum extent possible. Our businesses are strong and healthy and our financial disclosure is accurate and complete.

Halliburton management will hold a telephone conference on Monday, December 10, 2001 at 7:00 am (CST) to discuss these matters.

KBR Press Statements

If you plan to participate in the teleconference, please telephone (913) 981-5583 ten to fifteen minutes prior to starting time and refer to confirmation code 471264.

The following is a restatement of the information in the two Form 8-K filings we made earlier this week.

December 4, 2001
Halliburton announced that on November 29, 2001, a Texas district court in Orange, Texas entered a judgment against its subsidiary, Dresser Industries, Inc., on a $65 million jury verdict rendered in September 2001 in favor of five plaintiffs following a trial of several weeks. Dresser believes that the trial court committed numerous errors, including the application of Alabama law and its evidentiary rulings during the trial. Additionally, the trial court denied Dresser the right to present evidence that the alleged illnesses of the plaintiffs were not caused by Dresser products, but instead could have been caused by the products of other companies which had previously settled with the plaintiffs. Dresser intends to appeal this judgement and believes that the trial evidence did not support the verdict and that its legal defenses will result in judgment on appeal in Dresser's favor.

The same district court also entered three additional judgments against Dresser in the aggregate amount of $35.7 million in favor of 100 other asbestos plaintiffs. These judgments related to an alleged breach of purported settlement agreements signed earlier this year by a New Orleans lawyer hired by Harbison-Walker Refractories Company, which had been defending Dresser pursuant to the agreement by which Harbison-Walker was spun-off by Dresser in 1992. These settlement agreements purportedly bind Harbison-Walker Refractories Company as the obligated party, not Dresser. Dresser intends to appeal these three judgements on the grounds that it was not a party to the settlement agreements and it did not authorize anyone to settle on its behalf. Dresser believes that these judgments are contrary to applicable law and that its appeal will be successful.

December 7, 2001
Halliburton announces that on December 5, 2001, a jury in Baltimore, Maryland returned verdicts against its subsidiary, Dresser Industries, Inc., and other defendants following a trial of several weeks involving asbestos claims. Each of five plaintiffs alleged exposure to Harbison-Walker Refractories products. Dresser's portion of the verdicts totals $30 million. Dresser believes that the trial court committed numerous errors, and that the trial evidence did not support the verdicts. Dresser intends to challenge the verdicts by post trial motion and, if those motions are not successful, to pursue an appeal aggressively.

Halliburton, founded in 1919, is the world's largest provider of products and services to the petroleum and energy industries. The company serves its customers with a broad range of products and services through its Energy Services Group and Engineering and Construction Group business segments.

Editor's Note: In accordance with the Safe Harbor provisions of the Private Securities Litigation Reform Act of 1995, Halliburton cautions that statements in this press release which are forward looking and which provide other than historical information involve risks and uncertainties that may impact the company's actual results of operations. Please see Halliburton's Form 10 Q for the quarter ended September 30, 2001 for a more complete discussion of such risk factors.

FOR IMMEDIATE RELEASE: April 5, 2007

HALLIBURTON COMPLETES SEPARATION OF KBR

Oilfield Services Company Announces Final Results of KBR Exchange Offer

HOUSTON, Texas – Halliburton Company (NYSE: HAL) today announced that it has completed the final separation of KBR Inc. (NYSE: KBR). The two companies now are separate and independent of each other.

"This is a major event for Halliburton, especially its dedicated employees, loyal customers and the shareholders," said Dave Lesar, Chairman, President and Chief Executive Officer, Halliburton. "As a pure oilfield services company, Halliburton now can focus on the global growth opportunities in its core energy services business."

Halliburton announced its plans in January 2005 to ultimately separate the KBR subsidiary. An initial public offering of KBR common stock was completed in November 2006.

"We wish KBR and its employees well as they move forward as an independent company," added Lesar.

All of the government services and engineering and construction businesses will remain with KBR.

The exchange offer expired at 12:00 midnight, New York City time, on April 2, 2007. Under the terms of the exchange offer, Halliburton has accepted 85,273,184 shares of Halliburton common stock in exchange for the 135,627,000 shares of KBR common stock held by Halliburton. Each share of Halliburton common stock accepted for exchange by Halliburton is being exchanged for 1.5905 shares of KBR common stock.

Because the exchange offer was oversubscribed, Halliburton accepted tendered shares on a pro rata basis in proportion to the number of shares tendered. Stockholders who owned less than 100 shares of Halliburton common stock, or an "odd-lot", who validly tendered all of their shares, were permitted to elect not to be subject to proration, in accordance with the terms of the exchange offer. All shares tendered by eligible electing odd-lot stockholders have been accepted. The final proration factor of 40.651959% was applied to all other tendered shares of Halliburton common stock to determine the number of such shares that would be accepted. Shares of Halliburton common stock tendered but not accepted for exchange will be credited promptly to the tendering holder's account in book-entry form.

Based on the final count by the exchange agent, Mellon Investors Services LLC, the results of the exchange offer are as follows:

Total number of shares of Halliburton common stock tendered	209,441,458
Shares tendered that were subject to proration	209,220,510
"Odd-lot" shares tendered that were not subject to proration	220,948
Total number of shares of Halliburton common stock accepted	85,273,184

Shares of KBR common stock distributed in exchange for accepted shares of Halliburton common stock will be credited promptly to the tendering holder's account in book-entry form by the exchange agent. Under the terms of the exchange offer, no fractional shares of KBR common stock will be distributed. Instead, fractional shares will be aggregated and sold, and the net cash proceeds of such sale will be distributed promptly by the exchange agent to tendering stockholders in accordance with their fractional interests in the shares sold.

Credit Suisse Securities (USA) LLC and Goldman, Sachs & Co. served as the dealer managers for the exchange offer.

Founded in 1919, Halliburton is one of the world's largest providers of products and services to the energy industry. With more than 45,000 employees in nearly 70 countries, the company serves the upstream oil and gas industry throughout the lifecycle of the reservoir – from locating hydrocarbons and managing geological data, to drilling and formation evaluation, well construction and completion, and optimizing production through the life of the field.

KBR is a global engineering, construction and services company supporting the energy, petrochemicals, government services and civil infrastructure sectors. KBR offers a wide range of services through its Energy and Chemicals (E&C) and Government and Infrastructure

usiness segments.

Important Information Regarding the Exchange Offer

The terms and conditions of the exchange offer are more fully described in a Prospectus-Offer to Exchange included in the Registration Statement on Form S-4 filed by KBR with the SEC and a Schedule TO filed by Halliburton with the SEC, each as amended to date. The Prospectus-Offer to Exchange contains important information about the exchange offer and related matters. You are able to obtain a free copy of the Prospectus-Offer to Exchange and other related documents filed with the SEC by Halliburton and KBR at the SEC's web site at www.sec.gov.

Forward-Looking Statements

Information in this communication contains forward-looking statements, which are based on the current plans and expectations of management and are subject to certain risks and uncertainties that could cause actual results to differ materially from historical results or those anticipated. A list of factors that could cause actual results to differ materially from those expressed in, or underlying, those forward-looking statements is detailed in the filings of Halliburton and KBR with the SEC, such as annual and quarterly reports and the Prospectus-Offer to Exchange. Neither Halliburton nor KBR assume any obligation to update or revise these forward-looking statements to reflect new events or circumstances.

HEADLINE: Halliburton Sells Stakes In Joint Ventures For $1.1 Billion

BODY:

DALLAS -(Dow Jones)- Oil-services company Halliburton Co. Monday said its Dresser Industries Inc. unit agreed to sell its interests in two joint ventures to Ingersoll-Rand Co. for about $1.1 billion in cash.

Ingersoll-Rand (IR), an industrial-equipment maker, has been moving to unwind its involvement in the two joint ventures, and indicated in early August that if it bought the two ventures, it would seek a purchaser.

Woodcliff, N.J.-based Ingersoll-Rand had said that the joint-venture companies, which make compressors and pumps, don't fit its current strategy, adding that it would use proceeds from a sale to acquire high-growth businesses.

Dresser Industries will sell its 51% interest in Dresser Rand for $595 million, and its 49% interest in Ingersoll Dresser Pump for $515 million, Halliburton said. Those transactions are expected to close Dec. 30.

Analysts were mildly pleased with Halliburton's (HAL) decision to sell its interests in the two joint ventures to Ingersoll-Rand.

Geoff Kieburtz, an analyst with Salomon Smith Barney, called Monday's announcement a "modest positive" for the Dallas oil-services company. "It resolves an uncertainty that would have otherwise been there," he said.

The attractive valuation that Ingersoll-Rand put on the assets was "a principal factor" that led Halliburton to sell its interests, Halliburton told Dow Jones.

Kieburtz said Halliburton executives told analysts in an invitation-only conference call that it moved forward with the deal after the Securities and Exchange Commission said the sale would not put into jeopardy certain tax benefits from Halliburton's September 1998 acquisition of Dresser Industries.

After taxes, other costs and repayment of a $220 million advance Halliburton received from the joint ventures, Halliburton will come away from the transaction with about $630 million. That money will be used to repay short-term debt and for "other general corporate purposes," Halliburton said.

Halliburton also said it expects to post earnings below estimates because of lower-than-expected profits from the Dresser-Rand and Ingersoll Dresser Pump ventures and other units, which are significantly affecting its 1999 third quarter earnings.

Halliburton expects to report earnings of 11 cents to 13 cents a diluted share for the third quarter. The mean estimate of analysts surveyed by First Call/Thomson Financial was for earnings of 19 cents a share. Halliburton lost $527 million, or $1.20 a share, including charges, in the year-ago period.

Halliburton also expects to record a gain of $380 million, or 84 cents a diluted share, in the fourth quarter on the sale of the ventures.

The mean estimate of analysts surveyed by First Call/Thomson Financial was for fourth-quarter earnings of 25 cents a share. Halliburton earned $65.7 million, or 15 cents a diluted and basic share, on charges in the year-earlier quarter. Revenue was $4.29 billion.

Halliburton said that a decline in its downstream engineering and construction business segment will also hurt its third-quarter results. However, Halliburton said the decline at the engineering segment was offset by $20 million in interest income from a tax refund.

Halliburton also said the third-quarter earnings of its Energy Services Group segment will remain flat to slightly up, compared with the 1999 second quarter, due to continued low spending by its energy customers.

Halliburton, which reported revenue of $4.22 billion in the year-ago third quarter, provides products and services to the petroleum and energy industries. The company restated its year-ago third quarter figures to reflect the acquisition of Dresser Industries in September 1998.

* represents change in estimates

Following a conversation with the company this morning, we are reducing our fourth quarter 1999 and 2000 EPS estimates.

For the fourth quarter, we are trimming our estimate by $0.02 to $0.14 from $0.16 to reflect lower oilfield services profits. Specifically, we have reduced our operating profit estimate in the Energy Services segment by $8 million to $72 million (compared with $56 million in the third quarter and $212 million in the year-ago period). While the company provided little earnings guidance, it did suggest that any variance to consensus estimates for the quarter likely would not be more than a couple of pennies. That said, the company is more comfortable being on the conservative side, although it noted that it has not yet seen figures for December. Our fourth-quarter 1999 EPS estimate is modestly below the $0.16 consensus mean.

For 2000, we are reducing our EPS projection to $0.90 from $1.10 as we are now electing to use more conservative forecasts to reflect the lower base point in the fourth quarter for Energy Serviecs and lower profit expecations in Engineering & Construction. Specifically, we are reducing operating profit estimates meaningfully for the Energy Services segment ($95 million, or $0.13 per share) and Engineering & Construction ($40 million, or $0.06 per share); we are trimming our Dresser Equipment estimate by $4 million or $0.01 per share. In the Energy Services segment, we are reducing our revenue estimate to $7.55 billion from $7.75 billion (compared with $6.9 billion estimated for 1999) and our operating profit estimate to $495 million from $590 million (compared with $234 million estimated for 1999). In the Engineering & Construction segment, we are reducing our revenue estimate to $5,475 million from $5,525 million (compared with $5,453 million estimated for 1999), and operating profit estimates to $180 million from $220 million (compared with $203 million estimated for 1999). In the Dresser Equipment segment, we are maintaining our revenue estimate at $1.45 billion but trimming our operating profit

estimate to $132 million from $136 million. Our 2000 EPS estimate is 19% below the current consensus mean of $1.11 per share, but in line with recent estimate reductions to the $0.85 to $1.00 range.

For 2001, we are maintaining EPS forecast at $1.75, which essentially matches the $1.74 consensus average.

Despite the estimate reductions, we remain positive on the industry recovery under way and Halliburton's earnings prospects through 2001. Consequently, we are reiterating our Buy/Buy ratings on the shares.

[HI Company Description:]Halliburton Company is a major provider of products and services to the petroleum and energy industris. In 1998, Halliburton's core Energy Services Group accounted for 52% of the company's total revenue and 67% of operating income (before special charges). Its other core group-Engineering and Construction-represented 32% of total revenue and 16% of operating income. The Dresser Equipment Group, which was acquired with Dresser Industries, comprised 16% of revenue and 17% of operating income. In 1998, 85% of the company's revenues were derived from the energy industry versus 84% in 1997 and 81% in 1996.

Halliburton Co.

Weak E&C Outlook Prompts Restructuring; Reducing Estimates

Investment Conclusion

- Halliburton reported 3Q00 EPS before extraordinary items of $0.24 vs $0.13 a year ago. This was a penny below our estimate but one cent above consensus. In the conference call, management highlighted plans for a significant restructuring of its E&C business and sharply lower earnings for 4Q00 and 2001 due to weakness in this business. We are reducing our 4Q00, 2000 and 2001 EPS estimates to $0.25, $0.77, and $1.50, respectively, from our prior estimates of $0.34, $0.87 and $1.71. Our earnings estimates include the Dresser Equipment division, which is to be sold. This division generates about $0.05 per share per quarter in earnings. Adjusted for the elimination of the DEQ earnings, our pro forma EPS estimates for 2000 and 2001 are $0.56 and $1.28, respectively.

- We are maintaining our Buy rating but reducing our price target to $50 from $56. We anticipate much market confusion due to the uncertainty about future earnings, the valuation of the stock and what Halliburton may look like in the future. We will be revisiting all of these issues, including our EPS estimates and price target, over the near term. Our basic conclusion is that the stock price can move higher over the next 12 months given the strength of the oilfield service industry recovery, especially internationally where Halliburton derives 64% of its business. The stock price may go lower first, however.

- The shock in the conference call was management's statement that, given the outlook for customer spending in the shallow water marine construction market and the downstream E&C business, it is not sure that Halliburton has the critical mass to generate consistent and predictable profitability and profit growth from these sectors. Management believes the stock is being punished for the lack of this predictability. Therefore, it will look to a significant restructuring of these businesses with an eye to achieving this goal during 2001. We could envision a

Company Description:
Halliburton Co. is a diversified energy services, engineering and construction and maintenance company.

00-10302 © 2000

CIBC World Markets Inc., P.O. Box 500, 161 Bay Street, BCE Place, Toronto, Canada M5J 2S8 • (416) 594-7000
CIBC World Markets Corp., One World Financial Center, New York, NY 10281 • (212) 667-7000 (800) 999-6726

substantial shrinking of these operations as they are presently constituted. In the end, the company should produce better returns on capital that should produce an improved valuation. The issue is how long it will take to accomplish this goal and what the near-term costs are.

- Management believes it must evolve into a more profitable and more consistent earnings performer in order to achieve a more proper stock market valuation. They plan to aggressively reinstate their stock repurchase plan as soon as their earnings quiet period is complete. This is both a statement of conviction about the long-term value of Halliburton and short-term to support the share price.

- Management also addressed Halliburton's potential exposure to asbestos claims. They stated that in their 3Q00 10-Q filing they will update their prior disclosure. The update will reflect nominal changes to their financial exposure. They believe this is an issue that is not growing for them, in contrast to other companies. Importantly, since they generated $88 million of pre-tax gains that could have been used to further strengthen their reserves, they elected not to, which speaks to their confidence that this is not a material issue.

- The HES oilfield service businesses turned in a stellar quarter with revenue up 31% year/year and 9% sequentially. Operating income advanced over 20% in all product lines except completions and incremental margins were 30%. The pressure pumping business generated 40% incremental margins. Domestically, this business unit is essentially at maximum capacity. Internationally, activity is just beginning to pick up. This business group will continue to carry the load for Halliburton's earnings in 2001.

- The E&C business has two division, KBR and B&R Services. This latter unit performs government work and is generally a consistent revenue and operating income performer. The problem is in the KBR business that engineers and builds major upstream and downstream energy facilities. This business is at the trough of its cycle and there is little work that can be secured in 4Q00 that would begin to impact earnings before 2002. Thus, this business will have to live off its backlog which currently is slightly over $6 billion. We estimate it will complete about half that backlog next year, but at sharply reduced profit margins due to the present overhead designed to support substantially more work than will be done.

- Halliburton plans to re-consolidate all its E&C businesses which includes the BRES division within the Energy Service Group. BRES is essentially two businesses, deepwater field development and shallow water marine construction. Both businesses are suffering. The deepwater business is at about breakeven, but management is confident about the future upturn in this market and feels it is well positioned to participate in its long-term growth. The shallow water marine construction business is hurting and shows little signs of recovery, at least as presently structured under BRES. By re-consolidating all these businesses under a new management structure, costs can be addressed and a new business model may evolve.

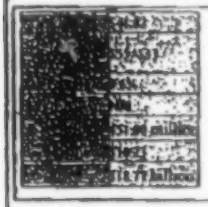
HALLIBURTON REPORTS; ANNOUNCES MAJOR RESTRUCTURING INITIATIVE

- Halliburton reported 3Q00 EPS of $0.24, excluding gains, slightly more than expectations.
- More interestingly, the company announced a major restructuring of its Engineering and Construction Group which continues to show disappointing results.
- The expected increase in international activity is materializing at a much slower rate than originally anticipated.
- Investor concerns of asbestos liabilities may dampen investor's interest in the stock until the ultimate outcome becomes more clear.



Dec/1999A		$0.61	62.1x
Dec/2000E		$0.75	52.7x
Dec/2001E	$1.51	$1.40	29.3x
2000 Q4	$0.25	$0.37	

After the market close, Halliburton announced third-quarter earnings, excluding gains, of $0.24, slightly more than expectations. While the Energy Services Group (ESG) posted solid results, primarily due to gains across all product lines in the Halliburton Energy Services division, we found the overall outlook to be worse than expected and, as a result, expect the stock to exhibit weakness through the remainder of the year.

The big surprise of the conference call was the announced restructuring of the Engineering and Construction Group (ECG). This group has been struggling for several quarters, primarily due to reduced customer spending in the Kellogg Brown & Root downstream petroleum business. Revenues were down 30% in the quarter and are not expected to recover until late in 2001 and into 2002. New downstream construction has been hampered by reduced spending by the majors following their recent mergers. The recently announced merger between Texaco and Chevron is likely to continue this trend.

As a result, management is rethinking its strategy for its ECG business. As part of the restructuring process, all of the ECG businesses will be consolidated under KBR in order to better facilitate cost reductions and re-alignment of the business. Halliburton realized an $88 million gain from the sale of marine assets and stated that it would be willing to sell additional assets in order to capture value from from this group. There will be increased severance costs and other restructuring charges that management hopes to offset with these asset sales. We believe that the timing of the charges and gains from asset sales may differ over the next several quarters, leading to erratic earnings from this group. During this restructuring, Halliburton will be evaluating whether they have the critical mass to deliver consistent, predictable returns in the ECG business over the long term.

We were also concerned that the expected increase in revenues from international markets continues to be weaker than expected. In the ESG, international revenues were flat sequentially and accounted for only 64% of the total revenue. International activity has been slowed by decreased spending by the majors, a trend that does not appear likely to reverse until 2001 at the earliest. We do, however, expect international activity to accelerate at a faster pace in 2001, which should benefit the HES group which typically derives approximately 70% of its revenues internationally.

Recently, there have been increased concerns about Halliburton's exposure to asbestos liabilities related to construction projects by KBR and Dresser Industries. Currently the company has accrued liabilities of only $75 million related to the claims. While management admits the size of the settlements has increased, they do not believe it will have any adverse material impact. However, given the recent massive settlement associated with asbestos litigation, we believe investor's concerns regarding these liabilities could hamper the stock's performance until the ultimate outcome becomes more clear.

The divestiture of the Dresser Equipment Group (DEG) is still expected to be completed by the end of the fourth quarter or early in 2001. DEG contributed EPS of $0.06 in the quarter. We believe it could take several quarters to reinvest the proceeds in a manner that replaces the earnings of the DEG.

We are reducing our fourth-quarter estimate to $0.27 from $0.29 and our FY2001 estimate to $1.42 from $1.57 to reflect the increasing weakness in the engineering and construction business and the slower-than-expected increase in international activity.

Stock Opinion:

We applaud the company's attempt to improve the results of the ECG and believe that the ESG is well positioned to benefit from the continued oilfield services cyclical recovery with strong market positions in several products/services segments. However, we believe there are too many uncertainties regarding the recovery in the non-oilfield service businesses. We recommend investor's focus on pure-play oilfield service stocks that are more highly leveraged to the continued cyclical recovery. We continue to rate the stock Neutral.

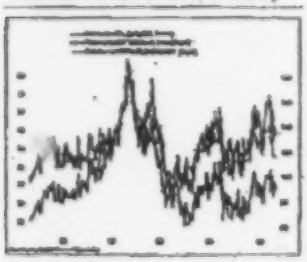
Big Changes Underway in E&C

STRONG BUY	
Price (October 24, 2000):	$41.63
Price Target:	$65
52-Week Range:	$55.19 - 33.44

WHAT'S CHANGED	
Earnings (2000):	*From $0.82 to $0.79*
Earnings (2001):	*From $1.88 to $1.50*

- **Third quarter EPS above expectations.**
  Core oilfield service performance was quite solid. This segment has real momentum moving into 2001.
- **Management focussing on improving valuation. Expect meaningful change.**
  A comprehensive strategic assessment of the company's underperforming E&C businesses is underway. Near term, these businesses will earn less than we had previously forecasted.
- **We lowered our 2001 EPS estimate...**
  Largely to reflect a very sluggish E&C market. Our estimate for 2001 is now a $1.50/share.
- **Management is a buyer of the stock at current levels.**
  Senior management suggested that it intends to buy back shares aggressively at current levels.

Price: Abs. and Rel. To Market & Industry



Company Description

Halliburton provides products, services, and integrated solutions for oil and gas exploration, development, and production. Capabilities range from the initial evaluation of producing formations to drilling, completion, production enhancement, and well maintenance.

Big Changes Underway in E&C

Third Quarter Was Solid...
Halliburton (HAL) reported third quarter 2000 operating EPS of $0.24, slightly ahead of our $0.22 estimate, and a penny better than the consensus. Revenues and operating profits by segment were generally in-line with our estimates, with total revenues and operating profits modestly better than our overall expectations. We present a detailed comparison of actual 3Q results versus our expectations and results from 2Q in Exhibit 3 at the end of this note.

But the Real Story Involves the Future of E&C...
The real story at Halliburton is not the company's current or near-term earnings profile, but rather the significant restructuring of its three major Engineering & Construction (E&C) businesses that is now underway. In summary, senior management, as headed by new CEO Dave Lesar, is in the process of completing a comprehensive strategic assessment of the company's entire E&C business segment.

Management's hunch is that the poor performance and mediocre intermediate term outlook for its overall E&C businesses has been and will continue to be detrimental to the company's valuation in the marketplace. We candidly support this exercise.

Earnings Outlook Remains Uncertain
The profit contribution from the company's three E&C segments will likely decline meaningfully in 2001 versus 2000, considerably more than we have previously forecasted. This is especially troubling from the context of valuation because it distracts investors from the impressive improvements that are underway within the company's core oilfield service operations. As discussed in more detail below, these operations represent most of the company's value.

In terms of assessing the company's earnings outlook for 2001, 2002 and even peak of cycle, several assumptions must be made including: (1) the amount of stock that the company will repurchase and the price paid for the shares on average, (2) the net proceeds received from the company's ongoing divestitures of its DEG assets, (3) the underlying consolidation benefits of the soon-to-be-restructured E&C businesses, and (5) the net proceeds associated with any E&C divestitures.

For now, our revised 2001 earnings outlook contemplates that the company: (1) divests of the DEG assets, (2) buys back roughly 20 million shares of stock (roughly one-half of its current authorization), and (3) generates E&C earnings that are roughly one half of our prior expectations. In such a scenario, the company would probably earn roughly $1.50/share, versus our prior outlook of $1.86/share.

In truth, what really happens over the course of the next year will be substantially different than what we have outlined above. The company intends to provide some clarity with respect to its E&C strategies over the next couple of months. Our guess is that the cost savings associated with the restructuring will be meaningful, the company will buy back more shares (and will possibly expand its current authorization) and selective, but significant, divestitures will take place in the E&C segment.

Sum of the Parts Valuation
The relative lack of clarity in the company's intermediate term earnings profile will certainly prompt investors to question the company's valuation. In order to answer the question "what should HAL trade for in the current market" we have performed a very straightforward analysis. We have basically broken the company up into two pieces: (1) Core Oilfield Services (OFS), which includes Halliburton Energy Services (HES) and Landmark Graphics (LMRK); and (2) everything else. "Everything else" includes: Brown and Root Energy Services (BRES), the company's offshore construction business, Kellogg Brown & Root (KBR) and Brown & Root Services (BRS) - which together, make up the company's global E&C operations - and the Dresser Equipment Group (DEG) businesses, which are now in the process of being sold.

Based on our current estimate of a 2001 EBITDA contribution of $1.4 billion from HES and LMRK, and using the current EBITDA multiple range from a comparable group which includes SLB, BJS, CAM and SII, we believe that the company's core oilfield services business accounts for between 75% and 98% of HAL's total market capitalization (see Exhibit 1). By implication, the current market cap of HAL implies that "everything else" (the E&C business, DEG and BRES) have an aggregate value of between $400 million and $4.6 billion. For reference, if we were to apply the SLB multiple to HAL's

Please refer to important disclosures at the end of this report.

core HES/Landmark profits, the implied value of "everything else" would be meaningfully negative.

Exhibit 1
Sum of the Parts Valuation

$ in millions	2002E EBITDA	6/5 EBITDA Mult Low	6/5 EBITDA Mult High	Core OFS Value Low	Core OFS Value High
HES & LMRK	$1,000	11.0x	14.0x	$15,400	$19,600
HAL Net Debt				(1,500)	(1,500)
Implied Equity Value Of HES & LMRK				$13,900	$18,100
HAL Market Cap.				$18,523	$18,523
Implied Equity Value Of E&C, BRES & DEG				$4,623	$423

Source: Morgan Stanley Dean Witter Research.

In Summary

In summary, we would make several points. First, the intermediate term earnings outlook for HAL is murky due largely reduced expectations for core profitability in its E&C business, uncertainty with respect to the timing, structure and underlying cost benefits of the ongoing E&C restructuring and the timing and magnitude of share repurchases. Second, based on a very realistic sum of the parts valuation assessment, the stock appears to be well supported in the $40/share range, especially given that management intends to "aggressively" repurchase shares at or around current trading levels. Finally, HAL's core oilfield service segments are performing quite well. These operations represent the vast majority of the company's overall enterprise value.

While we will quickly concede that we have been caught somewhat off guard with respect to 2001 profit expectations in the company's three major E&C segments, we will also highlight that the stock has declined significantly in recent weeks. Most importantly, we are not inclined to alter our peak earnings assessment of $3.25/share for the company at this time. On this basis, we believe the stock remains undervalued. Our rating remains Strong Buy.

RESEARCH NOTE

October 25, 2000

Halliburton Co
(HAL-$41.63)

Rating: Neutral

Halliburton: EPS In Line but Future Outlook Worsening in E&C Businesses

KEY POINTS

- Halliburton reported EPS from continuing operations of $0.18 for 3Q:00. EPS from continuing operations excludes $0.06 in EPS from discontinued operations and $0.11 of net gains on asset sales and one-time charges.
- The Halliburton Energy Services (HES) segment had a strong performance in the quarter as revenues grew 33% year-year and 8.5% sequentially. Operating income for HES rose over 300% year-year and 33% sequentially.
- Landmarks also continued to post strong improvements in revenues and earnings as software sales continue to rise and margins expand due to this positive mix shift.
- As strong as the results continue to get in the HES segment and at Landmark, business is deteriorating rapidly in Halliburton's engineering & construction businesses.
- The diminishing performance of the E&C businesses leads us to sharply curtail our earnings expectations for these businesses in 4Q:00 and 2001.
- More importantly, HAL management is undertaking an aggressive restructuring of its E&C businesses by recombining Brown & Root Energy Services with Kellogg Brown & Root and Brown & Root Services in an attempt to reduce costs and perhaps improve the long-term competitiveness of this business.
- We think that management is correct in restructuring this business, but we also believe that it should go one step further and spin-off these businesses shortly thereafter.
- While a spin-off might have had a negative impact when its earnings contribution was higher due to historically lower valuations for E&C companies, the minimal near-term earnings has already diminished the value of the E&C business to HAL shareholders. At this point, we think it is better for investors see this company in separate pieces.
- We are lowering our price target for HAL to $48 from $56 to reflect a lower estimated "normalized" return on capital and as well as a higher discount rate and lower target multiple. Our rating remains Neutral as the stock lacks a positive catalyst.

Halliburton, through subsidiaries, provides services and products for the exploration, development and production segments of the petroleum industry; and provides engineering, construction, project management, facilities operation and maintenance for industrial and governmental customers.

Earnings exclude all extraordinary and one-time gains and losses.

THIRD QUARTER EARNINGS ARE SOLID AT HES

Halliburton had slightly better than expected earnings from continuing operations during the third quarter. The company benefited from higher operating earnings in the Energy Services (ESG) segment largely due to strong performance in the Halliburton Energy Service (HES) segment as well as at Landmark Graphics. Third quarter results were also better than expected from the downstream E&C operations of Kellogg Brown & Root (KBR) and Brown & Root Services (BRS), while Brown & Root Energy Services (BRES) performed worse than expected. The net effect was still a disappointment from E&C operations continuing a trend that has been in place for several quarters.

HES revenues grew strongly in the quarter, rising 33% and operating income surged over 300% versus a year ago. We estimate that operating margins in this unit were 9.4% versus 2.9% a year ago and 7.7% in the last quarter. The strength of the HES segment is largely the result of strong growth of pressure pumping revenues and earnings. Pressure pumping represented about 45% of HES revenues and in North America had revenue growth of 40% year-year. Pricing continues to be very favorable in the pumping industry as record gas drilling levels have strained industry capacity. HES revenues and earnings are also benefiting from improvements in logging, drilling fluids and drill bits as well.

E&C OPERATIONS WEAKENING

BRES revenues were essentially flat year-year and quarter-quarter, but its operating margins dropped precipitously excluding the impact of an $88 million extraordinary gain from the sale of marine assets during the quarter. The offshore engineering and construction market continues to be quite weak and BRES is not building backlog outside of a select number of deepwater projects. As a result, BRES is struggling to make money with any consistency and it now appears that the segment will only be breakeven in the fourth quarter. Management indicates that BRES will also be no better than breakeven for 2001, which is well below our previous forecast.

While KBR reported higher operating earnings in the quarter than we had forecast, the outlook is nearly as bleak for this division as it is for BRES. Due to continued delays in capital investment in downstream energy projects, KBR is not building backlog and replacing its revenues, therefore the visibility of earnings is diminishing.

CUTTING ESTIMATES FOR 4Q:00 AND 2001

Due to Halliburton's exposure to the weakening outlook for upstream and downstream engineering and construction projects (excluding deepwater) the company's earnings outlook is diminishing. This is particularly disappointing since the earnings outlook at nearly all of its peers is improving at this point in the cycle. We are reducing our 4Q:00 EPS estimate to $0.20 from $0.22 and our 2001 estimate drops more sharply to $1.06 from $1.31. Several months ago, we had adjusted our HAL estimates to reflect the worsening E&C outlook, but this entire differential had been offset by improvements in Energy Service earnings. However, this reduction in E&C estimates overwhelms a modest increase in our Energy Service earnings. On a combined basis (BRES, KBR, and BRS) earnings are being revised sharply downward to about $70 million in 2001 from $300 million.

WEAKENING E&C PROMPT RESTRUCTURING

After three years of significantly diminished E&C performance at HAL, management is finally taking more radical restructuring steps within its E&C businesses. The company announced plans to recombine BRES with KBR and BRS (BRES was separated out several years ago) in an attempt to significantly reduce the cost structure within the E&C operations and perhaps bring operating and technical synergies to this business. While management declined to give estimates of cost saving potential, we would be surprised if the company could not find $100 million of savings. The restructuring plan will not just include recombining operations, but also shedding additional assets. For example, HAL could try to shed its interest in a pipelaying joint venture with Saipem or its small SubSea International division to further reduce the capital and asset intensity of this business. Management indicated that it should be able to provide more details on the savings and costs associated with the restructuring in December.

In our opinion, the restructuring of the E&C business is a positive, but we think that management should further consider spinning this business off to shareholders, especially now that its imputed value within HAL has diminished significantly. Previously, we believe that investors have not differentiated between the earnings contribution from ESG or E&C in terms of HAL's multiple. E&C earnings and cash flow have tended to be valued at the same multiple as ESG. However, given the troubles, we believe that this will be more common and since the current net contribution is so small, it would make sense to bite the bullet now rather than later. Furthermore, investors are likely to be pleased if HAL were to become a pure play upstream oilfield services company.

INVESTMENT CONCLUSION

We have been concerned about the weakening impact of E&C on HAL's earnings and valuation for some time and this has been one of the reasons behind our Neutral rating on the stock. However, the situation is worse than expected and we have made some changes to our valuation model in terms of estimated "normalized" earnings, potential target multiple and discount rate. All of these changes combine to lower our target price to $48 from $56. While HAL's stock price would appear to have attractive upside relative to our target, we think investors should still avoid the stock over the near-term until a catalyst becomes more apparent.

RISKS

In our opinion, the major risks are as follows: 1) oil and gas prices turn out to be substantially below our current expectations; 2) oil company exploration and development spending does not live up to our expectations of 15-20% growth per year; 3) service industry cost increases outpace price improvements causing undue margin pressure; and 4) oilfield valuations, which have risen back to mid-cycle levels over the past year, do not rise further toward previous peak levels.

SUMMARY

- Halliburton reported third quarter EPS of $0.24 versus $0.17 in the second quarter and our $0.24 estimate. Excluding Dresser Equipment Group, second quarter EPS was $0.18, versus $0.06 last year, and $0.12 in the first quarter.
- ES was the source of the growth, driven by strong HES revenue and margins. Landmark had strong growth in operating results, while BRES operating income beat expectations. Improved HES margins were driven by recent U.S. pressure pumping, completion products, and drilling systems price hikes.
- We believe the near-term outlook for E&C is bleak. The company is working off backlog, with little orders coming in the door. We expect material declines in revenues and operating income from this group next quarter. Management plans a significant restructuring of these operations.
- Based on the weak E&C outlook, we are trimming our price target to $58 and our estimates as detailed in the table below and maintain our 1L rating.

2001 Quarterly Estimates represent continuing operations

OPINION

Summary - Halliburton reported third quarter EPS including the Dresser Equipment Group (DEG) of $0.24 versus $0.10 last year, $0.17 in the second quarter and in-line with our $0.24 estimate. Excluding DEG, the company earned $0.18 per share, versus $0.12 in the second quarter and effectively in-line with our estimate. The strong sequential earnings growth came almost entirely from from the Energy Services Group (ES), as the company's international operations showed signs of improvement, coupled with very strong domestic activity. While Halliburton's revenues were only up 5% sequentially, a shift towards the Energy Services Group gave margins a stronger boost than we had expected, leading to a 34% increase in operating profit. Despite the fact that results were in-line with our expectations, we are trimming our earnings estimates based on continued weakness in the Engineering & Construction (E&C) sector. We maintain our 1L investment rating but are reducing our price target to $58.

A member of citigroup

Operations - Halliburton reported third quarter revenues from continuing operations of $3.02 billion, shy of our $3.25 billion estimate. A $157 million shortfall in the Engineering & Construction Group (E&C) combined with a $74 million variance in the Energy Services Group (ES). The consolidated operating margin of 5.6% bested our 5.2% forecast due to the greater proportion of ES revenue. Net interest expense was higher than our estimate as the company did not pay down debt as fast as we had anticipated, coupled with increasing interest rates on the short-term debt. Pre-tax income of $140 million was just shy of our $145 million estimate. The tax rate was 37.9%, yielding net income of $82 million, or $0.18 per share, excluding the Dresser Equipment Group (DEG), compared with $52 million, or $0.12 per share in the second quarter and our projection of $83.8 million, or $0.19 per share. Including DEG, Halliburton earned net income of $109 million, or $0.24 per share, compared with $75 million, or $0.17 per share in the second quarter (excluding gains) and our projection of $107 million, or $0.24 per share.

Segment Analysis

Energy Services Group- Revenues of $2.02 billion missed our $2.09 billion forecast by 3%, up 7% sequentially and 19% year-over-year. The strong gains were driven by the Halliburton Energy Services division (HES), with revenues up 9% sequentially and 31% year-over-year. Geographically, North American revenues were up 17% sequentially and 56% year over year, with the Middle East and Latin America trailing at 19% and 15%, respectively. International operations represented 64% of the quarterly revenue, versus 67% last quarter and 70% last year. We expect the international component of revenues to begin to increase as those markets improve. From a product line standpoint, the third quarter improvement was led by pressure pumping, which represented 45% of HES revenue with incremental margins in excess of 30%, completion products, and drilling systems also showed improvement. Pressure pumping revenues were up 40% year-over-year and 13% sequentially from both increased activity and improved pricing. Year-to-date, Halliburton has received pricing improvement in U.S. pressure pumping, completion products and drilling systems, with furbther increases likely during the fourth quarter from discount reduction. Energy Services' operating margin of 7.2% was slightly above our forecast of 7.1%.

Revenues at Brown & Root Energy Services (BRES) were down slightly year-over-year, and up sequentially, with gains in Europe/Africa and the Far East more than offset by declines in North and Latin America. However, operating income was up $9 million sequentially, yet down $11 million year-over-year excluding the $88 million gain on asset sales. We expect revenues and operating profits for BRES, to turn down once again in the fourth quarter to just above breakeven operating profit, then to slowly recover through 2001, with strong gains anticipated in the second half of the year.

Landmark Graphics, while a small component of ES, posted revenues of approximately $70 million and operating profit of roughly $5 million. Both revenues and operating profit fell shy of our forecasts due to a moderaring in the sector's sequential growth this quarter, despite revenues being up 10% year over year. The outlook for Landmark is for its revenues and operating income to track those of HES as both businesses have similar drivers.

Engineering & Construction Group- The E&C Group reported revenues of $1.00 billion versus our $1.16 billion forecast, representing a 14% shortfall versus our expectations, and a 21% year-over-year decline. Anticipated increases due to seasonal refinery turnarounds were offset by the completion of several projects. Despite the revenue shortfall, the E&C group's operating margin, at 4.1%, was slightly ahead of our projection of 3.4%.

Kellog Brown & Root revenues fell 8% sequentially asn strong refinery mainenance demand prior to the winter refining season was not enough to offset the impact of completed contracts during the quarter. Yet, the mix of business was favorable with operating income climbing 13% sequentially. Brown & Root Services (BRS) revenues fell 23% year-over-year, and dropped by 17% sequentially as higher volumes of work at the Davenport

dockyards yielded healthy margins, without the revenues to take the place of the Balkans construction. The mix from hih dollar low-margin work, to lower dollar higher-margin revenues is positive, although it is by no means a good proxy for this business. Accordingly, operating income rose 15% sequentially and 7% over last year. We expect revenues and margins to decline through the first quarter of 2001, with a potentially large boost from the Australian railway project mid to late next year.

During the conference call, management indicated their desire to merge BRES with its construction peers in E&C and rationalize the entire business. This confirms the message we heard from management several weeks ago during our company visit. We beleive that some portion of the comapny's E&C business will likely be divested, particularly construction activities at KBR such as the stadium, railroad and highway type projects that the division has been involved with, which clearly seem non core for Halliburton. Similarly, the government contracting activity that makes up most of BRS may not make sense as a part of the long term Halliburton strategic focus. In most of these cases the businesses are healthy and produce attractive returns but may be more valuable as part of a different strategic framework. See our note dated October 6, 2000 for additional information.

Dresser Equipment Group- Revenues for the DEG, accounted for as a discontinued operation, were $346 million, exceeding our $340 million forecast, and were down 2% sequentially with year over year comparisons meaningless due to the sale of Ingersoll Dresser Pump and Dresser Rand. Operating income of $42 million beat our estimate of $38 million, up 14% sequentially and up 27% year-over-year. We had expected revenues and operating income to remain relatively flat throughout the year while Halliburton proceeds with their planned sale, however efficiency gains associated with previously implemented programs yielded some fruit during the quarter. The difference yielded a positive EPS surprise from DEG of $0.01 per share on top of our $0.05 estimate. Management indicated that they have observed healthy interest from potential suitors and expect to receive a favorable price when the deal is consummated, either late this year, or early next.

Conclusion- Halliburton's upstream oilfield services operations had an excellent quarter. While revenue growth did not quite meet our forecast, margin growth made up most of the difference. Furthermore, BRES posted an unexpectedly high operating profit, which we do not expect to recur. We expect that increasing contributions from the upstream businesses of HES and Landmark Graphics to be a recurring theme throughout this year as heavily capital intensive oilfield construction work (BRES), has yet to pick up in a meaningful way. While the long-term earnings outlook for BRES is very encouraging, particularly from the Barracuda & Caritinga project offshore Brazil and the EA pjoject offshore Nigeria, we believe the short term outlook is just as weak, with little new work to offset projects nearing completion. We expect a strong contribution from BRES during 2001, particularly in the latter half, as well as continued growth from both HES and Landmark. The outlook for the Engineering & Construction group should be driven by increased demand for natural gas, chemical, and liquified natural gas projects, as global energy consumption continues to grow, as well as other large construction contracts such as the Australian railway. However, previously submitted tenders for several projects are aging, and will likely be rebid in the near future, further delaying meaningful order growth for this division. Due largely to the weak E&C outlook, we are cutting our EPS estimates accordingly. We maintain our 1L investment rating but are reducing our price target to $58 based on our revised earnings estimates.

INVESTMENT THESIS

In the short-intermediate term, favorable North American oilfield trends should be complemented by several discrete international projects such as the recently awarded Barracuda/Caratinga development in Brazil. However, continued weakness at BRES and an excess of Oilfield capacity generally in international markets will offset much of the early gains. We estimate well over a 100-rig increase will be necessary outside North America to

tighten capacity in selected markets and improve margins, which we do not anticipate until at least late 2000. Increases in West Africa and Brazil would be most favorable for Halliburton, in our view.

COMPANY DESCRIPTION

Halliburton provides a comprehensive scope of products and services in well construction, production infrastructure, engineering and construction, and energy-related capital equipment. The company is organized into three groups - the Energy Services Group (ES), the Engineering and Construction Group (E&C), and the Dresser Equipment Group. The ES Group provides discrete services and products and integrated solutions to customers in the exploration, development and production of oil and gas and has three segments: Halliburton Energy Services (HES), Brown and Root Energy Services (BRES), and Landmark Graphics (LMRK). The E&C group provides services to energy and industrial customers and government entities worldwide and consists of two segments: Kellogg, Brown and Root and Brown and Root Services. The Dresser Equipment Group, which designs, manufactures and markets highly engineered products and systems, will be divested, with the sale targeted for late 2000 to early 2001.

Halliburton Co.

4Q Outlook In Line With Prior Guidance; Restructuring Charge Announced

Investment Conclusion

- Halliburton preannounced 4Q00 EPS in line with the lower guidance provided in their 3Q analyst call. HAL also declared a restructuring of its Engineering and Construction (E&C) business. An after-tax charge of $120 million will be incurred in 4Q related to the restructuring and project specific matters. Excluding the charge, HAL expects 4Q EPS in the range of $0.25-$0.27. Our 4Q EPS estimate remains unchanged at $0.25, as does our 2001 estimate of $1.50. We reiterate our Buy rating and $50 price target.
- Despite the rise in oil and natural gas prices, HAL has experienced weak performance in its shallow-water marine construction and downstream E&C businesses. The customer base for E&C is consolidating and financially pressured competitors have intensified competition and pricing in the marketplace. As a result, HAL is restructuring its company into two operating segments: the Halliburton Energy Services Group and the Engineering and Construction Group. About $25 million of the $120 million restructuring charge will be associated with reorganization costs related to severance and facility closures.
- HAL's goal for the E&C business is to earn 3% margins in 2001 and 3%-5% in the longer term, provided business conditions improve as expected. We believe this is a reasonable goal, consistent with traditional profitability in the business, and the reorganization should allow HAL to concentrate on reducing overhead in the E&C segment.
- The struggling E&C division has been a drag on HAL's stock performance. Based on our 2001 EPS estimates, HAL currently trades at a 35% valuation discount to other major oil services companies. Although part of this discrepancy is warranted due to the weak performance of the E&C business, we believe HAL can narrow the valuation gap with a successful reorganization. Additionally, the strength of the recovery in the oilfield service industry should also enhance stock price appreciation.

The New E&C

The E&C business will be consolidated under the Engineering and Construction Group when HAL reorganizes the company into two operating divisions. Kellogg Brown & Root will include the upstream oil and gas engineering and construction, fabrication capabilities, and the traditional engineering and construction business. No brand names are to be changed as a result of the reorganization.

The restructuring should help the consistency and profitability of the division. HAL's goal for the E&C business is to earn a 3% margin in 2001 and 3%-5% in the longer term. Backlog in the division at the end of November 2000 was $6.5 billion. Management expects backlog to grow further by the end of 2001. During the course of the year, about 60%-65% of the current backlog should be worked off.

The New Energy Services

The Halliburton Energy Services Group will include Halliburton Energy Services, Landmark Graphics, and large integrated projects that include both surface and sub-surface components. Additionally, the following Brown & Root Energy Services business will join the new segment: Halliburton Subsea, Wellstream, Production Services, Granherne, Bredero-Shaw joint venture and the EMC joint venture.

We don't anticipate the reorganization will have any noticeable affect on the Energy Services business. Some cost savings may be achieved, but the main reason for the restructuring is to improve the E&C cost structure. We expect Energy Services to continue to post growing results in this excellent oil services business environment.

Update on Dresser and Asbestos

HAL continues to actively pursue a buyer for its Dresser Equipment Group. Bids from prospective buyers are expected this week and HAL plans to be in negotiations with the high bidders by early January. Our current earnings estimates include the Dresser Equipment Group. This division generates about $0.05 EPS per quarter. Adjusted for the anticipated elimination of the Dresser Equipment earnings, our pro forma EPS estimate for 2001 is $1.28.

In the 3Q conference call, management stated that their new 10-Q filing would readdress the company's exposure to asbestos claims. Our evaluation of the update reveals only nominal changes to their financial exposure. The number of open claims has been in the 106,500-107,500 range since the end of 1999, but that number rose to 109,000 at the end of the third quarter. Highlands Insurance Co., an insurance carrier with which HAL associates $42 million in recoveries, issued a letter on August 23, 2000, denying coverage under the policies. This action by Highlands is not a surprise and legal wrangling is expected to continue for some time. As of September 30, 2000, HAL's net asbestos liability was $26 million compared to $24 million at the end of the second quarter. We believe HAL's asbestos liability is under control, especially in contrast to other companies. HAL has not elected to use any of their 3Q pre-tax gains to strengthen reserves, which we believe indicates management's confidence that the gravity of the issue has not intensified.

What's Going Wrong?

Although the E&C division was weak in the first half of 2000, we were surprised by management's earnings warning on the 3Q conference call. There were concerns that HAL might not have the critical mass to generate consistent and predictable profitability in the E&C business. Labor disturbances in Venezuela and West Africa caused significant costs to be incurred on several large fixed-fee E&C contracts. HAL has submitted claims on these costs to clients, but HAL does not believe that all the costs will be recovered. Additionally, relationships with some customers have deteriorated and the cost increase claims on seven other projects have not resolved as expected.

General industry-wide issues are also impacting the E&C business. Despite high oil and natural gas prices, spending for engineering and construction projects remains depressed. The difficult operating environment has forced some of Halliburton's E&C competition to cut prices and increase competitiveness.

As a result of the above issues, management guided 4Q EPS estimates down during their 3Q analyst call. In mid-October, our 4Q EPS estimate was $0.34, but that was lowered to $0.25 after the 3Q call. Management's current guidance of $0.25-$0.27 suggests that results are tracking as the company believed they would at the beginning of the quarter. We believe that any upside achieved in relation to our estimate is likely to be the result of outperformance in oil services as opposed to improvement in E&C.

What's Going Right?

HAL continues to experience very strong demand in its energy services business. There has been no change to our outlook regarding these markets, and we remain bullish on the sector. The North American oil service market continues to be the world's strongest market, although modest upticks have been experienced overseas. International markets will improve once the supermajor oil companies increase their upstream capital spending. We are expecting a solid increase in spending in 2001, after the majors maintained a surprisingly low level of activity in 2000. A survey by Energy Intelligence Group reveals that all of the supermajors are setting increases in their upstream capital budgets for 2001.

On average, the supermajors' budgets are estimated to increase 27%. If these spending increases come to fruition, HAL's oil service business should improve sharply. The company derives about 65% of its revenues from foreign markets.

* represents change in estimates

Following a conversation with the company this morning, we are reducing our fourth quarter 1999 and 2000 EPS estimates.

For the fourth quarter, we are trimming our estimate by $0.02 to $0.14 from $0.16 to reflect lower oilfield services profits. Specifically, we have reduced our operating profit estimate in the Energy Services segment by $8 million to $72 million (compared with $56 million in the third quarter and $212 million in the year-ago period). While the company provided little earnings guidance, it did suggest that any variance to consensus estimates for the quarter likely would not be more than a couple of pennies. That said, the company is more comfortable being on the conservative side, although it noted that it has not yet seen figures for December. Our fourth-quarter 1999 EPS estimate is modestly below the $0.16 consensus mean.

For 2000, we are reducing our EPS projection to $0.90 from $1.10 as we are now electing to use more conservative forecasts to reflect the lower base point in the fourth quarter for Energy Serviecs and lower profit expecations in Engineering & Constructiom. Specifically, we are reducing operating profit estimates meaningfully for the Energy Services segment ($95 million, or $0.13 per share) and Engineering & Construction ($40 million, or $0.06 per share); we are trimming our Dresser Equipment estimate by $4 million or $0.01 per share. In the Energy Services segment, we are reducing our revenue estimate to $7.55 billion from $7.75 billion (compared with $6.9 billion estimated for 1999) and our operating profit estimate to $495 million from $590 million (compared with $234 million estimated for 1999). In the Engineering & Construction segment, we are reducing our revenue estimate to $5,475 million from $5,525 million (compared with $5,453 million estimated for 1999), and operating profit estimates to $180 million from $220 million (compared with $203 million estimated for 1999). In the Dresser Equipment segment, we are maintaining our revenue estimate at $1.45 billion but trimming our operating profit estimate to $132 million from $136 million. Our 2000 EPS estimate is 19% below the current consensus mean of $1.11 per share, but in line with recent estimate reductions to the $0.85 to $1.00 range.

For 2001, we are maintaining EPS forecast at $1.75, which essentially [redacted]es the $1.74 consensus average.

Despite the estimate reductions, we remain positive on the industry

APP 060

[illegible]overy under way and Halliburton's earnings prospects through 2001. Consequently, we are reiterating our Buy/Buy ratings on the shares.

[HI Company Description:]Halliburton Company is a major provider of products and services to the petroleum and energy industris. In 1998, Halliburton's core Energy Services Group accounted for 52% of the company's total revenue and 67% of operating income (before special charges). Its other core group-Engineering and Construction-represented 32% of total revenue and 16% of operating income. The Dresser Equipment Group, which was acquired with Dresser Industries, comprised 16% of revenue and 17% of operating income. In 1998, 85% of the company's revenues were derived from the energy industry versus 84% in 1997 and 81% in 1996.

Halliburton states that reserves "are adequate to cover the estimated loss from asbestosis litigation."	Analyst reports that Halliburton's "prospective asbestos liabilities" had not changed materially and "should have minimal adverse impact on the company going forward."		Halliburton believes it would be "prudent to accrue $60 million" to cover "potential exposure" for asbestos litigation. Analyst reports that company believes that it has its asbestos situation "under control" and "financial impact should not be material to financial health of company." Analyst also reports Lesar indicated Halliburton maintains significant amount of insurance that should cover majority of any future claims or increases in the settlement rate.		Analyst reports, based on information from Halliburton, that asbestos exposure concerns appear to be overblown.	Lesar states that Halliburton has a "substantial amount of coverage," and asbestos claims are a "manageable problem."	Halliburton presents at a seminar to clarify Halliburton's asbestos liabilities, but makes no mention of $130 million verdict.	Forbes states that there is not "anything new to report on the Hampton-Walker...," and Lesar confirms "that there have been no adverse developments at all." They do not mention $130 million verdict.		Halliburton states that asbestos claims will be resolved without material adverse effect on its financial position or the results of operations.
		-4.60%*		5.20%*					-3.70%*		-42.10%*
		Halliburton says that its "worse case scenario" is $60 million to double the asbestos exposure for which it had previously reserved.		Halliburton doubles asbestos reserves to $124 million.					Halliburton announces second Texas jury verdict of $130 million (Halliburton faces for $21.3 million).		Halliburton files Form 8-K (Note 5 mentions recent Texas verdicts); Halliburton details recent asbestos verdicts, and makes clear that $123 million reserves are grossly inadequate and asbestos exposure is substantially greater than prior representations

[redacted]			[redacted]		[redacted]	
Halliburton states that its "aggressive cost reduction program and restructuring activities" allowed Halliburton "to remain profitable during this most difficult period," and Halliburton's "sequential quarterly results should continue to improve with significant improvement in 2000."	Halliburton states that its condensed consolidated financial statements "fairly" present Halliburton's financial condition.		Halliburton's 1999 Annual Report states: "All known or anticipated losses on contracts are provided for currently. Claims and change orders which are in the process of being negotiated with customers for extra work or changes in the scope of work are included in revenue when collection is deemed probable."	Halliburton releases 1Q 00 results that are falsely inflated by improper accounting practices. Cheney reports on Halliburton's profits on claiming projects in construction operations.		
[redacted]		[redacted]			[redacted]	[redacted]
		Analysts cut estimates of Halliburton's annual earnings for 2000 and 2001, based on "less powerful synergies from the Dresser merger" than expected and "reduced expectations for offshore construction results."			Halliburton announces massive restructuring of construction business due to operational problems, management inefficiencies and excessive costs in its construction operations.	Halliburton unveils its restructuring plan/ announces a 4Q 00 charge of $120 million, with $95 million due to cost overruns on fixed price contracts.

FORTUNE THOUSAND

Ranked within industries

[WELCOME TO THE FORTUNE 1,000]

Our list of the nation's 1,000 largest companies broadens the picture. Here you can compare FORTUNE 500 star Nike with footwear foe Reebok, which slid off the 500 after an 11-year run. Nike stomped its smaller competitor in total profits, EPS growth, and total return. This time, bigger *is* better.

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K. [ ]

The aggregate market value of Common Stock held by nonaffiliates on February 28, 2001, determined using the per share closing price on the New York Stock Exchange Composite tape of $39.82 on that date was approximately $17,029,000,000.

As of February 28, 2001, there were 428,468,110 shares of Halliburton Company Common Stock $2.50 par value per share outstanding.

Portions of the Halliburton Company Proxy Statement dated March 20, 2001, are incorporated by reference into Part III of this report.

Cash flows used in investing activities were $411 million for 2000, $107 million for 1999 and $790 million for 1998. Capital expenditures of $578 million in 2000 were about 11% higher than in 1999 and about 31% lower than in 1998. Capital spending was mostly for equipment for Halliburton Energy Services, which included investing in cementing equipment designed to integrate our pumping and mixing systems with new safety and technological features. Cash flows from investing activities in 1999 include $254 million collected on the receivables from the sale of our 36% interest in M-I L.L.C. Imputed interest on this receivable of $11 million is included in operating cash flows. In 1998, net cash used for investing activities includes various acquisitions of businesses of approximately $40 million.

Cash flows from financing activities used $584 million in 2000 and provided $189 million in 1999 and $267 million in 1998. We repaid $308 million on our long-term debt in 2000. Net short-term borrowings consisting of commercial paper and bank loans provided $629 million in 2000. Proceeds from exercises of stock options provided cash flows of $105 million in 2000 compared to $49 million in 1999 and 1998. Dividends to shareholders used $221 million of cash in 2000 and 1999. In April 2000 our Board of Directors approved a plan to implement a share repurchase program. As of December 31, 2000 we had repurchased over 20 million shares at a cost of $759 million. In addition, we repurchased $10 million of common stock both in 2000 and 1999 and $20 million in 1998 from employees to settle their income tax liabilities primarily for restricted stock lapses. We may periodically repurchase our common stock as we deem appropriate.

Cash flows from discontinued operations provided $816 million in 2000 as compared to $238 million and $235 million in 1999 and 1998, respectively. Cash flows for 2000 include proceeds from the sale of Dresser-Rand and Ingersoll-Dresser Pump of approximately $913 million.

Capital resources from internally generated funds and access to capital markets are sufficient to fund our working capital requirements, share repurchases and investing activities. Our combined short-term notes payable and long-term debt was 40%, 35% and 32% of total capitalization at the end of 2000, 1999 and 1998, respectively. In 2000, we reduced our short-term debt with proceeds from the sales of Ingersoll-Dresser Pump and Dresser-Rand joint ventures early in the year and increased short-term debt in the fourth quarter to fund share repurchases. We plan to use proceeds from the Dresser Equipment Group sale to pay down debt recently incurred for the repurchase of our shares. This should return the debt-to-capitalization ratio to the 30% to 35% range by the end of the second quarter of 2001.

FINANCIAL INSTRUMENT MARKET RISK

We are exposed to financial instrument market risk from changes in foreign currency exchange rates, interest rates and to a limited extent, commodity prices. We selectively hedge these exposures through the use of derivative instruments to mitigate our market risk from these exposures. The objective of our hedging is to protect our cash flows related to sales or purchases of goods or services from fluctuations in currency rates. Our use of derivative instruments includes the following types of market risk:

- volatility of the currency rates;
- time horizon of the derivative instruments;
- market cycles; and
- the type of derivative instruments used.

We do not use derivative instruments for trading purposes. We do not consider any of our hedging activities to be material. See Note 1 for additional information on our accounting policies on derivative instruments. See Note 17 for additional disclosures related to derivative instruments.

RESTRUCTURING ACTIVITIES

While oil and gas prices have continued to maintain the strength that provides positive uplift to our oilfield services and integrated exploration and production information systems businesses, our engineering and construction businesses continue to experience delays in customer commitments for new upstream and downstream projects. With the exception of deepwater projects, short-term prospects for increased engineering and construction activities in either the upstream or downstream businesses are not positive. The continued delays of upstream and downstream projects, and the resulting decrease in our backlog and levels of work, will make it difficult to achieve acceptable margins in 2001 in our engineering and construction businesses. Accordingly, in the fourth quarter of 2000 we approved a plan to re-combine all of our engineering and construction businesses into one business unit. As a result of the

Supp.App.067

USCA5 8431

SA591

reorganization of the engineering and construction businesses, we took actions to rationalize our operating structure including write-offs of equipment, engineering reference designs and capitalized software of $20 million and recorded severance costs of $16 million.

During the third and fourth quarters of 1998, we incurred special charges totaling $500 million related to the Dresser merger and industry downturn, of which $21 million has been recorded in discontinued operations. During the second quarter of 1999, we reversed $47 million of our 1998 special charges based on our reassessment of total costs to be incurred to complete the actions covered in the charges.

We have in process a program to exit approximately 500 properties, including service, administrative and manufacturing facilities. We accrued expenses to exit approximately 400 of these properties in the 1998 special charges. Most of these properties are within the Energy Services Group. Through December 31, 2000 we have vacated 97% of the approximate 500 total facilities. We have sold or returned to the owner 94% of the vacated properties.

ENVIRONMENTAL MATTERS

We are subject to numerous environmental legal and regulatory requirements related to our operations worldwide. As a result of these obligations, we are involved in specific environmental litigation and claims, the clean up of properties we own or have operated, and efforts to meet or correct compliance-related matters. See Note 9.

FORWARD-LOOKING INFORMATION

The Private Securities Litigation Reform Act of 1995 provides safe harbor provisions for forward-looking information. Forward-looking information is based on projections and estimates, not historical information. Some statements in this annual report are forward-looking. We may also provide oral or written forward-looking information in other materials we release to the public. Forward-looking information involves risks and uncertainties. Forward-looking information we provide reflects our best judgement based on current information. Our results of operations can be affected by inaccurate assumptions we make or by known or unknown risks and uncertainties. In addition, other factors may affect the accuracy of our forward-looking information. As a result, no forward-looking information can be guaranteed. Actual events and the results of operations may vary materially.

While it is not possible to identify all factors, we continue to face many risks and uncertainties that could cause actual results to differ from our forward-looking statements including:

Geopolitical and legal.

- trade restrictions and economic embargoes imposed by the United States and other countries;
- unsettled political conditions, war, civil unrest, currency controls and governmental actions in the numerous countries in which we operate;
- operations in countries with significant amounts of political risk, including, for example, Algeria, Angola, Libya, Nigeria, and Russia;
- changes in foreign exchange rates;
- changes in governmental regulations in the numerous countries in which we operate including, for example, regulations that:
  - encourage or mandate hiring local contractors; and
  - require foreign contractors to employ citizens of, or purchase supplies from, a particular jurisdiction;
- litigation, including, for example, asbestos litigation and environmental litigation; and
- environmental laws, including, for example, those that require emission performance standards for facilities;

Weather related.

- the effects of severe weather conditions, including, for example, hurricanes and tornadoes, on operations and facilities; and
- the impact of prolonged severe or mild weather conditions on the demand for and price of oil and natural gas;

HIGHLIGHTS:

HAL announced yesterday that it is considering accruing an additional $50 to $60 million after-tax to cover some asbestos liabilities of a company that had been spun off from one of its predecessor companies in 1992. This subsidiary, Harbison-Walker Refractories Co (HWR), is co-insured with HAL under a substantial insurance program. However, HWR's parent, RHI, an Austrian company, has indicated that it may be unwilling to fund the amount that HWR may need to pay out of pocket against asbestos claims and HAL may be forced to take a leadership role in negotiating settlement's of HWR's claims.

This charge, if taken, will be in Q2 for discontinued operations, and will be easily offset by the $300 million after-tax gain on the sale of Dresser Equipment Group. While insignificant by itself, it does remind people of HAL's asbestos liabilities and could depress its multiple as these concerns rear their head again. We continue to rate HAL a Buy because of its recent sharp pull back but prefer RIG, RHI and SLB (all Strong Buy rated) among the large caps. Our target price remains unchanged at $54 (based on a 27.0 multiple of 2002 EPS), implying an 11.9 multiple of 2002 EBITDA.

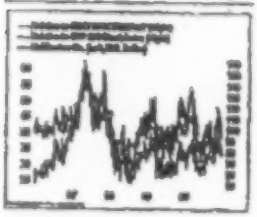
52-Week Range:	$55.19 - 32.20

- HAL may assist former subsidiary in management of asbestos claims. Harbison-Walker and Halliburton are co-defendants in many claims and are co-insured. HAL believes assisting Harbison may be in the best interest of shareholders.
- HAL may set up a reserve of $30-40 mm related to the Harbison claims. We believe that this would be a "rainy day" reserve for a worst case scenario, presumably involving insolvency on the part of Harbinson.
- We continue to believe asbestos is a virtual non-issue for HAL. Since 1976 the company has settled or disposed of 165,000 claims at a total cost of $124 mm ($32 mm, net of insurance), with another $29 mm reserved for additional claims.

Price: Abs. and Rel. To Market & Industry



Company Description

HalDeton is the largest oilfield services company in the world with products, services, and integrated solutions for oil and gas exploration, development, and production. Capabilities range from the initial evaluation of projects, formation re-drilling, completion, production enhancement, and well maintenance.

Summary and Investment Conclusion
Halliburton (HAL) may lend advisory and financial assistance to Harbison-Walker Refractories Company (which was spun-off from Dresser Industries, a HAL subsidiary, in 1992), in the management and settlement of asbestos claims which Harbison assumed at the time of the spin-off. Halliburton's management believes such an action may be in the best interest of Halliburton's shareholders because:

1. Many of the claims against Harbison also name Dresser as a co-defendant;

2. Harbison and Dresser are jointly covered under an insurance program which covers these claims and other claims against Dresser, giving Halliburton an interest in seeing these claims handled in the most cost efficient manner possible;

3. Dresser/Halliburton has historically been successful in managing the asbestos claims against it; and

4. Harbison has had no coordinated defense strategy in dealing with these claims, resulting in higher settlement and disposal costs to Harbison than have been historically realized by Dresser/Halliburton.

Halliburton is now in the process of investigating the claims against Harbison and the finances of Harbison and its affiliates. It currently believes that Harbison has 165,000 open claims filed against it, with some 52,000 subject to various negotiations and agreements. Should it agree to render assistance to Harbison, HAL currently believes it would set up an after-tax reserve of $30-60 million, net of insurance proceeds, to cover the claims against Harbison. The establishment of this reserve would be netted against the $300 million after-tax gain the company will recognize in the second quarter on the disposal of the Dresser Equipment Group. We believe such a reserve could be characterized as a "rainy day fund" to cover a worst case scenario, which, in our opinion, would include insolvency on the part of Harbison.

We continue to believe that asbestos liability is a virtual non-issue for Halliburton. Since 1976, Dresser/Halliburton has settled 165,000 asbestos claims at a total gross cost of $124 million, with insurance providing all but $32 million of the settlement funds. While the latest development related to Harbison was unexpected and bears further monitoring, based on our assessment of Dresser/Halliburton's historical experience in settling these claims, we do not currently believe it constitutes a significant risk to Halliburton's financial position or future results.

V = More volatile. We estimate that this stock has more than a 25% chance of a price move (up or down) of more than 25% in a month, based on a quantitative assessment of historical data, or in the analyst's view, it is likely to become materially more volatile over the next 1-12 months compared with the past three years. Stocks with less than one year of trading history are automatically rated as more volatile (unless otherwise noted). We note that securities that can do not necessarily consider "volatile" can still perform in that manner.

SUMMARY

- Halliburton announced that one of its former subsidiaries, Harbison-Walker (HW), has requested financial and management assistance for the settlement of asbestos claims for which it assumed responsibility.
- However, the two companies are effectively co-insured giving Halliburton an interest in the efficient resolution of the claims.
- Halliburton is in the process of investigating the status of the claims against HW, and that company's financial condition and may take over the management and resolution of the claims.
- Halliburton estimates that the maximum potential liability, net of insurance, that could arise out of HW is $60 million.
- We do not believe that Halliburton's asbestos exposure, including HW, presents a material risk and reiterate our Buy opinion.

OPINION

Halliburton recently announced that one of its former subsidiaries, Harbison-Walker Refractories Company (HW), has requested that Dresser Industries (a subsidiary of Halliburton since the merger) provide it with claims management and financial assistance for asbestos claims that it assumed liability for when it was spun-off from Dresser in 1992. During this spin-off, Dresser maintained the liability for claims prior to the spin and Harbison assumed liability for all future claims. However, the two companies are effectively co-insured giving Halliburton an interest in the efficient resolution of the claims.

Halliburton is in the process of investigating the status of the claims against HW, and that company's financial condition. If the company determines that it is in its interest to do so, it may take over the management and resolution of the claims against Harbison. At present, there are about 165,000 open claims, for which approximately 52,000 are in the process of being settled. Halliburton estimates that the maximum potential liability, net of insurance, that could arise out of HW is $60 million.

A member of category[redacted]

Additionally, Halliburton has asbestos exposure through several of its current subsidiaries, including Kellogg Brown & Root and businesses acquired in the Dresser Industries merger. The claims filed against Dresser involve allegations that some products they manufactured contained asbestos that injured people that inhaled the fibers. Coverage for some of these claims is provided by various insurers, and the company is seeking to negotiate coverage for the remainder.

The claims filed against KBR stem from alleged exposure to asbestos fibers contained in some of the materials used in various construction and renovation projects of the former Brown & Root. Coverage for these claims was provided by Highlands Insurance Company, which was once a subsidiary of Halliburton, and was spun-off in 1996. However, the Delaware Chancery Court has ruled that Highlands is not obligated to provide insurance coverage for asbestos claims filed against Kellogg Brown & Root since agreements entered into by Highlands and Halliburton at the time of the spin-off terminated the policies previously written by Highlands that would otherwise cover these claims. Halliburton disputes this ruling and has appealed the decision to the Delaware Supreme Court, where it ultimately expects to prevail based on its reading of the agreements and the advice of counsel.

There is risk from the company's asbestos liability on three fronts. First, the possibility of a dramatic increase in the number of new claims filed. The first quarter of 2001 saw 18,000 new claims filed, versus a total of 45,000 during all of 2000, indicating a potential annual total this year of 72,000 new claims. Second, claimants could become more aggressive in terms of the amount of money being sought, as has been the case with other asbestos defendants, such as McDermott International. Third, the Delaware Supreme Court could uphold the lower court ruling that Highlands is not obligated to provide insurance coverage for asbestos claims filed against Kellogg Brown & Root, thereby removing Halliburton's primary insurance coverage for these claims.

Despite the risks detailed above, we do not expect that Halliburton's asbestos exposure presents a material risk to the company's existence as a going concern. Firstly, the magnitude of the company's exposure is an order of magnitude lower than that of McDermott International, while Halliburton is a significantly larger and more profitable company. With $278 million of cash at the end of the first quarter, against an $84 million accrued liability for open claims, assuming no insurance coverage, Halliburton appears to have sufficient financial resources to manage this exposure. Thus, we reiterate our Buy rating on the stock.

COMPANY DESCRIPTION

Halliburton provides a comprehensive scope of products and services in well construction, production infrastructure, engineering and construction, and energy-related capital equipment. The company has been organized into three groups - the Energy Services Group (ESG), and Engineering and Construction Group (E&C). The ESG Group provides discrete services and products and integrated solutions to customers in the exploration, development and production of oil and gas and has three segments: Halliburton Energy Services (HES), part of the former Brown and Root Energy Services (BRES), and Landmark Graphics (LMRK). The E&C group provides services to energy and industrial customers and government entities worldwide and consists of two segments: Kellogg, Brown and Root (includes E&C activities of the former BRES) and Brown & Root Services.

The uncertainties of asbestos claim litigation and resolution of the litigation with insurance companies and Harbison-Walker described above make it difficult to accurately predict the results of the ultimate resolution of asbestos claims. That uncertainty is increased by the possibility of adverse court rulings or new legislation affecting the asbestos claim litigation or the settlement process. Subject to these uncertainties and based on our experience defending asbestos claims and our estimate of amounts we will recover from insurance, we believe that open asbestos claims will be resolved without a material adverse effect on our financial position or the results of operations.

Fort Ord litigation. Brown & Root Services, now operating as Kellogg Brown & Root, is a defendant in civil litigation pending in federal court in Sacramento, California. The lawsuit alleges that Brown & Root Services violated provisions of the False Claims Act while performing work for the United States Army at Fort Ord in California. This lawsuit was filed by a former employee in 1997. Brown & Root Services has denied the allegations and is preparing to defend itself at trial. Further proceedings in this civil lawsuit have been stayed while the investigation referred to in the next paragraph is ongoing. We believe that it is remote that this civil litigation will result in any material amount of damages being assessed against us.

Although in 1996 the United States Department of Justice declined to join this litigation, it has advised us that Brown & Root Services is the target of a federal grand jury investigation regarding the contract administration issues raised in the civil litigation. Brown & Root Services has been served with grand jury subpoenas, which required the production of documents relating to the Fort Ord contract and similar contracts at other locations. We are cooperating in this investigation. The United States Department of Justice has not made any specific allegations against Brown & Root Services.

Environmental. We are subject to numerous environmental legal and regulatory requirements related to our operations worldwide. We take a proactive approach in evaluating and addressing the environmental impact of our operations. Each year we assess and remediate contaminated properties in order to avoid future liabilities and comply with legal and regulatory requirements. On occasion we are involved in specific environmental litigation and claims, including the clean-up of properties we own or have operated as well as efforts to meet or correct compliance-related matters.

Some of our subsidiaries and former operating entities are involved as a potentially responsible party or PRP in remedial activities to clean-up several "Superfund" sites under United States federal law and comparable state laws. Kellogg Brown & Root is one of nine PRPs named at the Tri-State Mining District "Superfund" site, also known as the Jasper County "Superfund" site. Based on our negotiations with federal regulatory authorities and our evaluation of our responsibility for remediation at small portions of this site, we do not believe we will be compelled to make expenditures which will have a material adverse effect on our consolidated financial position or results of operations. However, the United States Department of the Interior and the State of Missouri have indicated that they might make a separate claim against Kellogg Brown & Root for natural resource damages. Discussions with them have not been concluded and we are unable to make a judgement about the amount of damages they may seek.

We also incur costs related to compliance with ever-changing environmental, legal and regulatory requirements in the jurisdictions where we operate. It is very difficult to quantify the potential liabilities. We do not expect these expenditures to have a material adverse effect on our consolidated financial position or our results of operations.

During the second quarter of 2001, we accrued $15 million for environmental matters related to liabilities retained on properties included in the sale of Dresser Equipment Group. Our accrued liabilities for environmental matters were $49 million as of September 30, 2001 and $31 million as of December 31, 2000.

Other. We are a party to various other legal proceedings. We expense the cost of legal fees related to these proceedings. We believe any liabilities we may have arising from these proceedings will not be material to our consolidated financial position or our results of operations.

IN THE

Supreme Court of the United States

No. 09-1403

ERICA P. JOHN FUND, INC., FKA ARCHDIOCESE OF MILWAUKEE SUPPORTING FUND, INC.,

Petitioner,

v.

HALLIBURTON CO. ET AL.,

Respondents.

On Petition for a Writ of Certiorari to the United States Court of Appeals for the Fifth Circuit

---

BRIEF IN OPPOSITION

INTRODUCTION

Petitioner Erica P. John Fund, Inc. (the Fund) alleges that the decision below diverges from a 2008 decision of "the Second Circuit and [recent decisions from] district courts in seven other circuits" with respect to whether a plaintiff must prove loss causation to obtain certification of a securities-fraud class action. Pet. 12. The division of authority alleged by the Fund is illusory. Contrary to the Fund's claims, the Second Circuit—like the Fifth Circuit—considers evidence of loss causation at the class-certification stage. Any distinction between the circuits

is merely procedural. The circuits' substantive approaches are indistinguishable.

This case illustrates the illusory nature of the alleged split. The evidence below showed no link between the alleged misrepresentations and any effect on the price of Halliburton's stock. Even the Fund does not dispute that the preponderance of the evidence showed the absence of loss causation. Respondents would therefore prevail under the Second Circuit's approach, which denies class certification when the evidence shows that loss causation is lacking. As such, this case presents a poor vehicle for review because the outcome would be the same regardless of the approach used.

Finally, even if there were a substantive divergence between the Second and Fifth circuit's approaches, such a shallow and recent split would not warrant this Court's review of an interlocutory decision denying class certification. As demonstrated by the Fund's petition, Pet. 15-17, lower courts across the Nation are just beginning to wrestle with this issue. Percolation is advisable to allow additional courts of appeals to consider the issues presented. Indeed, even the Fifth Circuit has not had occasion to consider the recent Second Circuit opinion relied upon by the Fund because the Fund declined to seek rehearing en banc. For all these reasons, the Court should deny the petition.

STATEMENT

I. BACKGROUND.

The Fund is lead plaintiff in this putative securities-fraud class action against Respondents Halliburton Company and its CEO David Lesar (collectively, Halliburton). Pet. App. 111-112. The Fund asserts three general categories of alleged misrepresentations. *Id.* at 124. These concern Halliburton's (1) potential liability in asbestos litigation; (2) accounting for revenue on fixed-

price construction contracts; and (3) potential benefits of a merger with Dresser Industries. *Id.* at 112-113. The Fund contends investors lost money when Halliburton's stock price dropped following the release of negative news. *Id.* at 113.

A securities-fraud plaintiff bringing a claim under Section 10(b) of the Securities Exchange Act and Rule 10b-5 must prove the following elements: (1) a material misrepresentation (or omission); (2) scienter; (3) a connection with the purchase or sale of a security; (4) reliance; (5) economic loss; and (6) loss causation, i.e., that the misrepresentation caused the alleged loss. *Dura Pharms., Inc.* v. *Broudo*, 544 U.S. 336, 341-342 (2005).

A securities-fraud plaintiff must also satisfy the requisites of Rule 23 to obtain class-action status. That rule permits class certification only if (1) the class is so numerous that joinder of all members is impracticable; (2) there are questions of law or fact common to the class; (3) the claims of the lead plaintiff are typical of those of the class; and (4) the lead plaintiff will adequately protect class interests. Fed. R. Civ. P. 23(a). Petitioner here sought certification under Rule 23(b)(3), which requires a plaintiff to prove that "the questions of law or fact common to class members predominate over any questions affecting only individual members." A plaintiff must establish each of the Rule 23 requirements by a preponderance of the evidence. *Teamsters Local 445 Freight Div. Pension Fund* v. *Bombardier Inc.*, 546 F.3d 196, 202 (2d Cir. 2008); *Oscar Private Equity Invs.* v. *Allegiance Telecom, Inc.*, 487 F.3d 261, 267-269 (5th Cir. 2007).

In *Basic Inc.* v. *Levinson*, this Court recognized that a plaintiff could not establish Rule 23's predominance requirement in a securities class action if each member of the proposed class were required to prove individual reliance. 485 U.S. 224, 242 (1988). Consequently, this

Court held that a putative class-action plaintiff may obtain a "rebuttable presumption" of class-wide reliance by invoking the "fraud-on-the-market" theory. The fraud-on-the-market theory assumes that in an efficient, well-developed market all public information about a company is known to the market and is reflected in the company's stock price. *Id.* at 246. The theory therefore posits that "[a]n investor who buys or sells stock at the price set by the market does so in reliance on the integrity of [the market] price." *Id.* at 247.

To trigger the fraud-on-the-market presumption of reliance, the plaintiff must show that (1) the defendant made public material misrepresentations; (2) the defendant's shares were traded in an efficient market; and (3) the plaintiff traded shares between the time the misrepresentations were made and the time the truth was revealed. *Basic*, 485 U.S. at 248 & n.27. Such a showing establishes the "threshold facts" for a rebuttable presumption that the entire class relied on the integrity of the price set by the market. *Id.* at 248. A defendant, however, may rebut the proof giving rise to the presumption or make "[a]ny showing that severs the link between the alleged misrepresentation and either the price received (or paid) by the plaintiff, or his decision to trade at a fair market price." *Ibid.*

II. Proceedings Below.

The district court denied the Fund's request for class certification, and the Court of Appeals for the Fifth Circuit affirmed. Pet. App. 111-136. Drawing on *Basic*, the court of appeals concluded that the district court properly refused class certification because the Fund is not entitled to the fraud-on-the-market presumption.

The court of appeals evaluated *Basic*'s application to cases where the plaintiff contends its losses derive not through increases in the stock price following alleged

misrepresentations, as in *Basic*, but instead through a decline in the stock price following alleged corrective disclosures. Pet. App. 115-118. In other words, the court of appeals considered when a proposed class is entitled to the fraud-on-the-market presumption where the plaintiff contends only that the company's stock price dropped following the release of negative information. *Ibid.* Particularly concerning to the court of appeals were situations where the negative news on its face does not correct the prior alleged misrepresentation or where the negative news contains non-culpable or industry-wide negative information. *Id.* at 116-120.

The court of appeals reiterated its previous holding in *Oscar Private Equity*, 487 F.3d at 269, that the touchstone for applying the fraud-on-the-market presumption is whether the alleged misrepresentation actually inflated the company's stock price. Pet. App. 112, 115; see *Basic*, 485 U.S. at 247 ("[a]n investor who buys or sells stock at the price set by the market does so in reliance on the integrity of [the market] price"). Thus, to be entitled to the presumption of reliance, a plaintiff must do more than simply allege a misrepresentation and show a price decline following a subsequent disclosure of negative information. Instead, the plaintiff must show that the alleged misrepresentations "actually moved the market." Pet. App. 115. To do that in a case involving alleged corrective disclosures, a plaintiff must "prove that its loss resulted directly because of the correction to a prior misleading statement." Pet. App. 117. Without such proof, "there would be no inference raised that the original, allegedly false statement caused an inflation in the stock price to begin with." *Ibid.* Quoting its earlier decision, the court of appeals explained that this showing of loss causation must be made "at the class certification stage by a preponderance of all admissible evidence." Pet. App. 115.

The court of appeals spelled out some specific corollaries which ensure that the alleged fraud is the cause of the allegedly inflated market price and resulting stock-price decline. First, plaintiffs must "show that a loss occurred from the decline in stock price because the truth made its way into the marketplace, rather than for some other reason, such as a result of changed economic circumstances, changed investor expectations, new industry-specific or firm-specific facts, conditions, or other factors independent of the fraud." Pet. App. 117. Similarly, "if a company releases multiple items of negative information on the same day, the plaintiff must establish a reasonable likelihood that a subsequent decline in stock price is due to the revelation of the truth of the earlier misstatement rather than to the release of the unrelated negative information." *Id.* at 117-118. Nor may a plaintiff rely on the release of "confirmatory information"—information that repeats facts already known to the market and thus already reflected in the stock price. *Id.* at 119. In sum, "a subsequent disclosure that does not correct and reveal the truth of the previously misleading statement" is not a sufficient basis for certifying a class under the fraud-on-the-market presumption. *Id.* at 118 (citing *Alaska Elec. Pension Fund* v. *Flowserve Corp.*, 572 F.3d 221, 230 (5th Cir. 2009) (O'Connor, J.)).

Applying the foregoing test, the court of appeals held that the Fund failed to show that any of Halliburton's alleged misrepresentations inflated the company's stock price. Pet. App. 123-136. The Fund's own analysis showed that Halliburton's stock never increased following any of the alleged misrepresentations; thus, the Fund relied "only on stock price decreases following allegedly corrective disclosures by Halliburton." Pet. App. 116. The court concluded, however, that the evidence failed to show that any disclosure followed by a

stock-price decline was corrective; i.e., revealed the falsity of any of Halliburton's alleged misrepresentations. It was "not enough merely to show that the market declined after a statement reporting negative news." *Ibid.* Rather, the evidence had to show that the decline in price following a disclosure "raise[d] an inference that the price was actually affected by earlier alleged misrepresentations." *Id.* at 117. The Fund could not make this showing and, therefore, could not demonstrate that any misrepresentation actually moved the market in the first place. Thus, the Fund could not invoke the fraud-on-the-market presumption of class-wide reliance as required to obtain class certification under Rule 23.

The Fund did not seek rehearing en banc. Instead, it filed this petition.

REASONS FOR DENYING THE PETITION

I. THERE IS NO DIVISION OF AUTHORITY AMONG THE CIRCUITS WITH RESPECT TO THE CONSIDERATION OF LOSS CAUSATION AT THE CLASS CERTIFICATION STAGE.

The Fund argues that the decision below conflicts with the decision in *In re Salomon Analyst Metromedia Litigation*, 544 F.3d 474 (2d Cir. 2008), and with the decisions of "district courts in seven other circuits." See Pet. 12-18. The alleged conflict with the Second Circuit is illusory, and the Fund's extensive reliance on district-court cases strikingly manifests that this issue is not yet ripe for the Court's review.

A. The Second Circuit Considers Loss Causation in Deciding Class Certification.

The Fund argues that the Second Circuit "squarely rejected" the Fifth Circuit's approach in *In re Salomon Analyst Metromedia Litigation*, 544 F.3d 474 (2d Cir. 2008). See Pet. 12-14. That is simply not so. The Second Circuit's decision in *In re Salomon* mentions the Fifth

Circuit's decision in *Oscar Private Equity* only once, and as discussed below, it does so *favorably*. Not surprisingly, then, *In re Salomon* produces more harmony with the decision below than disharmony. Indeed, the Second Circuit's approach is substantively indistinguishable from the Fifth Circuit's and will produce identical results in virtually all cases, including the present case.

In *In re Salomon*, the court of appeals *vacated* the district court's decision certifying a class. 544 F.3d at 486. The court emphatically agreed with the Fifth Circuit that the absence of loss causation would doom class certification by eliminating the class-wide presumption of reliance. *Id.* at 485-486. The court squarely rejected the Fund's position here that evidence of loss causation may not be considered at the class-certification stage. *Ibid.* And the Second Circuit was unconcerned that assessing loss causation would force the district court to consider a requirement that "is identical to an issue on the merits." *Id.* at 484; accord *ibid.* (rejecting district court's refusal to "weigh merits-related evidence" on loss causation). The court instead endorsed the Fifth Circuit's holding that loss-causation evidence is properly considered in determining whether a class can be certified. *Id.* at 485 (citing and quoting *Oscar Private Equity* v. *Allegiance Telecom, Inc.*, 487 F.3d 261, 270 (5th Cir. 2007)).

In re Salomon holds that a plaintiff need not initially prove that the alleged misrepresentations had a measurable effect on market price in order to satisfy *Basic*'s threshold requirements for invoking the fraud-on-the-market presumption. 544 F.3d at 482-483. However, the Second Circuit made clear that the defendant may rebut the presumption by introducing evidence tending to show the absence of loss causation. *Id.* at 483-484. The court quoted *Basic*'s holding that

"*[a]ny showing* that severs the link between the alleged misrepresentation and . . . the price . . . will be sufficient to rebut the presumption of reliance." *Ibid.* (quoting *Basic*, 485 U.S. at 248 (emphasis added)). Thus, a defendant may rebut the presumption by "showing that there was no price impact" from the misrepresentation. *Id.* at 483; see also *ibid.* (defendant may rebut the presumption by "show[ing] that the misrepresentation in fact did not lead to a distortion of price"); *id.* at 484 ("defendants are allowed to rebut the presumption . . . by showing . . . the absence of a price impact"). The Second Circuit left no doubt that the defendant could make this loss-causation showing "prior to class certification," *id.* at 484, turning back plaintiff's arguments to the contrary. *Id.* at 484-485. "The *Basic* Court explained that successful rebuttal defeats certification by defeating the Rule 23(b)(3) predominance requirement." *Id.* at 485 (citing *Basic*, 485 U.S. at 249 n.29). The Second Circuit therefore remanded so that defendants could attempt to rebut the presumption of reliance. *Id.* at 486.

In sum, there is very little difference between the approaches of the Second and Fifth circuits. Both consider evidence of loss causation at class certification, and both require that plaintiffs prove each of the Rule 23 requirements for class certification by a preponderance of the evidence. Any procedural divergence between the circuits is unlikely to make a substantive difference. That may be inferred from the relatively light burden that a defendant bears in rebutting *Basic*'s presumption of reliance. This Court has declared that "*[a]ny showing* that severs the link between the alleged misrepresentation and . . . the price . . . will be sufficient to rebut the presumption of reliance." *Basic*, 485 U.S. at 248 (emphasis added)). The Second Circuit seems to agree, requiring only that a defendant "*submi[t] evidence* to show that the misrepresentations did not

affect market price." *In re Salomon*, 544 F.3d at 485 (emphasis added). At all times, moreover, the ultimate burden of persuasion remains with the plaintiffs, for it is plaintiffs who must establish each of the Rule 23 requirements. *Teamsters Local 445 Freight Div. Pension Fund* v. *Bombardier Inc.*, 546 F.3d 196, 202 (2d Cir. 2008) (plaintiffs must satisfy Rule 23 by a "preponderance of the evidence"). Thus, *In re Salomon* explained that "[i]f defendants attempt to make a rebuttal . . . . the district judge must receive enough evidence . . . to be satisfied that each Rule 23 requirement has been met." *Id.* at 486; accord *Lapin* v. *Goldman Sachs & Co.*, No. 04 Civ. 2236, 2008 WL 4600994, at *2 (S.D.N.Y. Oct. 15, 2008) (explaining that under *In re Salomon* "the burden is on the plaintiff, and if the defendants contest the facts, the Court must engage in fact finding").[1]

It is doubtful that putative classes will be any easier to certify under the Second Circuit's procedure than under the Fifth Circuit's. After all, regardless of when or how the burden shifts, if the preponderance of evidence demonstrates the absence of loss causation, a class may not be certified. Commentators have recognized that the lower courts' slight procedural differences do not a circuit split make. "Ultimately, with both plaintiffs and defendants presenting evidence on the issue of loss causation at the class certification stage, and the courts

---

[1] Cf. *Tex. Dept. of Cmty. Affairs* v. *Burdine*, 450 U.S. 248, 252-254 (1981) (although plaintiff may invoke a rebuttable presumption that he suffered from discriminatory acts, the defendant may rebut the presumption by any admissible evidence of non-discriminatory motive, and the "ultimate burden of persuading the trier of fact . . . remains at all times with the plaintiff"); Fed. R. Evid. 301 ("a presumption imposes . . . the burden of going forward with evidence to rebut or meet the presumption, *but does not shift to such party the burden of proof*") (emphasis added).

applying the preponderance of the evidence standard to all admissible evidence, *it is likely there will be little difference between class certification in the Fifth and Second circuits.*" Jamie A. Levitt & Michael Gerard, *Loss Causation at Class Certification: Illusory Circuit Split*, N.Y.L.J. 4, 6 (Nov. 5, 2008) (emphasis added). The Fund itself seemed to agree in the court below. Although it spent several pages of its briefing arguing that the Fifth Circuit's approach is "[i]nconsistent [w]ith . . . the [p]recedent from [o]ther [c]ircuits," the Fund never cited the Second Circuit's decision in *In re Salomon*. See Appellant's CA5 Brief at 32-35 (filed May 4, 2009); Appellant's CA5 Reply Brief at 8-9 (filed June 30, 2009).[2]

At the very least, it is unclear that there will be any real-world impact flowing from any minor differences

---

[2] A later Second Circuit decision confirms that the absence of loss causation defeats class certification within the Second Circuit. See *In re Flag Telecom Holdings, Ltd. Sec. Litig.*, 574 F.3d 29 (2009). *In re Flag Telecom* does *not* "cit[e] approvingly the district court cases in the Second Circuit rejecting *Oscar*," as the Fund contends. Pet. 14 n.7. Rather, as the Fund concedes, the court was asked to "reject the approach taken by the Fifth Circuit Court of Appeals in [*Oscar*]," but declined to do so because the issue of "loss causation in the context of the Rule 23(b)(3) predominance requirement . . . . is not before us here." *In re Flag Telecom*, 574 F.3d at 39. However, the court of appeals did require plaintiffs to prove loss causation in order to satisfy Rule 23's adequacy and typicality requirements with respect to a subset of the defined class—so-called "in and out traders." *Id.* at 39-40. After a detailed analysis of loss causation reminiscent of the decision below, *id.* at 40-41, the court "conclude[d] that Plaintiffs have not put forth sufficient evidence on which the in-and-out traders could establish loss causation, and they therefore must be excluded from the certified class." *Id.* at 41. *In re Flag Telecom* thus confirms two important points: (1) the Second Circuit has *not* rejected the Fifth Circuit's approach to loss causation; and (2) plaintiffs in the Second Circuit bear the ultimate burden of proof with respect to merits issues—including loss causation—that overlap with Rule 23's class-certification requirements.

between the Second and Fifth circuits. All we have so far is one Second Circuit decision *vacating* class certification. That uncertainty counsels further percolation. See, *infra*, at 14-15. And the certainty that the present case would come out the same way under either circuit's approach militates strongly against review. See, *infra*, at 16-22.

B. No Other Court of Appeals Disagrees with the Decision Below.

Citing decisions from the First, Third, and Ninth circuits, the Fund asserts that the decision below is in "considerable tension" with the holdings of other courts of appeals. Pet. 15. As the Fund's formulation betrays, there is in fact no real division of authority. The Fund's own parenthetical descriptions of the First and Ninth circuits' decisions reveal only general statements that a plaintiff must prove an efficient market in order to trigger *Basic*'s fraud-on-the-market presumption. *Ibid.* (citing *In re Polymedica Corp. Sec. Litig.*, 432 F.3d 1, 7 (1st Cir. 2005); *Binder* v. *Gillespie*, 184 F.3d 1059, 1064 (9th Cir. 1999)). These decisions do not address whether loss causation is relevant to class certification.[3]

---

[3] In *In re Polymedica*, the First Circuit *vacated* the district court's order certifying a class because the plaintiff failed to establish "market efficiency," and thus could not invoke the fraud-on-the-market presumption. On remand, the district court denied class certification, holding that *In re Polymedica*'s requirement of market efficiency "erects a significant hurdle" for plaintiffs. *In re Polymedica Corp. Sec. Litig.*, 453 F. Supp. 2d 260, 272 (D. Mass. 2006). The court found that plaintiffs fell short of establishing the "most important" factor in the market-efficiency test—"a cause-and-effect relationship over time between unexpected corporate events or financial releases and an immediate response in stock price." *Id.* at 265. Thus, it appears that the First Circuit's market-efficiency requirement imposes a similar burden as the Fifth Circuit's loss-causation requirement. See also *In re Xcelera.com Sec. Litig.*, 430 F.3d 503, 512 & n.10, 513 (1st Cir. 2005) (affirming class certification

Moreover, they predate both *Oscar Private Equity* and *In re Salomon*, and therefore had no occasion to confront whether the Second and Fifth circuits are correct to consider proof of loss causation before certifying a class.

The Third Circuit case cited by the Fund, if anything, *supports* the Fifth Circuit's approach in the decision below. See Pet. 15 (citing *In re Burlington Coat Factory Sec. Litig.*, 114 F.3d 1410 (3d Cir. 1997)). There, then-Judge Alito declared for the court that "[i]n the context of an 'efficient' market, the concept of materiality translates into information that alters the price of the firm's stock." *In re Burlington*, 114 F.3d at 1425. While *In re Burlington* decided an appeal of a 12(b)(6) motion to dismiss, its reasoning strongly suggests that the Third Circuit agrees with the Fifth Circuit's requirement to show a price impact in order to apply *Basic*'s fraud-on-the-market presumption.[4] Indeed, the Third Circuit later held that class certification was inappropriate where "plaintiffs' claims do not involve an omission or misrepresentation that affected the value of a security in an efficient market. Therefore, a presumption of reliance based on this theory would be inappropriate." *Newton* v. *Merrill Lynch, Pierce, Fenner & Smith, Inc.*, 259 F.3d 154, 175-176 (3d Cir. 2001). These decisions have led one recent commentator to remark that the Third Circuit's approach to materiality is simply "*Oscar* in another guise." Donald C. Langevoort, *Basic at Twenty:*

---

because plaintiffs presented "a sophisticated event study" showing that Xcelera stock "reacted strongly . . . to new information concerning the company (including . . . disclosures at issue in this case")).

[4] See also *Oran* v. *Stafford*, 226 F.3d 275, 282 (3d Cir. 2000) (Alito, J.) (holding that "if a company's disclosure of information has no effect on stock prices, it follows that the information disclosed . . . was immaterial as a matter of law") (quotation omitted).

Rethinking Fraud on the Market, 2009 Wisc. L. Rev. 151, 190 (2009).

C. Prudential Considerations Counsel against Certiorari.

In addition to the lack of tension between the substantive approaches of the Second Circuit and the decision below, prudential considerations also strongly counsel against wading into this shallow and inconsequential (alleged) split. To begin with, the Fund's alleged split involves only one court of appeals on either side. It is less than two years old. And the Second Circuit's decision *agrees* with the decision below that loss causation is relevant at the class-certification stage. Any disagreement is merely procedural. In practice, it seems unlikely that the Second Circuit's approach will differ at all from that of the Fifth Circuit. See, *supra*, at 7-12. Indeed, in this very case, the outcome would be the same regardless of whether the Second or Fifth circuit's precedent applied. See, *infra*, at 16-22.

All of this suggests that further percolation is warranted. Moreover, as the Fund's citation of district-court decisions from the last two years demonstrates, the lower courts are just beginning to confront this issue. Analysis by additional courts of appeals would greatly aid this Court if it eventually wishes to address this issue. Time will also reveal whether the Second and Fifth circuits' approaches diverge in any meaningful way. Likewise, it is quite possible that either the Second Circuit or the Fifth Circuit would take a case en banc and agree with the other circuit's approach. The Fifth Circuit did not have that opportunity in the present case because the Fund declined to seek rehearing en banc to give the Fifth Circuit a chance to consider the Second Circuit's decision in *In re Salomon*. Thus, time may well dissolve any circuit tension altogether, reveal it to be immaterial, or at the very least, provide additional, in-depth analysis

of the question presented by appellate judges throughout the Nation.

The absence of need for immediate intervention by this Court is confirmed by both the nature of the issue presented and its procedural posture. In *Basic*, this Court intentionally declined to embrace any particular variant of the fraud-on-the-market theory. 485 U.S. at 242, 247-248 & nn. 24, 28; see *In re Polymedica Corp.*, 432 F.3d at 12 (referencing this Court's "disclaimer that it was not adopting any particular economic theory in applying the fraud-on-the-market presumption of reliance"). Other than placing the initial burden on the plaintiff to show material misrepresentations and market efficiency, and allowing defendants to rebut the presumption, this Court did not "set forth any" specific procedural or substantive "rules with respect to [lower courts'] application" of the fraud-on-the-market presumption. John A. MacKerron, *The Price Integrity Cause of Action under Rule 10b-5*, 69 Or. L. Rev. 177, 197 (1990). Consequently, courts and commentators alike have perceived that "*Basic* essentially allows each of the circuits room to develop its own fraud-on-the-market rules." *Nathenson* v. *Zonagen*, 267 F.3d 400, 414 (5th Cir. 2001). Accord *In re Polymedica*, 432 F.3d at 12 ("*Basic* . . . did not directly address the meaning of an efficient market, choosing instead to leave the development of that concept to the lower courts"); Patricia Groot, *Fraud on the Market Gets a Mini-Trial*, 58 Duke L.J. 1143, 1154-1155 (2009) (observing that *Basic* "seemed content that lower courts would sort out substantive and procedural issues—including what proof plaintiffs must show to invoke the theory"); Russell Robinson, Comment, *Fraud-on-the-Market Theory and Thinly-Traded Securities under Rule 10b-5: How Does a Court Decide if a Stock Market is Efficient?*, 25 Wake Forest L. Rev. 223, 225 (1990) (stating that *Basic* "left to

the lower courts the task of determining the practical application of fraud-on-the-market theory"). This Court's grant of discretion to the lower courts to work out the details concerning class certification in fraud-on-the-market cases weighs heavily against review in the absence of a significant and direct circuit split.

The Fund, moreover, seeks review of an interlocutory order denying class certification. This Court is quite reluctant to review decisions that do not finally resolve the merits of a dispute. Eugene Gressman et al, *Supreme Court Practice* 280-283 (9th ed. 2007). *Basic* itself addressed the class-certification issue only after "the District Court granted summary judgment." 485 U.S. at 228-229. When this Court's reluctance to review interlocutory appeals is combined with *Basic*'s intent to allow the courts of appeals flexibility in addressing the fraud-on-the-market presumption, it is unsurprising that this Court has *never* granted certiorari to review an interlocutory class-certification decision in a securities-fraud case.[5] The Fund has presented no compelling reasons why this case should be the first.

II. This Case Presents a Poor Vehicle Because the Outcome Would Be the Same in any Court of Appeals.

In addition to the foregoing prudential reasons to deny certiorari, this case is not an appropriate vehicle to address the procedural framework for considering loss causation. The Fund's reliance on a Second Circuit decision *vacating* a certified class cannot possibly demonstrate that this case would be decided differently

---

[5] Indeed, it appears that the *only* case in which this Court has ever reviewed an interlocutory decision pertaining to class certification is *Amchem Products, Inc.* v. *Windsor*, 521 U.S. 591, 597 (1997) (affirming decertification of settlement class of plaintiffs allegedly harmed by asbestos).

in another circuit. Indeed, the class proposed here could not be certified regardless of whether this case was litigated in the Second or Fifth circuit.

Both courts of appeals apply the same substantive standard of proof. The Fifth Circuit requires plaintiffs alleging losses resulting from a stock-price decline to prove that it was a corrective disclosure, "and not any unrelated negative information," that caused the stock price to drop. Without such a showing, the premise for the fraud-on-the-market presumption—that "the alleged misstatement actually moved the market"—is absent. Pet. App. 115. The Second Circuit permits defendants to rebut the presumption at the class-certification stage by showing that "the misrepresentation in fact did not lead to a distortion in price." *In re Salomon*, 544 F.3d at 483; *id.* at 484.

It is not overly difficult for a defendant to rebut the presumption of reliance. *Basic* holds that "*[a]ny showing* that severs the link between the alleged misrepresentation and . . . the price . . . will be sufficient to rebut the presumption of reliance." *Basic*, 485 U.S. at 248 (emphasis added). The Second Circuit seems to set a similarly low bar, requiring only that a defendant "*submi[t] evidence* to show that the misrepresentations did not affect market price." *In re Salomon*, 544 F.3d at 485 (emphasis added). Halliburton indisputably met that standard. But even if the Second Circuit would have required Halliburton to disprove loss causation by a preponderance of the evidence—which is unlikely, see, *supra*, at 9-11 & nn.1-2—Halliburton's proof was more than sufficient.

The Fund did not even allege that the stock price increased following the release of misrepresentations. Pet. App. 116. In fact, the Fund's expert conceded that her own study showed that there was no price increase caused by any of the alleged misrepresentations. C.A.

App. 6953, 6955-6956, 7059-7071; see Pet. App. 7 n.11 (stating that the Fund did "not point to any stock price increases resulting from positive misrepresentations"); *id.* at 116. Rather, the Fund alleged only that the stock price declined following the release of negative news, which it contended was related to one or more of the three categories of alleged misrepresentations. The Second and Fifth circuit's substantive standards for proving loss causation via negative disclosures are identical. Compare Pet. App. 116 (plaintiffs must prove loss resulted from "release of the alleged 'truth' of the earlier falsehood") with *In re Flag Telecom*, 574 F.3d at 41 (declining to certify class of plaintiffs who "have not presented sufficient evidence on which the lower court could conclude that any of the events revealed the truth about the subject of any of Defendants' alleged misstatements"). The Fifth Circuit held that the record evidence did not measure up to this standard. Thus, Halliburton would prevail regardless of the procedural road travelled.

The Fund makes no serious attempt to demonstrate that the outcome of this case would be different under the Second Circuit's procedural framework. Indeed, the Fund does not dispute that the preponderance of evidence in this case showed the absence of loss causation. The Fund discusses the specific facts of the case for only one paragraph on page 25 of its petition. Presumably, the Fund recounts what it thinks is its strongest allegation. A brief examination of the alleged corrective disclosure mentioned in the petition illustrates that the preponderance of record evidence defeats loss causation.

The Fund alleged that Halliburton misrepresented its projected asbestos liability and the reserves set aside to cover that liability. See Pet. 25; Pet. App. 124-125. One stock-price decline on which the Fund relied occurred

when Halliburton had to establish new reserves in June 2001 as a result of becoming responsible for the liability of a company (Harbison-Walker) spun off nine years earlier by another company (Dresser Industries) that was later acquired by Halliburton. *Ibid.*

In 1992, several years before merging with Halliburton, Dresser spun off Harbison-Walker. In connection with that transaction, Harbison-Walker agreed to indemnify Dresser for all future asbestos claims. C.A. App. 7685. When Halliburton later acquired Dresser in 1998, Halliburton disclosed information to the market concerning Harbison-Walker's indemnity agreement. *Ibid.* Harbison-Walker confirmed its agreement to indemnify Dresser/Halliburton in 2000, a fact that Halliburton disclosed in its 2000 Form 10-K, issued in March 2001. C.A. App. 7704.

In May 2001, Halliburton stated that its asbestos reserves for pending claims were $30 million dollars. Pet. App. 124. In June 2001, despite having recently acknowledged its indemnity obligation, Harbison-Walker unexpectedly "asked Halliburton to provide financial assistance for asbestos claims that Harbison-Walker had previously agreed to assume." *Ibid.*; cf. Pet. 25. Halliburton immediately disclosed this information in a June 28, 2001 press release, announcing that it would need to add new asbestos reserves of $50 to $60 million to cover this unexpected liability, and Halliburton's stock declined. Pet. App. 124-125.

The June 28 press release was not a corrective disclosure that revealed the falsity of any alleged misstatement. To the contrary, the June 28 press release stated that Harbison-Walker's request for assistance was "an unexpected development." C.A. App. 7747; Pet. App. 124. Indeed, Halliburton's 2000 10-K—filed in March 2001—had made clear that Harbison-Walker claims were *not* included in the previous estimate of $30 million in

asbestos liability. C.A. App. 7703-7704; see Pet. App. 126. Halliburton, moreover, produced evidence that it had made the market aware in the same 10-K (and previous filings) of Harbison-Walker's agreement to indemnify Halliburton; thus, the market knew Halliburton would be on the hook if Harbison-Walker became unable to fulfill its agreement to be responsible for its own asbestos liability. C.A. App. 7685, 7704; Pet. App. 126.

The Fund's own expert admitted that Halliburton had not previously told the market that Harbison-Walker "will never request or need our assistance on any of the asbestos claims they agreed to assume." C.A. App. 7668; Pet. App. 125 ("Plaintiff makes no argument that Halliburton made prior statements about exposure from claims related to Harbison-Walker.") Pet. App. 16 ("[t]here is no allegation—and certainly no evidence—that Harbison-Walker required Dresser's assistance prior to this disclosure"). Unsurprisingly then, the Fund's expert declined to testify that the June 28, 2001 statement corrected the falsity of any previous misrepresentation. She claimed only that the new information "corrected investors' erroneous assessments [of] Halliburton's asbestos liability." C.A. App. 6916; see Pet. App. 125-126.[6]

---

[6] This is but one example of how Halliburton amply demonstrated that the alleged "misrepresentation[s] in fact did not lead to a distortion in price." *In re Salomon*, 544 F.3d at 483. Through expert testimony and a side-by-side comparison of the alleged misrepresentations and subsequent disclosures, Halliburton rebutted the fraud-on-the-market presumption by proving that the Fund's only alleged "basis for finding that the fraud had been transmitted through the market price [was] gone." *Basic*, 485 U.S. at 248. In some cases, the alleged misrepresentation was confirmatory of information previously released to the market and therefore would have no effect on the market price under the fraud-on-the-market theory. Pet. App. 127. In other cases, the alleged

The court of appeals therefore concluded that the Fund could not rely on the June 28, 2001 press release for application of the fraud-on-the-market presumption because it did not correct any previous alleged misstatement. Pet. App. 125-127. This holding would occur even in the Second Circuit because Halliburton proved that the June 28, 2001 disclosure was no indication that any alleged misrepresentation "le[]d to a distortion in price." *In re Salomon*, 544 F.3d at 483.

It is noteworthy that the Fund does not dispute that "a company is allowed to be proven wrong in its estimates." Pet. App. 126. It would indeed be bad public policy to punish companies with a securities-fraud lawsuit every time they dutifully report negative developments to the market. The Fund's pro-class-action policy arguments (see Pet. 32-33), by contrast, simply are not implicated by this case, where the preponderance of the evidence indisputably shows an absence of loss causation. In light of that evidentiary record, the Fifth Circuit reasonably declined "to draw the inference that the June 28, 2001 press release corrected allegedly *false* estimates of asbestos reserves merely because those reserves *changed*." Pet. App. 126 (emphasis added). That commonsense conclusion would not alter under the Second Circuit's precedent.[7]

---

corrective disclosures conveyed only new, negative information or industry-wide developments and did not correct prior allegedly misleading statements or estimates. *Id.* at 128-129, 131, 134-135.

[7] The Fund mistakenly contends that the court of appeals held that the June 28, 2001 statement was not a corrective disclosure because it "did not indicate that Halliburton *knew* of Harbison-Walker's financial difficulties prior to the announcement." Pet. 25 (emphasis in original). As the evidentiary discussion above shows, however, the Fund's claim failed because the June 28, 2001 statement did not correct any misstatement previously *conveyed to the market*. The Fifth Circuit's analysis thus turned on the state of the market's

Because the court of appeals' decision is correct regardless of which circuit's approach is applied, this case does not present a suitable vehicle for resolving the first question presented.

III. THE DECISION BELOW DOES NOT CONFLICT WITH ANY DECISION OF THIS COURT.

In its second question presented and elsewhere throughout its petition, the Fund argues that the decision below conflicts with various decisions of this Court. To the contrary, the decision below faithfully interprets *Basic* and other precedents addressing securities-fraud class actions.

A. The Decision below is Consistent with *Basic*.

The decision below is consistent with the fraud-on-the-market framework set forth in *Basic*. See Pet. 18-31. Thus, it is hardly surprising that no court of appeals has rejected the Fifth Circuit's approach, nor that the approaches of the Second and Third circuits are substantively indistinguishable from the Fifth Circuit's. See, *supra*, at 7-14.

The Fund complains that the decision below "conflate[s] loss causation and the fraud-on-the-market theory of reliance," Pet. 22, while the Fund believes loss causation is "analytically distinct from whether [plaintiffs] can establish reliance based on the integrity of the market price." *Id.* at 20-21. Thus, the Fund contends that evidence concerning a misrepresentation's impact on stock price has no place whatsoever in determining whether a plaintiff may rely upon the fraud-on-the-market presumption. No circuit has endorsed such a

---

knowledge, not on Halliburton's scienter. Pet. App. 125 ("The June 28, 2001, press release does not correct any specific misrepresentation by revealing a previously obscured truth."); see *id.* at 125-127.

categorical position. That is because the Fund misunderstands *Basic*.

To establish the threshold facts necessary for invoking the presumption of reliance, *Basic* requires a plaintiff to show that the defendant's "misrepresentations were material" and that those misrepresentations "would induce a reasonable, relying investor to misjudge the value of the shares." *Basic*, 485 U.S. at 248 n.27 (emphasis added). *Basic*'s presumption is bottomed on investors' "reliance on the integrity of [the market] price." *Id.* at 247. When the integrity of the market price has not been distorted by the alleged misrepresentation, there is no basis for the plaintiff to invoke the fraud-on-the-market presumption. Thus, as one leading commentator explained, the presumption of reliance and loss causation are closely intertwined: "[C]ourts attempting to apply the fraud-on-the-market theory to securities-fraud cases must concern themselves with whether a particular misstatement or material omission fooled the market. . . . If a particular nondisclosure did not fool the market, then plaintiff's reliance on the market's integrity was not misplaced." Jonathan R. Macey et al., *Good Finance, Bad Economics: An Analysis of the Fraud-on-the-Market Theory*, 42 Stan. L. Rev. 1059, 1077 (1990).

Loss causation, moreover, is central to the presumption of reliance inasmuch as *Basic* recognizes defendants' ability to rebut the presumption by disproving any impact on price. "Any showing that severs the link between the alleged misrepresentation and . . . the price . . . will be sufficient to rebut the presumption of reliance." *Basic*, 485 U.S. at 248. Indeed, the Second Circuit decision that the Fund elsewhere endorses flatly rejects the Fund's position that loss-causation evidence is irrelevant to the reliance presumption: "*Basic* made clear that defendants could

'rebut proof of the elements giving rise to the presumption, *or show that the misrepresentation in fact did not lead to a distortion of price.*'" *In re Salomon*, 544 F.3d at 483 (quoting *Basic*, 485 U.S. at 248) (emphasis added). The Fund cannot identify a single appellate decision accepting its doctrinaire stance that evidence of loss causation has no bearing on whether a plaintiff may employ the fraud-on-the-market presumption.[8]

Basic and the courts of appeals place a relatively light burden on defendants to rebut the presumption. See, *supra*, at 9-11. And, in any event, the district court must ultimately resolve the fraud-on-the-market question by the preponderance of all admissible evidence. A slight variation in the circuits' procedural implementation of *Basic* is a tolerable consequence of this Court's decision to give lower courts leeway to interpret the broad strokes of the fraud-on-the-market theory. See *supra*, at 15-16. There is no call for this Court to grant review absent a

---

[8] The Fund inexplicably reads *Basic* to mean that a defendant may rebut the presumption "only by evidence that the stock does not trade in an efficient market or that the plaintiff did not rely on the price of the stock." Pet. 30. No court of appeals has adopted such a crabbed interpretation of *Basic*'s mandate that "*any showing*" severing the link between misrepresentation and stock price is sufficient to rebut the presumption. The examples given in *Basic*, 485 U.S. at 248-249, are just that—examples—and by no means exhaust the types of evidence encompassed by "any showing." In any case, the examples illustrate that a defendant may rebut the presumption by proving "that the market price would not have been affected by their misrepresentations." *Ibid.* For example, a defendant may show that "despite petitioners' allegedly fraudulent attempt to manipulate market price, news of the merger discussion credibly entered the market and dissipated the effects of the misstatements." *Ibid.* This example is virtually identical to the Fifth Circuit's holding that many of plaintiffs' alleged corrective disclosures were actually "confirmatory" statements that merely confirmed what the market already knew. Pet. App. 119, 123, 127.

showing that the Fifth Circuit's interpretation of *Basic* is leading to drastically different results than in other circuits.

Finally, the Fund argues that *Basic* permits consideration of defendants' rebuttal evidence only *at trial*. Pet. 29-30. Again, the Fund's position is refuted by the Second Circuit decision on which it elsewhere principally relies. "The *Basic* Court explained that a successful rebuttal *defeats* certification by defeating the Rule 23(b)(3) predominance requirement." *In re Salomon*, 544 F.3d at 485 (citing *Basic*, 485 U.S. at 249 n.29). Thus, "defendants are allowed to rebut the presumption, *prior to class certification*, by showing, for example, the absence of a price impact." *Id.* at 484 (emphasis added). The Fifth and Third circuits agree. Pet. App. 115; *Newton* v. *Merrill Lynch, Pierce, Fenner & Smith, Inc.*, 259 F.3d 154, 175-176 (3d Cir. 2001) (denying class certification where "plaintiffs' claims do not involve an omission or misrepresentation that affected the value of a security in an efficient market.") The Fund's argument that rebuttal must be made at trial, if applied, would not only waste judicial resources, but would also flatly contradict the context and reasoning of *Basic*, which established a *rebuttable* presumption of reliance as part of its review of a *class-certification* order.[9]

---

[9] The Fund cites footnote *dicta* from a single appellate decision that arguably supports its view that trial is the proper time for rebuttal evidence under *Basic*. Pet. 29 (citing *In re Polymedica*, 432 F.3d at 7 n.10). As discussed *supra*, at 12-13 n.3, however, *In re Polymedica* requires district courts to undertake a stringent "market efficiency" analysis before certifying a class that appears to overlap with loss-causation analysis.

B. The Decision below is Consistent with *Stoneridge* and *Merck*.

In the course of propounding its novel interpretation of *Basic*, the Fund argues that the decision below conflicts with two other decisions of this Court. It does not.

First, the Fund half-heartedly argues that the decision below conflicts with the recitation of *Basic*'s requirements in *Stoneridge Investment Partners* v. *Scientific-Atlanta, Inc.*, 552 U.S. 148 (2008). See Pet. 20. *Stoneridge* held that plaintiffs may not bring a securities-fraud action against third-party non-issuers who allegedly participated in a scheme to defraud where the plaintiffs did not rely on the third party's representations. The Court in *Stoneridge* affirmed the granting of a motion to dismiss, so class certification was not in issue, and the Court did not even hint at whether loss causation is a proper consideration in deciding class certification. Moreover, the non-issuer's "deceptive acts were not communicated to the public" and therefore could not possibly have caused plaintiffs' loss. *Stoneridge*, 552 U.S. at 159.

Next, the Fund contends that the decision below goes beyond requiring loss causation to requiring proof of scienter at the class-certification stage, and is therefore inconsistent with the reasoning of *Merck & Co.* v. *Reynolds*, 130 S. Ct. 1784 (2010). Pet. 24-26. That is patently incorrect. The court of appeals expressly disavowed that the Fund was required to prove scienter or intentional fraud. Pet. App. 123 n.35. Nor did the court of appeals' standard for proving loss causation "effectively requir[e]" that the Fund prove scienter. Pet. 26 n.20. The decision below simply holds that a negative disclosure that does not "reveal the truth of the previously misleading statement is insufficient to establish loss causation." Pet. App. 118. This standard

does not require a "confession" of fraud in the negative disclosure, as the Fund misreads the opinion. Pet. 25. Indeed, the court of appeals has squarely rejected the rule that "a fraud causes a loss only if the loss follows a corrective statement that specifically reveals the fraud." *Flowserve*, 572 F.3d at 230 (O'Connor, J.). And contrary to the Fund's contention, the court of appeals did not impose a "much stiffer standard" than in *Oscar Private Equity* and *Flowserve*. Pet. 11. In fact, the court extensively quoted and applied the standard set forth in those decisions. Pet. App. 117 n.17, 118 n.19, 120 n.26, 122 n.33, 125 n.37, 126-127 nn.40-41, 135 n.51. Because the Fifth Circuit did not require proof of scienter or actual fraud, the Fund is wrong to argue that the decision below is inconsistent with *Merck*. See Pet. 24-25.[10]

---

[10] Besides mischaracterizing the Fifth Circuit's test for loss causation, see also, *supra*, at 21-22 n.7, the Fund rips this Court's recent decision in *Merck* from its context. The Fund deploys *Merck* for the proposition that the Fifth Circuit requires plaintiffs to prove too much before "discovery" takes place. Pet. 24. But *Merck* used the phrase "'discovery' of scienter-related facts," 130 S. Ct. at 1797, in the statute-of-limitations context to refer to the statute's provision that the limitations period starts upon "discovery" of the facts necessary to bring a claim. *Id.* at 1796 (quoting 28 U.S.C. § 1658(b)(1)). *Merck*'s recognition that the limitations period begins to run upon discovery of scienter-related facts obviously offers no support to the Fund's view that it is impossible to prove loss causation before full-blown merits discovery. In any event, despite declaring that it "would be able to establish loss causation" if only it had "full discovery," Pet. 33, the Fund cannot explain why the 600,000 pages of discovery it received was not enough to prove loss causation—a matter proved through "public data and public filings." *Oscar Private Equity*, 487 F.3d at 267. Nor does the Fund identify what additional evidence it could hope to uncover that would prove loss causation when the publicly available data conclusively establishes the contrary. See, *supra*, at 17-21.

C. The Decision below is Consistent with *Eisen* and Federal Rule of Civil Procedure 23.

The Fund also urges that the decision below conflicts with Federal Rule of Civil Procedure 23 and this Court's decision in *Eisen* v. *Carlisle & Jacquelin*, 417 U.S. 156 (1974). See Pet. 33-37. It does not.

The Fund argues that the Fifth Circuit has improperly engrafted a new requirement onto Rule 23. But it was this Court that created the fraud-on-the-market presumption of reliance as one way a plaintiff may satisfy Rule 23(b)(3)'s predominance requirement. In order to invoke the presumption of reliance, the plaintiff must establish certain elements, including that the defendant made material misrepresentations that distorted the integrity of the market price. See *Basic*, 485 U.S. at 247-248. The fact that a plaintiff must make such a showing in order to avail himself of the presumption of reliance does not somehow amend Rule 23. The Fund's position goes too far and is inconsistent with *Basic*.

The Fund's assertion that loss causation is always "common" to class members and therefore is not relevant to class certification similarly rings hollow. Pet. 21. By allowing a defendant to rebut the fraud-on-the-market presumption with "[a]ny showing that severs the link" between the alleged misrepresentation and stock price, 485 U.S. at 248, *Basic* itself recognizes that an absence of loss causation destroys class certification.

In reality, the Fund is upset with *how* the Fifth Circuit interprets the required proof under *Basic*. This argument collapses into the Fund's principal contention that loss causation simply may not be considered prior to class certification. That question cannot be resolved by examining Rule 23, but only by examining *Basic* itself and the interpretive decisions of the courts of appeals. See, *supra*, at 22-25. Contrary to the Fund's claims, the

Fifth Circuit is not alone in considering loss causation "central to the certification decision." Pet. 35 (quoting *Oscar Private Equity*, 487 F.3d at 267). Both the Second and Third circuits consider loss causation prior to class certification as part of determining whether plaintiffs may invoke the presumption of reliance. See, *supra*, at 7-14. And, like the Fifth Circuit, neither of those circuits will certify a class if the preponderance of the evidence demonstrates a lack of loss causation. *Ibid.*

Nor does considering loss causation violate *Eisen*'s prohibition on "conduct[ing] a preliminary inquiry into the merits of a suit in order to determine whether it may be maintained as a class action." 417 U.S. at 177. The Fund concedes that *Eisen* permits "delving into the merits" where "necessary to determine whether the prerequisites under Rule 23 have been met." Pet. 36. Loss causation is just such a merits issue, for the Fund attempted to satisfy Rule 23(b)(3)'s predominance requirement by invoking the fraud-on-the-market presumption. The Second, Third, and Fifth circuits all agree that this required the district court to consider evidence of loss causation in the course of determining whether the Fund could utilize the presumption. See *supra*, at 7-14.[11] As *In re Salomon* explains, a district court is not prohibited from "weigh[ing] conflicting evidence and determin[ing] the existence of a Rule 23

---

[11] The Fifth Circuit's decision in *Bell* v. *Ascendant Solutions, Inc.*, 422 F.3d 307 (5th Cir. 2005), does not aid the Fund. See Pet. 35. There, the court of appeals held that the plaintiff failed to satisfy *Basic*'s requirement to prove market efficiency, and therefore could not invoke the fraud-on-the-market presumption. *Id.* at 314. The court had no occasion to address loss causation. The court, moreover, *rejected* the argument urged by the Fund here, holding that *Eisen* does not prohibit placing the burden on plaintiffs to establish the *Basic* prerequisites at the class-certification stage. *Id.* at 311-314.

requirement just because that requirement is identical to an issue on the merits." 544 F.3d at 484 (quoting *In re Initial Public Offering Sec. Litig.*, 471 F.3d 24, 42 (2d Cir. 2006) (en banc)). Considering loss causation in the context of the fraud-on-the-market presumption does not entail an impermissible inquiry into the merits. The Fund identifies no court of appeals' decision holding to the contrary. See Pet. 36-37.

CONCLUSION

The petition for a writ of certiorari should be denied.

Respectfully submitted.

QUESTIONS PRESENTED

1. Whether the Fifth Circuit correctly held that plaintiffs in private securities fraud actions must at class certification not only satisfy the requirements set forth in *Basic v. Levinson*, 485 U.S. 224 (1988), to trigger a rebuttable presumption of fraud on the market, but must also establish loss causation by a preponderance of admissible evidence.

2. Whether the Fifth Circuit improperly considered the merits of the underlying litigation, in violation of both *Eisen v. Carlisle & Jacquelin*, 417 U.S. 156 (1974), and Federal Rule of Civil Procedure 23, when it held that plaintiffs must establish loss causation at class certification to invoke the fraud-on-the-market presumption.

RULES 14.1(B) AND 29.6 STATEMENTS

Pursuant to Rule 14.1(b), Petitioner states that the Erica P. John Fund, Inc. was known as Archdiocese of Milwaukee Supporting Fund, Inc., until February 11, 2009 when it changed its name to honor its founder. Petitioner further states that the only parties to the proceeding whose judgment is sought to be reviewed other than the individuals and entities identified in the caption are the following individual Plaintiffs:

John Kimble
Lt. Colonel Ben Alan Murphey

Pursuant to Rule 29.6, Petitioner states that it has no parent corporation and no stock.

SUMMARY OF ARGUMENT 23

ARGUMENT 27

A. The Fifth Circuit's Rule Requiring Proof Of Loss Causation At Class Certification Conflicts With This Court's Ruling In *Basic* 27

1. Basic Did Not Grant The Fifth Circuit Discretion To Develop Its Own Fraud-On-The-Market Jurisprudence 31

2. Placing The Burden On Plaintiffs To Establish Loss Causation Negates The Presumption Of Reliance Established in *Basic* 32

3. There Is No Justification For Requiring Proof Of Loss Causation To Trigger The Fraud-On-The-Market Presumption 38

4. Loss Causation Is Not A Test Of The Applicability Of The Fraud-On-The-Market Presumption Or Of Price Distortion At The Time Of A Misrepresentation Or Omission 40

B. The Fifth Circuit's Rule Imposes An Improper And Premature Merits Inquiry In Violation Of *Eisen* And Federal Rule Of Civil Procedure 23 46

1. The Fifth Circuit Imposes At Class Certification A Merits Inquiry Not Required By Rule 23 50

2. Plaintiffs Are Prejudiced By The Requirement That They Establish Loss Causation Without Merits Discovery 52

C. The Fifth Circuit's Rule Constitutes Impermissible Judicial Legislation That Impinges On A Plaintiff's Right To A Jury Trial And Unduly Limits Private Securities Actions 57

1. The Fifth Circuit Rule Was Motivated By Policy Concerns Regarding Class Certification 57

2. Recalibrating The Requirements For A Securities Class Action Is the Role Of Congress, Not The Courts 60

3. The Fifth Circuit's Rule Deprives Plaintiffs Of The Right To A Jury Trial And Requires Plaintiffs To Meet A Higher Standard Of Proof At Class Certification Than At Summary Judgment 62

4. The Fifth Circuit's Rule Would Unduly Restrict Private Securities Actions And Preclude Meritorious Actions 64

CONCLUSION 68

OPINIONS BELOW

The opinion of the court of appeals affirming the district court's denial of class certification is reported at 597 F.3d 330. The district court's opinion denying class certification is unreported.

JURISDICTION

The judgment of the court of appeals was entered on February 12, 2010. A timely petition for a writ of certiorari was filed on May 13, 2010 and granted on January 7, 2011. This Court's jurisdiction is invoked under 28 U.S.C. § 1254(1).

RULES AND STATUTORY PROVISIONS INVOLVED

Federal Rule of Civil Procedure 23 is set out in the Petitioner's Appendix (Pet. App.) at 141a-49a.

INTRODUCTION

In a federal securities action, a private plaintiff must allege and ultimately prove: (1) the defendant made a material misrepresentation or omission; (2) the defendant acted with scienter; (3) a connection between the misrepresentation or omission and the purchase or sale of a security; (4) the plaintiff's reliance on the misrepresentation or omission; (5) economic loss; and (6) loss causation, *i.e.*, that defendant's misconduct proximately caused plaintiff's loss. *See Dura Pharms., Inc. v. Broudo* (*Dura*), 544 U.S. 336, 341-42 (2005).

While a plaintiff must prove those six elements to prevail at trial, in order to certify a class under Federal Rule of Civil Procedure 23, a plaintiff must only meet the requirements of Rule 23, including the requirement that common issues predominate over individual ones. Under common law understandings of fraud, reliance posed an obstacle to certification because reliance was an individual-level phenomenon: some plaintiffs would have read or heard of the misrepresentation, others would not; some would have placed weight on the misrepresentation, others might have disregarded it.

In *Basic Inc. v. Levinson*, 485 U.S. 224 (1988), this Court adopted the fraud-on-the-market theory. Under that theory, the price of a stock incorporates "publicly available information," including "any public material misrepresentations," and an

"investor who buys or sells stock at the price set by the market does so in reliance on the integrity of the market price." *Id.* at 247. That theory allows plaintiffs, upon the requisite showing, to establish a rebuttable presumption of class-wide reliance, thereby overcoming the individual issues that would otherwise prevent certification under a common law view of reliance.

In *Oscar Private Equity Invs. v. Allegiance Telecom, Inc.* (*Oscar*), 487 F.3d 261 (5th Cir. 2007), the Fifth Circuit held that private litigants had to establish loss causation at class certification by a preponderance of the evidence to invoke the fraud-on-the-market presumption, even though reliance and loss causation are separate and distinct elements of a securities claim and even though loss causation will typically turn on common evidence. The Fifth Circuit's holding conflicts with *Basic*, and, because it demands a merits inquiry not required by Rule 23, also conflicts with Rule 23 and *Eisen v. Carlisle & Jacquelin*, 417 U.S. 156 (1974).

No other court agrees with the Fifth Circuit. As Chief Judge Easterbrook wrote for a unanimous panel of the Seventh Circuit, *Oscar* "represents a go-it-alone strategy." *Schleicher v. Wendt*, 618 F.3d 679, 687 (7th Cir. 2010). The judgment of the court of appeals below should be reversed.

STATEMENT OF THE CASE

A. Basic And Oscar

In *Basic*, 485 U.S. at 245-48, this Court held that courts adjudicating private securities fraud cases under Rule 10b-5, 17 C.F.R. 240.10b-5, may presume that members of a proposed class relied on the defendant's allegedly fraudulent, public misrepresentations, provided that the stock in question trades on an efficient market and plaintiffs bought or sold the stock during the relevant time period. That doctrine, establishing a rebuttable presumption of reliance, is known as the "fraud-on-the-market" theory. At the time the Court adopted the theory, all eight courts of appeal that had considered the matter had already reached the same result. *See* Brief for the Securities and Exchange Commission as Amicus Curiae, *Basic Inc. v. Levinson*, 485 U.S. 224 (1988), 1987 U.S. S. Ct. Briefs LEXIS 1151, at *15, *21 n.24.

The Court noted that modern securities markets "differ from the face-to-face transactions contemplated by early fraud cases," and said the market serves as an intermediary between the seller and buyer. *Basic*, 485 U.S. at 243-244. The Court explained:

> An investor who buys or sells stock at the price set by the market does so in reliance on the integrity of that price.

> Because most publicly available information is reflected in market price, an investor's reliance on any public material misrepresentation, therefore, may be presumed for purposes of a Rule 10b-5 action.

Id. at 247. The Court has since affirmed its holding in *Basic* on several occasions. *See, e.g.*, *Stoneridge Inv. Partners LLC v. Scientific-Atlanta, Inc.*, 552 U.S. 148, 159 (2008); *Dura*, 544 U.S. at 342.

In *Oscar*, the Fifth Circuit announced a new and unprecedented requirement for plaintiffs seeking class certification in Rule 10b-5 actions. The Fifth Circuit held that a named plaintiff must establish loss causation, *i.e.*, that a defendant's wrongful conduct caused the plaintiff's injury, by "a preponderance of all admissible evidence" in order to benefit from the fraud-on-the-market presumption of reliance: "Essentially, we require plaintiffs to establish loss causation in order to trigger the fraud-on-the-market presumption." *Oscar*, 487 F.3d at 265, 269. Judge Dennis dissented, declaring: "The majority's decision is, in effect, a breathtaking revision of securities class action procedure that eviscerates *Basic*'s fraud-on-the-market presumption, creates a split from other circuits by requiring mini-trials on the merits of cases at the class certification stage, and effectively overrules legitimately binding circuit precedents." *Id.* at 272 (Dennis, J., dissenting).

The Fifth Circuit justified placing this burden on plaintiffs at class certification partly on perceived policy considerations, noting its concern regarding the "power of the fraud-on-the-market doctrine," which, according to the court, facilitates an "extraordinary aggregation of claims," *id.* at 266-67, as well as what it characterized as the "lethal force of certifying a class of purchasers of securities enabled by the fraud-on-the-market doctrine." *Id.* at 262. The court said it could not "ignore the *in terrorem* power of certification, continuing to abide the practice of withholding until 'trial' a merit inquiry central to the certification decision, and failing to insist upon a greater showing of loss causation to sustain certification." *Id.* at 267.

Oscar relies heavily on *Greenberg v. Crossroads Systems, Inc.*, 364 F.3d 657 (5th Cir. 2004), a summary judgment opinion. There, the Fifth Circuit stated "plaintiffs cannot trigger the presumption of reliance by simply offering evidence of any decrease in price following the release of negative information." *Id.* at 665. Rather, the court held that "[t]o raise an inference through a decline in stock price that an earlier false, positive statement actually affected a stock's price, the plaintiffs must show that the false statement causing the increase was related to the statement causing the decrease." *Id.* While *Greenberg* seemingly requires proof of loss causation to establish the presumption of reliance, the conflation of loss causation and reliance at summary judgment is harmless because plaintiffs in

any event have to make a *prima facie* case as to both elements to raise a triable issue of fact.

To achieve class certification in the Fifth Circuit, the *Oscar* court held that plaintiffs must prove a corrective disclosure is "related" to the prior misstatement and that when "multiple items of negative information were released together with the corrective disclosure," plaintiffs must prove by a preponderance of the evidence "that it is more probable than not that it was this negative statement, and not other unrelated negative statements, that caused a significant amount of the decline in the stock price." *Oscar*, 487 F.3d at 266 (quoting *Greenberg*, 364 F.3d at 666).

The Fifth Circuit decided that loss causation must be demonstrated at class certification even though that determination precedes merits discovery. The Court claimed "[l]ittle discovery from defendants is demanded by the fraud-on-the-market regimen. Its 'proof' is drawn from public data and public filings . . . ." *Id.* at 267.

B. The Complaint

This case is a securities class action brought by the Archdiocese of Milwaukee Supporting Fund, Inc., now known for its founder as the Erica P. John Fund, Inc. ("EPJ Fund"), against the Halliburton Company and David J. Lesar ("Lesar"), its former president and chief operating officer during part of

the class period (collectively, "Halliburton" or "Defendants"). This action was brought on June 3, 2002 on behalf of all purchasers of Halliburton's common stock. The fourth amended complaint, filed on April 4, 2006, alleges that during the class period—June 3, 1999, to December 7, 2001—Defendants violated §§ 10(b) and 20(a) of the Securities Exchange Act of 1934 and SEC Rule 10b-5 by deliberately falsifying Halliburton's financial results and deliberately misleading the public about: (1) its liability for asbestos claims; (2) its probability of collecting revenue on unapproved claims on fixed-price construction contracts; and (3) the benefits of its merger with Dresser Industries ("Dresser"). These allegations were challenged in defendants' motions to dismiss under FED. R. CIV. P. 12(b)(6) and upheld as sufficient to state a claim for relief.

1. Asbestos Allegations

The complaint alleges that Halliburton falsely represented that it had limited asbestos liability and sufficient capital reserves and insurance coverage for its asbestos liability. While Halliburton slowly increased its asbestos reserves during the class period from $25 million on May 15, 2000 to $125 million on November 8, 2001, USCA5 4246, 4596,[1]

---

[1] References to "J.A." are to the Joint Appendix. References to "S A " are to the Supplemental Appendix. References to "Pet App." are to the Appendix submitted with the Petition for a Writ of Certiorari. References to "USCA5" are to the Record.

those reserves paled in comparison to Halliburton's asbestos liabilities. By the end of the class period, the complaint alleges that Halliburton's liability for asbestos claims exceeded $1 billion. *Id.* at 4624. In July 2002, about six months after the end of the class period, Halliburton's asbestos liabilities were at least $2.2 billion, less some "hoped for but uncertain insurance recoveries," and the company took hundreds of millions of dollars of charge-offs/losses. *Id.* at 4603. A few months later, Halliburton revealed it would pay $4 billion to settle asbestos suits/claims, resulting in a $781 million charge to earnings. *Id.*

Most of Halliburton's asbestos liability derived from claims against Harbison-Walker Refractories Company ("Harbison-Walker"), a former subsidiary of Dresser, which Halliburton acquired in 1998 for $7 billion. *Id.* at 4558. On June 28, 2001, Halliburton announced in a press release that Harbison-Walker needed financial assistance with more than 165,000 open claims pending against it, and that the net exposure to Halliburton would be $50-60 million. *Id.* at 4270. Halliburton's stock declined 4.6%. J.A. 250.[2]

On July 25, 2001, Lesar and another Halliburton executive announced during an analyst

---

[2] All changes in stock price are company-specific changes after accounting for market and industry-wide changes

call regarding Halliburton's potential liability for asbestos claims against Harbison-Walker that Halliburton "potential exposure" for "this asbestos litigation" was $60 million after taxes. USCA5 4274. That figure accounted for liability for "discontinued operations," and so included both pending and potential claims against Harbison-Walker. *Id.*

In a September 4, 2001 publication, Lesar stated that the asbestos claims against Halliburton were "manageable" and that Halliburton had a "substantial amount of coverage." *Id.* at 4276. On October 23, 2001, Lesar stated "that there have been no adverse developments at all with respect to the Harbison-Walker situation." *Id.* at 4277-78. On November 8, 2001, Halliburton stated that "open asbestos claims [would] be resolved without a material adverse effect on [Halliburton's] financial position or the results of operations." *Id.* at 4596.

On December 4, 2001, Halliburton released news of several adverse verdicts against Dresser. J.A. 256a. Following a December 7, 2001 announcement of another verdict against Dresser arising out of the operations of its former subsidiary, this time for $30 million, Halliburton's stock plummeted a company-specific 42.7%. *Id.* at 259a-60a.

2. Accounting Allegations

During the class period, Halliburton also booked unapproved claim orders stemming from overages on fixed price contracts as revenue, even though it knew its customers were not likely to pay for these claims. USCA5 4562-63. Prior to mid-1997, Halliburton's customers were generally obligated to pay for cost overruns. In late 1997 Halliburton began entering into large fixed price contracts, with the risk of cost overruns largely falling on Halliburton. *Id.* at 4211. Halliburton told analysts that it would not accept or perform change orders unless the customer agreed up front to pay for the extra work, *i.e.*, it would not incur expenses on unapproved claims. *Id.* at 4222. Ultimately, these fixed price contracts resulted in significant cost overruns and delays, with customers refusing to pay millions of dollars in unapproved claims. *Id.* at 4561.

In response, Halliburton changed its accounting practices, *id.* at 4560, and began counting as revenue the amounts of unapproved claims that were supposedly "probable" of collection. *Id.* at 4562-63, 4604-05. This change in revenue recognition policy was disclosed in Halliburton's 1999 Annual Report, released on March 14, 2000. S.A. 471. There, Halliburton said: "Claims and change orders which are in the process of being negotiated with customers, for extra work or changes in the scope of work are included in revenue when collection is deemed probable." *Id.* At the same time,

Halliburton also announced that its 1998 revenues included $89 million in unapproved claims it contended were probable of collection and that its 1999 revenues included $98 million in unapproved claims. *Id.* Halliburton knew those sums were not probable of collection. USCA5 4608-09. On April 26, 2000, Halliburton released its first quarter results for 2000, which were also falsely inflated by unapproved claims that Halliburton knew were not probable of collection. *Id.* at 4246, 4611.

On October 24, 2000, Lesar announced that Halliburton would undertake a massive restructuring in light of serious operational problems, including cost overruns in its construction operations. *Id.* at 4256-57. The next day, Halliburton's stock dropped 6.6%. J.A. 229a. In a December 21, 2000 press release, Halliburton disclosed its restructuring plan would cost $120 million and released its fourth quarter earnings. *Id.* at 240a-41a; S.A. 519. According to the release, the $120 million restructuring charge was due, in part, to the fact that "negotiations with customers regarding cost increases on seven ... projects have not resulted in resolution of certain claims as originally anticipated." J.A. 242a; S.A. 520. The next day, Halliburton's stock price declined from $37.00 to $36.00, a drop of 3.9%. J.A. 245a.

3. Allegations Regarding Dresser Merger

The complaint further alleges that Halliburton knowingly misrepresented the financial impact of the Dresser acquisition, touting efficiencies it knew would not be realized. For example, on September 13, 1999, a year after the acquisition was complete, an analyst reported that Lesar said regarding the merger, that "following further headcount reductions and significant consolidations, the company is now projecting annual benefits of $500 million." USCA5 4236. However, on October 4, 1999, Halliburton announced that its third-quarter earnings would be less than previously estimated, and that the "Dresser Equipment Group business segment is now significantly underperforming Halliburton's expectations." S.A. 512-13. This news disclosed that Halliburton's previous glowing statements regarding the merger were false, and the stock declined that day by 9%. J.A. 218a.

Halliburton's 1999 Annual Report, released on March 14, 2000, said "[t]he merger with Dresser Industries is now behind us." USCA5 4241. However, on October 24, 2000, Lesar announced Halliburton would undertake a significant restructuring to address several issues, including losses stemming from the Dresser integration and cost overruns on long-term fixed price construction projects. *Id.* at 4256-57. On December 21, 2000, the company disclosed it was taking a $120 million

charge, with $25 million due to losses stemming from the Dresser acquisition and merger, and the stock fell 6.6%. S.A. 519; J.A. 229a.

C. District Court Proceedings

On May 9, 2006, Halliburton moved to dismiss the fourth amended complaint. USCA5 4907. The district court denied that motion on March 28, 2007, *id.* at 6467, and discovery began. On July 9, 2007, Lesar moved for reconsideration following this Court's ruling in *Tellabs, Inc. v. Makor Issues & Rights, Ltd.*, 551 U.S. 308 (2007), regarding the heightened standard required for pleading scienter in private security cases. USCA5 6728. The district court found the complaint satisfied this heightened standard on March 18, 2008. *Id.* at 8469.

On September 17, 2007, the EPJ Fund moved to certify a class of all persons and entities who purchased or acquired common stock of Halliburton during the class period. J.A. 126a-61a. The EPJ Fund provided evidence that the proposed class met the requirements for numerosity, typicality, commonality, and adequacy, as set forth in FED. R. CIV. P. 23(a), and also satisfied the predominance requirement of FED. R. CIV. P. 23(b)(3). *Id.* at 140a-59a. The EPJ Fund invoked the fraud-on-the-market theory to show reliance, *id.* at 147a, and filed the expert report of Jane Nettesheim in support of its class certification motion, *id.* at 163a. In her report, Nettesheim concluded that the market for

Halliburton's stock was efficient, *id.* at 174a, based on her analysis of eleven different factors, the *Cammer*[3]/*Unger*[4]/*Bell*[5] factors, derived from the case law. J.A. 174a-208a. With respect to whether there was a cause and effect relationship between unexpected corporate events or financial releases and the stock price, Nettesheim concluded that the stock price reacted promptly to unexpected news, based on an event study that corrected for market and industry-wide influences through a regression analysis. *Id.* at 184a-198a. In light of *Oscar*, the EPJ Fund also provided evidence, including Nettesheim's report, that the corrective disclosures caused plaintiffs' losses. *See, e.g., id.* at 163a-329a; S.A. 581-83.

Defendants did not challenge the contention that Halliburton's stock trades on an efficient market. J.A. 330a-87a, 549a n.8. Rather, Halliburton argued that the EPJ Fund did not establish loss causation. *See, e.g., id.* at 345a, 375a. Halliburton criticized the EPJ Fund's evidence of loss causation, but did not provide contrary evidence. *See id.* at 446a-537a, 668a-777a. Halliburton never contended that proof of the class members' claims,

including proof of the element of loss causation, would require individualized evidence.

The district court approved the EPJ Fund as the sole class representative, and found "that the Proposed Class satisfied Federal Rule of Civil Procedure 23 as to numerosity, commonality, typicality, and adequacy of [EPJ Fund] as a class representative." Pet. App. 3a. The court denied the motion solely because it found that the EPJ Fund had failed to prove loss causation by a preponderance of the evidence, *id.* at 4a, as required by *Oscar*, 487 F.3d at 265.[6]

D. The District Court's Loss Causation Analysis

The district court admitted that the Fifth Circuit's unique requirement places an "exceedingly high burden on Plaintiffs at an early stage in the litigation," explaining that "the bar is now extremely high for all plaintiffs seeking class certification in securities litigation," but concluded that it was "bound to follow the Fifth Circuit's precedent." Pet App. 7a. Crucially, the requirement that the EPJ Fund prove loss causation was the only barrier to

---

[6] Defendants also contended that the proposed class representatives, the EPJ Fund and Ben Alan Murphey, were not adequate or typical, J A 376a-87a, and filed a motion to strike Nettesheim's expert reports USCA5 7461. The court denied the motion to strike and did not approve Mr Murphey as a class representative.

class certification in this case. The court acknowledged that "[a]bsent this requirement," it "would [have] certif[ied] the class." *Id.* at 4a; *see also id.* at 54a.

The bulk of the court's 37-page opinion is devoted to its loss causation analysis. The court held that the EPJ Fund could "not establish loss causation without *proof* of a revelation of fraud by Halliburton or an indirect revelation of fraud to the market." *Id.* at 41a.[7] In addition, if non-culpable negative news was released contemporaneously with the corrective disclosure, the court held that EPJ Fund "must show that it was 'more probable than not' that the decline in stock price was caused by the corrective portion of the disclosure, rather than the new information." *Id.* at 31a. This is so, the court explained, because "[w]ith respect to mixed disclosures, the plaintiff's burden is heightened—Plaintiffs must separate actual corrective effects from effects of new negative events." *Id.* at 32a.

The court's analysis of the drop in Halliburton's stock on December 7, 2001 is illustrative. On December 4, 2001, Halliburton disclosed that a district court had entered judgment against Dresser on a $65 million Texas jury verdict and also announced three additional judgments

---

[7] Unless otherwise noted, all emphasis is added, and in quotations, all internal quotations and citations are omitted.

against Dresser in the aggregate amount of $35.7 million. S.A. 509. On December 4, Halliburton's stock dropped 3.7%, and on December 5, 3.8%. J.A. 322a. Then, on December 7, 2001, Halliburton issued a press release detailing another judgment—this one a December 5, 2001, verdict against Dresser for $30 million. S.A. 531. Halliburton's stock price immediately plummeted 42.7%, dropping to $12.00 at the close of trading on December 7, 2001, from $20.85 at the close of trading on December 6. J.A. 259a-60a.

Following the December 7 press release, analysts widely reported that it was the adverse news about Halliburton's asbestos liability that drove down its stock price. The verdict announced on December 7 was the proverbial straw that broke the camel's back. One analyst wrote of "the specter of lawsuits spiraling out of control." *Id.* at 257a-58a. Another wrote: "[I]f only 1% of cases resulted in jury verdicts of a similar magnitude and the awards were upheld at the appellate level, the future liability would be significantly greater than our previous expectations." *Id.* at 259a. TheStreet.com reported: "Halliburton Buried as Investors Stopped Believing": "Halliburton's share dove to nine-year lows ... as investors lost faith in the company's claims." USCA5 4577.

However, the district court found that the EPJ Fund had not demonstrated loss causation as to Halliburton's stunning 42.7% stock price drop on

December 7 because it had not disaggregated "the corrective effect resulting from the alleged prior minimization of asbestos liabilities" from "the negative [but non-culpable] effect following the announcement of a new asbestos verdict." Pet. App. 31a.

E. The Fifth Circuit's Opinion

In its FED. R. CIV. P. 23(f) petition,[8] the EPJ Fund stated that the decision denying class certification was likely "dispositive of the litigation, as it is prohibitively expensive for [EPJ Fund] to proceed to final judgment on its individual claims." *Id.* at 77a-78a. Halliburton agreed. *Id.* at 93a, 106a. On December 18, 2008, the Fifth Circuit Court of Appeals accepted the appeal. *Id.* at 108a.

The Fifth Circuit subsequently affirmed the district court's denial of class certification, noting that the EPJ Fund had argued that *Oscar* was contrary to Supreme Court precedent and responding, "Plaintiff may not assail *Oscar* as wrongly decided, as we are bound by the panel decision." *Id.* at 122a, 113a n.2.

Citing *Oscar*, the Fifth Circuit held that to invoke the fraud-on-the-market presumption at the class certification stage, the EPJ Fund had to prove

---

[8] This case has been stayed since the district court denied class certification. Pet. App. 109a, 139a.

loss causation by a preponderance of the evidence: "In order to obtain class certification on its claims, Plaintiff was required to prove loss causation, i.e., that the corrected truth of the former falsehoods actually caused the stock price to fall and resulted in the losses." *Id.* at 113a; *see also id.* at 115a ("Plaintiff must show that an alleged misstatement 'actually moved the market.'"). The court explained that "[t]his showing of loss causation is a 'rigorous process' and requires both expert testimony and analytical research or an event study that demonstrates a linkage between the culpable disclosure and the stock-price movement." *Id.* at 130a.

The Fifth Circuit also held that the plaintiff must show that the "corrective disclosure causing the decrease in price is *related* to the false, non-confirmatory positive statement made earlier, and . . . that it is *more probable than not* that it was this related corrective disclosure, and not any other unrelated negative statement, that caused the stock price decline." *Id.* at 119a-120a (emphasis in original). In addition, the "plaintiffs must prove the corrective disclosure shows the *misleading or deceptive nature* of the prior positive statements." *Id.* at 121a. The corrective disclosure must show the prior misrepresentations or omissions "were *designed to defraud*." *Id.* at 122a.

The court further held that "if a company releases multiple items of negative information on

the same day, the plaintiff must establish a reasonable likelihood that a subsequent decline in stock price is due to the revelation of the truth of the earlier misstatement rather than the release of the unrelated negative information." *Id.* at 117a-118a. The court explained that the plaintiff had to rule out possible, non-culpable explanations for the stock drop, stating it was the plaintiff's burden to show "the subsequent loss could not otherwise be explained by some additional factors revealed then to the market." *Id.* at 118a.

In its analysis, the Fifth Circuit held that EPJ Fund failed to establish loss causation as to Halliburton's statement regarding asbestos liability, *id.* at 124a-29a, its accounting for revenue on unapproved claims, *id.* at 132a-36a, or its projections regarding the benefits of its merger with Dresser, *id.* at 129a-32a. The court found either that the corrective disclosures did not reveal the fraud or that EPJ Fund failed to disaggregate the effect of simultaneously released culpable, negative news and non-culpable, negative news. *See, e.g., id.* at 15a, 19a, 23a, 26a, 29a, 31a, 36a, 41a, 48a, 52a-53a, 125a-135a.

For instance, the court held that Halliburton's June 28, 2001 announcement that Harbison-Walker, Dresser's former subsidiary, needed financial assistance because of its asbestos liability did not constitute a corrective disclosure even though Halliburton announced the news as unexpected, S.A.

523, and the complaint alleged Halliburton knew throughout the class period that Harbison-Walker would need financial assistance. USCA5 4575. The court said: "we can discern no indication from the June 28, 2001 press release that Halliburton's prior asbestos reserve estimates were misleading or deceptive." Pet. App. 126a-127a.

Similarly, the court found that the EPJ Fund had not established loss causation as to Halliburton's December 21, 2000 announcement that it was taking a charge due to restructuring because the EPJ Fund had failed to separate the effects of culpable and non-culpable news. *Id.* at 134a. On that day, Halliburton announced that it was taking a $95 million write off on primarily "project specific matters," and stated that the charge was due in part to the fact that "negotiations with customers regarding cost increases on seven . . . projects have not resulted in resolution of certain claims as originally anticipated." S.A. 520. That announcement suggested that contrary to its prior assertion, *id.* at 471, Halliburton had booked as revenue cost overruns and charges that were not probable of collection. Halliburton also attributed the charge to "the poor near term market outlook for downstream engineering and construction business," *id.* at 519, and the court found the EPJ Fund had failed to parse out the effect of that downturn, Pet. App. 134a-35a, even though EPJ Fund's expert adjusted for industry wide factors in her event study.

The court specifically noted that the "parties do not dispute . . . the efficiency of the market." *Id.* at 115a. The sole basis for the court's ruling was its holding that the EPJ Fund failed to establish loss causation. *Id.* at 136a.

F. The Petition For A Writ Of Certiorari

EPJ Fund filed a timely petition for a writ of certiorari on May 13, 2010. On October 4, 2010, this Court invited the Acting Solicitor General to express the view of the United States. On December 3, 2010, the Acting Solicitor General filed a petition recommending that the Court grant certiorari and also stating that Fifth Circuit opinion erred, *inter alia*, by considering loss causation at the class-certification stage without relating that inquiry to the Rule 23 requirements. This court granted the petition on January 7, 2011.

SUMMARY OF ARGUMENT

In *Oscar*, the Fifth Circuit held that securities fraud plaintiffs must prove loss causation, *i.e.*, that a defendant's alleged misrepresentations are the proximate cause of their economic loss, at class certification in order to invoke the fraud-on-the-market presumption. The issue in this case is not *whether* plaintiffs must establish loss causation but rather *when* they must do so, and whether it is proper to require proof of loss causation at class certification, even when loss causation turns on common evidence. The Fifth Circuit's unique

holding that plaintiffs must to do so at class certification conflicts with *Basic*, *Eisen v. Carlisle Jacqueline*, 417 U.S. 156 (1974), and Federal Rule of Civil Procedure 23.

The Fifth Circuit's requirement nullifies the fraud-on-the-market presumption this Court established in *Basic* by imposing an additional and substantial prerequisite for invoking the presumption. As the Second Circuit held, such a requirement is "a misreading of *Basic*," because "plaintiffs do not bear the burden of showing an impact on price." *In re Salomon Analyst Metromedia Litig.* (*Salomon*), 544 F.3d 474, 481-83 (2d Cir. 2008). The Fifth Circuit ruling also conflicts with *Basic* by holding that the presumption is rebuttable at class certification, when this Court found it was rebuttable at trial. *See Basic*, 485 U.S. at 249 n.29.

The fraud-on-the-market presumption affords plaintiffs a rebuttable presumption of reliance on a class-wide basis, thereby helping establish that common issues—not individualized ones—predominate. Plaintiffs need not establish loss causation, a separate and distinct element of their cause of action, to invoke the fraud-on-the-market presumption. As Chief Judge Easterbrook, writing for the Seventh Circuit in *Schleicher v. Wendt*, 618 F.3d at 679, 687 (7th Cir. 2010), and the Acting Solicitor General's invitation brief both correctly conclude, loss causation is relevant at class

certification only for the predominance inquiry—not for establishing reliance—and then, the only issue is whether proof of loss causation turns on common or individual evidence. Because loss causation focuses on the market's reaction to information and on defendants' conduct, it generally turns on common evidence, as Respondents themselves admit in their supplemental brief at the petition stage. Accordingly, there is no justification for requiring plaintiffs to prove loss causation at class certification.

The Fifth Circuit's holding also violates both *Eisen* and Rule 23, as *Schleicher* and the Acting Solicitor General's brief state, because *Oscar* requires a premature merits inquiry. The proper analysis under Rule 23(b)(3) is how the putative class members will attempt to prove their case—not whether they will ultimately succeed. *See Eisen*, 417 U.S. at 178. Defendants are afforded three opportunities to test the merits of loss causation: a motion to dismiss, summary judgment and trial. The Fifth Circuit cannot unilaterally re-write Rule 23 to provide a fourth opportunity at class certification. The text of Rule 23 and this Court's precedent foreclose that approach.

The Fifth Circuit's rule further compounds the prejudice to plaintiffs by requiring a merits determination without merits discovery. The Fifth Circuit held that "plaintiffs must prove the corrective disclosure shows *the misleading or*

deceptive nature of the prior positive statements" and that "the corrective disclosure more probably than not shows that the original estimates or predictions were *designed to defraud*." Pet. App. 121a-122a. That test effectively requires plaintiffs to establish scienter, and to do so through defendants' corrective disclosures alone. Even at trial, when plaintiffs must prove scienter, they are not limited to doing so through defendants' corrective disclosures alone.

The Fifth Circuit ruling also deprives plaintiffs of their Seventh Amendment right to a jury trial by directing courts to deny certification if plaintiffs fail to establish loss causation by a preponderance of the evidence. In so doing, the Fifth Circuit imposes a higher standard at class certification than pertains at summary judgment, and requires courts to make a merits determination that is not part of their proper role as a gatekeeper to class certification under Rule 23.

Not surprisingly, other courts have uniformly rejected *Oscar*, which, as the Seventh Circuit noted, represents a "go-it-alone strategy," *Schleicher*, 618 F.3d at 687, which this Court should foreclose.

ARGUMENT

A. The Fifth Circuit's Rule Requiring Proof Of Loss Causation At Class Certification Conflicts With This Court's Ruling In *Basic*

There can be no dispute that the Fifth Circuit "require[s] plaintiffs to establish loss causation in order to trigger the fraud-on-the-market presumption." Pet. App. 115a (quoting *Oscar*, 487 F.3d at 265).[9] While the Fifth Circuit claimed its new requirement stemmed from this Court's opinion in *Basic*, that assertion is simply wrong. Nowhere does this Court's decision in *Basic* require proof of loss causation at the class certification stage. Rather, in *Basic*, this Court held a plaintiff may invoke the fraud-on-the-market presumption provided defendants made public misrepresentations, the company's stock traded in an efficient market, and plaintiffs traded shares after the misrepresentation and before the truth was revealed. *See Basic*, 485 U.S. at 241-42, 247-48. This Court has repeatedly reaffirmed its holding. In *Stoneridge Inv. Partners LLC v. Scientific-Atlanta, Inc.*, 552 U.S. 148 (2008), the Court described and reaffirmed its holding in *Basic*: "[U]nder the fraud-

---

[9] *See also Alaska Elec. Pension Fund v. Flowserve Corp.*, 572 F.3d 221, 227-28 (5th Cir. 2009); *Fener v. Operating Eng'rs Constr. Indus. & Misc. Pension Fund (Local 66)*, 579 F.3d 401, 408 (5th Cir. 2009); *Oscar*, 487 F.3d at 269.

on-the-market doctrine, reliance is presumed when the statements at issue become public. The public information is reflected in the market price of the security. Then it can be assumed that an investor who buys or sells stock at the market price relies upon the statement." 552 U.S. at 159; *see also Musick, Peeler & Garrett v. Emp'rs Ins. of Wausau*, 508 U.S. 286, 295 (1993) (citing *Basic* for proposition that 10b-5 action has a "reliance requirement").

In *Dura*, 544 U.S. at 341-42, this Court reaffirmed *Basic* and confirmed that reliance and loss causation are separate and distinct elements of a 10b-5 cause of action. Reliance, often referred to as transaction causation, addresses why a plaintiff bought or sold a stock, while loss causation analyzes the proximate cause of plaintiff's injury. The Court also held that plaintiffs must establish loss causation in order to prevail on the merits of a 10b-5 action, stating:[10]

> In cases involving publicly traded securities and purchases or sales in public securities markets, the action's basic elements include ... (4) reliance,

---

[10] Section 78u-4(b)(4) of the Private Securities Litigation Reform Act of 1995 (PSLRA), 15 U.S.C. § 78u-4 *et seq.*, states "In any private action . . . the plaintiff shall have the burden of proving that the act or omission of the defendant alleged to violate this chapter caused the loss for which the plaintiff seeks to recover damages."

> often referred to in cases involving public securities markets (fraud-on-the-market cases) as 'transaction causation,' *see Basic, supra*, at 248-49, 485 U.S. 224, 108 S. Ct. 978, 99 L.Ed.2d 194 (nonconclusively presuming that the price of a publicly traded share reflects a material misrepresentation and that plaintiffs have relied upon that misrepresentation as long as they would not have bought the share in its absence); ... and (6) 'loss causation,' i.e., a causal connection between the misrepresentation and the loss.

Neither in *Dura* nor any other case has this Court held that loss causation constitutes a prerequisite for invoking the fraud-on-the-market presumption.

The lower courts have repeatedly recognized the conflict between *Basic* and *Oscar*. The Seventh Circuit, in a unanimous opinion written by Chief Judge Easterbrook, held that *Oscar*, in conflict with *Basic*, requires plaintiffs to "prove everything (except falsity) required to win on the merits" before a class could be certified. *Schleicher*, 681 F.3d at 683. Imposing such a standard, the court noted, "would make certification impossible in many securities cases." *Id.* at 686.[11]

---

[11] Accordingly, the issue in this case is not, as Respondents contend, "whether certain meritless class actions should be

In *Salomon*, defendants argued that "the district court erred by not placing the burden on plaintiffs to prove that the alleged misrepresentations [by analysts] 'moved the market,' i.e., had a measurable effect on the stock price." 544 F.3d at 482. The Second Circuit rejected that argument because "plaintiffs do not bear the burden of showing an impact on price." *Id.* at 483. The court ruled that defendants' argument was "a misreading of *Basic*," *id.* at 482, and held that the requirements outlined in *Basic* are "all that is needed to warrant the presumption," *id.* at 481. According to the court, "[t]he point of *Basic* is that an effect on market price is *presumed* based on the materiality of the information and a well-developed market's ability to readily incorporate that information into the price of securities." *Id.* (emphasis in original).

Every district court outside of the Fifth Circuit that has addressed the holding in *Oscar* has declined to adopt it. *Oscar* has been rejected, disagreed with, distinguished, or simply not followed by district courts in the First, Second, Fourth, Sixth, Ninth, Tenth, and Eleventh circuits. *See* Pet. at 15-17.

---

certified." Respondents' Supplemental Brief at 5, *Erica P John Fund, Inc., fka Archdiocese of Milwaukee Supporting Fund, Inc. v Halliburton Co.*, No 09-1403 (Dec 14, 2010) (Respondents' Supplemental Brief).

1. *Basic* Did Not Grant The Fifth Circuit Discretion To Develop Its Own Fraud-On-The-Market Jurisprudence

In *Oscar*, the Fifth Circuit claimed *Basic* "'allows each of the circuits room to develop its own fraud-on-the-market rules.'" *Oscar*, 487 F.3d at 264. That approach is at odds with the principal that federal statutes should be uniformly interpreted and applied—a standard this Court has long striven to uphold. *See Williams v. Taylor*, 529 U.S. 362, 389-90 (2000) ("well-recognized interest in ensuring that federal courts interpret federal law in a uniform way"); *Mississippi Band of Choctaw Indians v. Holyfield*, 490 U.S. 30, 43 (1989) ("federal statutes are generally intended to have uniform nationwide application").

Neither *Basic* nor any other opinion of this Court grants the Fifth Circuit *carte blanche* to "tighten" the requirements for invoking the fraud-on-the-market presumption, which Congress has never seen fit to do in the more than twenty years since *Basic* was decided. *See Schleicher*, 618 F.3d at 686 ("Unlike the fifth circuit, we do not understand *Basic* to license each court of appeals to set up its own criteria for certification of securities class actions or to 'tighten' Rule 23's requirements.").

2. Placing The Burden On Plaintiffs To Establish Loss Causation Negates The Presumption Of Reliance Established in *Basic*

Basic established a rebuttable presumption of class-wide reliance on defendants' public, allegedly fraudulent misrepresentations (or omissions), provided that the stock trades in an efficient market and plaintiffs bought or sold the stock between the time of the statement and corrective disclosure. *Basic*, 486 U.S. at 241-42, 246-47. The *Oscar* court adds an additional and substantial prerequisite: proof of loss causation. The *Oscar* court declared that it was not "improperly shift[ing] the burden, from a defendant's right of rebuttal to a plaintiff's burden of proof" because, "[a]s a matter of practice, the oft-chosen defensive move is to make '*any* showing that severs the link' between the misrepresentation and the plaintiff's loss; to do so rebuts on arrival the plaintiff's fraud-on-the-market theory." 487 F.3d at 265 (emphasis in original). That contention is wrong for several reasons.

First, the Fifth Circuit's ruling negates the presumption established by this Court in *Basic* without requiring any contrary showing by defendants. Instead of putting defendants to the task of rebutting the fraud-on-the-market presumption, the Fifth Circuit's rule immediately places the burden on plaintiffs to prove loss causation, thereby eviscerating the holding in *Basic*

and rendering the fraud-on-the-market presumption dead on arrival. *See id.* at 276 (Dennis, J., dissenting) ("Under the majority's approach, *Basic*'s fraud on the market presumption is essentially a dead letter, little more than a quaint reminder of earlier times. . . .").

Requiring proof of loss causation to establish reliance "subverts the fraud-on-the-market presumption by requiring the plaintiffs to prove, as a precondition to the application of the presumption, the very facts that are to be presumed under *Basic* (*i.e.*, that the defendant's material misrepresentation was reflected in the stock price)." *Id.* at 274 (Dennis J., dissenting). Thus, the Fifth Circuit rule essentially eliminates the presumption in contravention of *Basic*, where this Court said: "Because most publicly available information is reflected in market price, an investor's reliance on any public material misrepresentations, therefore, may be *presumed* for purposes of a Rule 10b-5 action." *Basic*, 485 U.S. at 247; *see id.* ("[W]here materially misleading statements have been disseminated into an impersonal, well-developed market for securities, the reliance of individual plaintiffs on the integrity of the market price may be *presumed*.").

Second, by nullifying the presumption, the Fifth Circuit also undermines the reasons the Court gave in *Basic* for adopting the presumption. This Court held that presumptions are useful when

"direct proof" is "difficult", adding that "[r]equiring a plaintiff to show a speculative state of facts, *i.e.*, how he would have acted if omitted material information had been disclosed, or if the misrepresentation had not been made, would place an unnecessarily unrealistic evidentiary burden on the Rule 10b-5 plaintiff who has traded on an impersonal market." *Id.* at 245. But, contrary to this Court's decision, the Fifth Circuit used the presumption to impose an additional and "exceedingly high burden" on plaintiffs seeking class certification. Pet. App. 71. In *Basic*, this Court explained that the presumption furthered Congress' intent in enacting the 1934 Act: "In drafting that Act, Congress expressly relied on the premise that securities markets are affected by information, and enacted legislation to facilitate an investor's reliance on the integrity of those markets." *Basic*, 485 U.S. at 245-46. The Fifth Circuit's rule, however undermines investor reliance on the integrity of the market because it established an additional and unnecessary hurdle before an investor may bring an action in reliance on the integrity of the market. In *Basic*, this Court said that the presumption is "supported by common sense and *probability*," noting that "[r]ecent empirical studies have tended to confirm Congress' premise that the market price of shares traded on well-developed markets reflects all publicly available information, and, hence, any material misrepresentations." *Id.* at 246. By contrast, in substituting its judgment for that of this Court, the Fifth Circuit required near economic certainty before

the presumption applies: proof established by a preponderance of the evidence that any drop in the stock price in a specific case was due to a corrective disclosure.

Third, while defendants can challenge at class certification plaintiffs' evidence of market efficiency, *Basic* establishes that the proper time to rebut the presumption of reliance itself—a quintessential merits issue—is at *trial*, *not* class certification: "Proof of that sort is a matter for trial, throughout which the District Court retains the authority to amend the certification order as may be appropriate." *Id.* at 249 n.29; *see also In re PolyMedica Corp. Sec. Litig.*, 432 F.3d 1, 7 n.10 (1st Cir. 2005) ("defendant may still rebut this presumption at trial"); *Kaplan v. Rose*, 49 F.3d 1363, 1378 n.3 (9th Cir. 1994) ("the ultimate resolution of this question is an issue for trial").

Fourth, even assuming the presumption could be rebutted at class certification, which is contrary to *Basic*, the presumption does not dissolve in the face of any contrary evidence, as the Fifth Circuit suggests. Rather, any contrary showing must be sufficient to undermine the presumption or, in the words of this Court, to "sever[]" it. *Basic*, 485 U.S. at 248. As this Court said: "Any showing that *severs* the link between the alleged misrepresentation and either the price received (or paid) by the plaintiff, or his decision to trade at a fair market price, will be sufficient to rebut the presumption of reliance." *Id.*

This Court placed the burden of both production and persuasion on defendants, stating that the presumption could be rebutted if defendants "could show . . . the market price *would not have been affected* by their misrepresentations." *Id.* at 248. This Court reinforced this point by its reference to the commentary to Rule 301 of the Federal Rules of Evidence, which states in pertinent part: "Presumptions governed by this rule are given the effect of placing upon the opposing party the burden of establishing the nonexistence of the presumed fact, once the party invoking the presumption establishes the basic facts giving rise to it." FED. R. EVID. 301 advisory committee's note.[12]

Under FED. R. EVID. 301, if the defendant meets its "burden of going forward with evidence to rebut or meet the presumption," then the trier of fact must determine whether the plaintiff has met its burden of persuasion. That determination is a classic merits inquiry and has no bearing on class certification.[13]

---

[12] *See also ITC Ltd. v. Punchgini, Inc.*, 482 F.3d 135, 149 (2d Cir. 2007); 21B CHARLES ALAN WRIGHT & KENNETH W. GRAHAM, JR., FEDERAL PRACTICE AND PROCEDURE § 5126 (2d ed. 2010); JACK B. WEINSTEIN & MARGARET A. BERGER, WEINSTEIN'S FEDERAL EVIDENCE § 301.02[3][c] (2d ed. 2006).

[13] The Fifth Circuit also justified its requirement by reference to a theoretical possibility that the market for a given security might be inefficient or strong-form efficient with respect to a particular type of information. *Oscar*, 487 F.3d at 269-70.

Because it will be a rare case in which defendants cannot present some contrary evidence, a presumption that dissolves in the face of any contrary evidence would be essentially the same as no presumption at all. *See Oscar*, 487 F.3d at 274 (Dennis, J. dissenting) ("[I]n the majority's view, the *Basic* presumption evaporates as soon as a defendant simply introduces a mere possibility the defendant's material misrepresentation might not have affected the market price."). Thus, under the Fifth Circuit's interpretation, the presumption established by *Basic* becomes virtually pointless, contrary to this Court's reasoning in *Basic*. *See Basic*, 485 U.S. at 245 ("Presumptions typically serve to assist courts in managing circumstances in which direct proof, for one reason or another, is rendered difficult."); *id.* ("[P]resumptions are also useful devices for allocating the burdens of proof between parties."); *see also U.S. Dep't of Justice v. Landano*, 508 U.S. 165, 175 (1993).

That theoretical possibility does not justify negating the presumption, which is grounded in "probability," *see Basic*, 485 U.S. at 246, not certainty

3. There Is No Justification For Requiring Proof Of Loss Causation To Trigger The Fraud-On-The-Market Presumption

The Fifth Circuit fails to explain why proof of loss causation is necessary to trigger the fraud-on-the-market presumption or is otherwise necessary at class certification.

The presumption of class-wide reliance on the market price is relevant at class certification only for determining whether plaintiffs can establish reliance through common evidence and so whether common issues predominate for purposes of FED. R. CIV. P. 23(b)(3). *See Basic*, 485 U.S. at 228. The existence of an efficient market establishes a presumption of class-wide reliance based on common facts and avoids the need for a class member by class member analysis of reliance on particular misrepresentations.

Loss causation is distinct from reliance and is not a prerequisite for establishing the fraud-on-the-market presumption. In *Basic*, this Court affirmed the trial court's class certification order, which was based on the fraud-on-the-market presumption, even though the plaintiff in that case did not establish loss causation at class certification. *See Basic*, 485 U.S. at 228, 250. Unlike reliance, loss causation is normally a matter determined by common facts and should not be an issue at class certification. When

loss causation rests on common evidence, as is usually the case and as is the case here, loss causation is purely a merits inquiry that should be addressed at summary judgment or at trial:

> After a class has been certified, and other elements of the claim have been established, the court will need to pin down when the stock's price was affected by any fraud. That decision, like the other issues, can be made on a class-wide basis, because it affects investors in common. It gets the cart before the horse to insist that it be made before any class can be certified.

Schleicher, 618 F.3d at 687 (emphasis in original); *see also In re Initial Pub. Offering Sec. Litig.*, 260 F.R.D. 81, 106 n.214 (S.D.N.Y. 2009.) ("It is sufficient [at class certification] for plaintiffs to prove only that loss causation can be shown on a class-wide basis."); Brief for the United States as Amicus Curiae [U.S. Invitation Br.] at 9, *Erica P. John Fund, Inc., fka Archdiocese of Milwaukee Supporting Fund, Inc. v. Halliburton Co.*, No. 09-1403 (Dec. 3, 2010) ("[T]he only relevant question at the class-certification stage is whether resolution of the loss-causation issue can be expected to turn on proof that is common to class members generally."); John C. Coffee Jr., *Securities Litigation: The Year Ahead*, 245 N.Y.L.J. 5 (Jan. 20, 2011) ("loss causation relates to the efficient market's reaction to the

corrective disclosure; this is really a common issue, rather than an individual issue"); Donald C. Langevoort, *Basic at Twenty: Rethinking Fraud On The Market*, 2009 WIS. L. REV. 151, 162 (2009) ("Plainly, showing market impact is the plaintiff's burden on the merits, but it is unclear why this should be a class-certification issue: marketplace impact is an issue common to the class rather than anything having to do with individualized reliance or nonreliance.").

4. Loss Causation Is Not A Test Of The Applicability Of The Fraud-On-The-Market Presumption Or Of Price Distortion At The Time Of A Misrepresentation Or Omission

The Fifth Circuit erroneously concluded that plaintiffs who cannot establish loss causation at class certification are not entitled to invoke the fraud-on-the-market presumption. Not only does that conclusion conflict with this Court's ruling in *Basic*, it also rests on a misunderstanding of the relationship between reliance and loss causation.

To begin with, applicability of the fraud-on-the-market-presumption turns on whether the market is efficient, not on whether plaintiffs can establish loss causation. "[N]early every court that has considered the proposition has concluded that where materially misleading statements have been

disseminated into an impersonal, well-developed market for securities, the reliance of individual plaintiffs on the integrity of the market price may be *presumed*." *Basic*, 485 U.S. at 247; *see also Salomon*, 544 F.3d at 481 ("The point of *Basic* is that an effect on market price is *presumed* based on the materiality of the information and a well-developed market's ability to readily incorporate that information into the price of securities.") (emphasis in original). And while plaintiffs cannot recover for misrepresentations that did not affect the market price, whether or not a misrepresentation affected the stock price—either by inflating the price or keeping the price from falling—is a merits analysis not relevant to the Rule 23 analysis. As the Seventh Circuit said, "[i]t is possible to certify a class under Rule 23(b)(3) even though all statements turn out to have only trivial effect on prices. Certification is appropriate but the class will lose on the merits." *Schleicher*, 618 F.3d at 685.[14]

---

[14] In a unanimous ruling, this Court defined materiality as information that would be important, in the total mix of information, to a reasonable investor. *Basic*, 485 U.S. at 231-32 ("[T]o fulfill the materiality requirement 'there must be a substantial likelihood that the disclosure of the omitted fact would have been viewed by the reasonable investor as having significantly altered the total mix of information made available.'"), *id.* at 250 (White, J., concurring in part and dissenting in part) ("I agree that the standard of materiality we set forth in *TISC Indus., Inc. v. Northway, Inc.*, 426 U.S. 438, 449, 96 S. Ct. 2126, 2132, 48 L.Ed. 2d 757 (1976), should be applied to actions under §10(b) and Rule 10b-5."). The Court

Moreover, because reliance and loss causation are distinct concepts, whether plaintiffs can establish reliance does not depend on whether they can establish loss causation. For instance, plaintiffs cannot necessarily establish loss causation even as to a misrepresentation (or omission) that unquestionably inflated the price of the stock (or kept the price from falling). This is because an intervening cause could have removed the price inflation before the corrective disclosure was made, thereby breaking the causal link between misrepresentation and corrective disclosure. Under the fraud-on-the-market theory of reliance endorsed by this Court in *Basic*, plaintiffs are entitled to a rebuttable presumption that they relied on the

---

eschewed any bright line rule and instead selected a fact-based test. *See id.* at 236 ("Any approach that designates a single fact or occurrence as always determinative of an inherently fact specific finding such as materiality, must necessarily be overinclusive or underinclusive"); *see also Virginia Bankshares, Inc v. Sandberg*, 501 U.S. 1083, 1097 (1991) (materiality depends on what is "significant enough to be important to a reasonable investor"); *see also TISC Indus.*, 426 U.S. at 450 ("The determination [of materiality] requires delicate assessments of the inferences a 'reasonable shareholder' would draw from a given set of facts and the significance of those inferences to him, and these assessments are peculiarly ones for the trier of fact.")

integrity of the market price and indirectly on the misrepresentations (or omissions) that were incorporated into the market price *when those misrepresentations were made*. Loss causation, by contrast, largely depends on what happens to the stock price at the time of the corrective disclosure.

This Court made that very point in *Dura* when it struck down the Ninth Circuit's rule that loss causation was demonstrated by showing that "the price *on the date of purchase* was inflated because of the misrepresentation." 544 U.S. at 342 (emphasis in original). The Court held that the Ninth Circuit's "statement of the law is wrong" since "[n]ormally, in cases such as this one (*i.e.*, fraud-on-the-market cases), an inflated purchase price will not itself constitute or proximately cause the relevant economic loss." *Id.* As the Court explained, price distortion at the time of the misrepresentation or omission is not the determining factor in establishing loss causation. *See id.* at 342-43. "[A]s a matter of pure logic, at the moment the transaction takes place, the plaintiff has suffered no loss; the inflated purchase payment is offset by ownership of a share that *at that instant* possesses equivalent value." *Id.* at 342. The Court explained that assuming the plaintiff later sells its stock for a loss, the key for loss causation is determining the cause of that loss. "[T]hat lower price may reflect, not the earlier misrepresentation, but changed economic circumstances, changed investor expectations, new industry-specific or firm-specific facts, conditions, or

other events, which taken separately or together account for some or all of that lower price." *Id.* at 343.

In *Schleicher*, the Seventh Circuit also demonstrated that a plaintiff's inability to prove loss causation at class certification does not mean that the price of the stock was not inflated by a misrepresentation or that some class members were not injured. 618 F.3d at 686-87. In the court's example, a lie on September 1 boosted the stock's price by $1, and by October 1 professional investors had discounted the issuer's statement as false, and the stock quickly lost the $1 gained because of the fraud. *Id.* at 687. The court noted that if the issuer made a corrective disclosure on November 1, the stock price would not move. *Id.* In the Seventh Circuit's example, depriving plaintiffs of the fraud-on-the-market presumption because they could not prove at class certification that the truth leaked out prior to the defendant's known corrective disclosure would lead to the denial of certification and an unjust result. Rather, the court said that "[a]fter a class has been certified, and other elements of the claim have been established, the court will need to pin down *when* the stock's price was affected by any fraud." *Id.* (emphasis in original); *see also* U.S. Invitation Br. at 20 n.3 (discussing footnote 29 in *Basic* and stating: "That analysis suggests that, if the evidence ultimately demonstrates that the distortive effect of a defendant's misstatements was cured as of a particular date, a class certification

order may be amended to exclude class members who purchased or sold shares after that date.").

As a result, even if *Basic* were read to permit an analysis of initial price distortion as part of the class certification inquiry, affirmative proof of loss causation should not be required at that stage. The Second Circuit's ruling in *Salomon*, which permits a defendant to rebut the presumption of reliance by showing there was no price distortion in the first place, is not to the contrary. *See Salomon*, 544 F.3d at 483 ("[T]he burden of showing that there was no price impact is properly placed on defendants at the rebuttal stage."). Any such "price impact" would have occurred at the time of the misstatement or omission. Loss causation, by contrast, concerns whether a subsequent corrective disclosure caused plaintiffs' loss. Thus, the Second Circuit does not permit a defendant to rebut the fraud-on-the-market presumption by showing a lack of loss causation, as Halliburton contends, Respondents' Supplemental Brief at 2-3, let alone require affirmative proof of loss causation from the plaintiff.

Moreover, the Second Circuit ruling is misguided. *Basic* held that plaintiffs may establish reliance on a class-wide basis and satisfy the predominance requirement of Rule 23 by establishing that the stock traded on an efficient market, provided the defendants made public misrepresentations and plaintiffs bought or sold the stock during the relevant interval. *Basic* did not

hold that plaintiffs must prove at class certification that reliance in fact took place—that question is for trial. Therefore, there is no reason to give the defendant an opportunity at class certification to rebut an element—actual reliance—which plaintiffs do not have to prove until trial. Any contention to the contrary rests on a confusion and conflation of the requirements for class certification and for ultimately prevailing on the merits.

B. The Fifth Circuit's Rule Imposes An Improper And Premature Merits Inquiry In Violation Of *Eisen* And Federal Rule Of Civil Procedure 23

To certify a class, plaintiffs must demonstrate that they satisfy the prerequisites of FED. R. CIV. P. 23(a): numerosity, commonality, typicality and adequacy. In damage actions, plaintiffs must also demonstrate that "questions of law or fact common to class members predominate over any questions affecting only individual members." Pet. App. 142a. Provided these requirements are met, the class should be certified. *See Shady Grove Orthopedic Assocs., P.A. v. Allstate Ins. Co.*, 130 S. Ct. 1431, 1437 (2010) (Rule 23 "[b]y its terms . . . creates a categorical rule entitling a plaintiff whose suit meets the specified criteria to pursue his claim as a class action").

In the Fifth Circuit alone, for a damages case brought under federal securities laws, plaintiffs

must also demonstrate loss causation. By imposing that added requirement, which the Fifth Circuit admits entails a "merit inquiry," *Oscar*, 487 F.3d at 267, the Fifth Circuit ruling conflicts with Rule 23 and *Eisen*, where this Court held that "nothing in either the language or history of Rule 23 . . . gives a court any authority to conduct a preliminary inquiry into the merits of a suit in order to determine whether it may be maintained as a class action." 417 U.S. at 177. While *Eisen* was initially construed as a blanket prohibition against consideration of the merits of the underlying claims at class certification, courts have since interpreted *Eisen* to prohibit examination of the merits except insofar as necessary to determine whether the Rule 23 prerequisites have been met. *See, e.g., In re Initial Pub. Sec. Offerings Litig.*, 471 F.3d 24, 41 (2d Cir. 2006) ("[A] district judge should not assess any aspect of the merits unrelated to a Rule 23 requirement. . . .").

The issue here is not whether plaintiffs must establish loss causation by a preponderance of the evidence. They must—at trial. The issue is whether they must also do so, without merits discovery, at class certification, even though the Fifth Circuit has not tied that requirement to Rule 23. *See Eisen*, 417 U.S. at 178 ("In determining the propriety of a class action, the question is not whether the plaintiff or plaintiffs have stated a cause of action or will prevail on the merits, but rather whether the requirements of Rule 23 are met.").

Trial courts must make a rigorous determination of whether the FED. R. CIV. P. 23 prerequisites are satisfied. In cases involving the fraud-on-the-market presumption, that means determining whether plaintiffs have met the requirements for invoking the presumption, in particular by showing that the market in question is efficient, because that is crucial to showing common issues predominate.[15] Plaintiffs, however, do not have to demonstrate at class certification that they are likely to prevail on the merits as to any element of their cause of action, including reliance and loss causation. Just as antitrust plaintiffs must establish at class certification that their claim of class-wide injury depends on common evidence, but not that they will prevail on the merits in showing injury, federal securities plaintiffs must establish for certification that their claim of class-wide reliance rests on common evidence, not that their reliance claim will ultimately prove successful. *See In re Hydrogen Peroxide Antitrust Litig.*, 552 F.3d 305, 311-12 (3d Cir. 2008) ("Plaintiffs' burden at the class certification stage is not to prove the element of antitrust-impact," but only "to demonstrate that the element of antitrust impact is capable of proof at

---

[15] Following *Basic*, courts find individual issues predominate when plaintiffs cannot demonstrate market efficiency. *See, e.g., In re Initial Pub. Offering Sec. Litig.*, 471 F.3d 24 (shares of initial public offerings cannot trade on an efficient market), *Binder v. Gellepsie*, 184 F.3d 1059 (9th Cir. 1999) (securities traded over the counter or on "pink sheets").

trial through evidence that is common to the class rather than individual to its members").

Under Rule 23, certification of a class is proper—provided the other prerequisites are met, as they were in this case—when common issues predominate. A plaintiff proves loss causation by showing that the corrective disclosure, and not some other event, caused the decline in the stock price. Facts necessary for such proof are usually general; they do not depend on how particular investors behave or what they believe. Neither court below stated that establishing loss causation (or its absence) required an individualized inquiry and could not be established through common evidence. Even assuming that whether a particular misstatement or omission moved the stock price were relevant to the application of the fraud-on-the-market presumption—which it is not—the Fifth Circuit's approach is flawed because that question will turn on evidence common to all members of the proposed class. In such instances, loss causation will either exist for the whole class, or for no one, as Respondents admit. *See* Respondents' Supplemental Brief at 9 (acknowledging "loss causation stands or falls on a classwide basis"). Accordingly, there is no justification for examining the merits of loss causation at class certification.

1. The Fifth Circuit Imposes At Class Certification A Merits Inquiry Not Required By Rule 23

By requiring proof of loss causation at class certification, the Fifth Circuit has done precisely what *Eisen* and Rule 23 prohibit: "requir[ed] mini-trials on the merits of cases at the class certification stage." *Oscar*, 487 F.3d at 272 (Dennis, J., dissenting). The Fifth Circuit does not limit merits determinations at class certification to those related to the Rule 23 prerequisites; rather, it requires plaintiffs to prove almost their entire case. *See Schleicher*, 618 F.3d at 683 ("before a class can be certified [under *Oscar*] plaintiffs must prove everything (except falsity) required to win on the merits"); U.S. Invitation Br. at 11 ("[T]he court of appeals erred at the outset by going beyond Rule 23 criteria and assessing the putative class members' ability to prove their case on the merits."). The extended analysis of loss causation in both the district court and Fifth Circuit—an analysis that encompasses virtually the entire substance of both opinions—demonstrates that this is a quintessential merits examination, one reserved for a jury provided plaintiff establishes a prima facie case. "[L]oss causation has been compared to 'the tort concept of proximate cause, *Emergent Capital Inv. Mgmt., LLC v. Stonepath Group*, Inc., 195 F. Supp.2d 551, 559 (S.D.N.Y. 2002), and [p]roximate cause is a classic jury question." *Smith v. New York Enter. America, Inc., SW*, No. 06 Civ. 3082(PKL), 2008 WL 2810182,

at *6 (S.D.N.Y. July 21, 2008) (quoting *Southard v. Eight Ball, Inc.*, No. 96 Civ. 5542, 1997 WL 391123, at *14 (S.D.N.Y. July 11, 1997)); *see also Lentell v. Merrill Lynch & Co., Inc.*, 396 F.3d 161, 174 (2d Cir. 2005) ("[l]oss causation is a fact-based inquiry").

In *Oscar*, the Fifth Circuit defends its holding by citing the 2003 amendment to Rule 23, which required determination of class certification "at an early practicable time," instead of "as soon as practicable." *See Oscar*, 487 F.3d at 267. Even after the 2003 revisions, however, it is improper for a court to undertake at class certification a merits inquiry—whether for proof of loss causation, scienter, or materiality—which does not overlap with a determination of one of the prerequisites of Rule 23. *See* FED. R. CIV. P. 23(c)(1)(A) advisory committee's note (2003 amendments) (noting "an evaluation of the probable outcome on the merits is not properly part of the certification decision"). Equally unavailing is the fact that Rule 23 no longer says a class certification ruling "may be conditional." *Id.* "Even after a class certification order is entered, the judge remains free to modify it in light of subsequent developments in the litigation." *See Gen. Tel. Co. of Southwest v. Falcon*, 457 U.S. 147, 160 (1982). While the district court must determine that the prerequisites for class certification have been met, that does not justify grafting a merits inquiry onto a proper Rule 23 analysis

2. Plaintiffs Are Prejudiced By The Requirement That They Establish Loss Causation Without Merits Discovery

This case was the subject of multiple motions to dismiss and multiple amended complaints before the district court denied defendants' motion to dismiss the fourth amended complaint, more than four and one half years after the initial complaint was filed. In any court other than the Fifth Circuit, the EPJ Fund would not face a new merits hurdle until summary judgment. There is no justification for subjecting private plaintiffs in security actions in the Fifth Circuit to such a unique disadvantage.

The loss causation analysis by the courts below illustrates why plaintiffs need merits discovery to establish loss causation. On December 20, 2000, Halliburton announced in a company press release that it was taking a $95 million charge that was due in part to the fact that "negotiations with customers regarding cost increases on seven . . . projects have not resulted in resolution of certain claims as originally anticipated." S.A. 520. Even though the face of the announcement showed that the $95 million charge was related to contractual claims that had not been resolved as the company "originally anticipated," thereby calling into question the company's prior assertion that it would only book unapproved claims when probable of collection, *id.* at 471, the Fifth Circuit found that the EPJ Fund had

not established loss causation. The court said that the announcement included non-culpable negative news and concluded the EPJ Fund failed to parse the effect of the culpable from the non-culpable news, which Halliburton had packaged together. Pet. App. 134a. With merits discovery, the EPJ Fund could have looked behind the announcement, determined how much of the charge was related to cost overruns on long-term fixed price contracts and whether the other restructuring charges were related to problems with such contracts. The district court noted that Halliburton in its announcement attributed these cost overruns to "changes in market conditions, specifically labor disturbances in Venezuela and West Africa." *Id.* at 35a. With merits discovery, the EPJ Fund could test that assertion and determine the degree to which overruns were actually due to labor disturbances. Finally, Halliburton argued to the Fifth Circuit that "[t]here is no indication at all that these additional costs . . . had anything to do with unapproved claims previously recognized as revenue." Appellees' (Respondents') Brief to the Fifth Circuit Court of Appeals at 53. Again, with merits discovery the EPJ Fund could have determined whether there was such a connection.

The prejudice to plaintiffs is exacerbated by the fact that the Fifth Circuit effectively requires proof of scienter in order to establish loss causation

at class certification.[16] *See, e.g.*, Pet. App. 121a-22a (holding that "plaintiffs must prove the corrective disclosure shows *the misleading or deceptive nature* of the prior positive statements" and that "the corrective disclosure more probably than not shows that the original estimates or predictions were *designed to defraud*.").[17] As this Court recently explained, evidence of scienter is different from evidence of falsity, and so may require additional discovery. *Merck & Co., Inc. v. Reynolds*, 130 S. Ct. 1784, 1796-97 (2010).

Even at trial, plaintiffs do not have to establish scienter though a corrective disclosure that "shows the misleading or deceptive nature of the prior positive statements." Pet. App. 121a-22a. Rather, plaintiffs may establish scienter through direct or circumstantial evidence that the defendants knew or were reckless in not knowing that their

---

[16] Scienter, of course, turns on defendants' conduct and so is common to the class.

[17] While the Fifth Circuit stated in a footnote that "a plaintiff need not prove at the class certification stage intentional fraud by the defendant," *id.* at 123a n.35, the court effectively required proof of scienter to establish loss causation. *See, e.g.*, *id.* at 126a (did not show "prior reserve estimates were intentionally misleading"); *id.* at 126a-27a ("no indication [prior estimates] were misleading or deceptive"; *id.* at 129a ("undermines any conclusion . . the company acted with deception"); *id* at 132a ("Plaintiff fails to show these announcements . revealed deceptive practices in Halliburton's accounting assumptions").

assertions at issue were false at the time they made them. *See, e.g., Herman & MacLean v. Huddleston*, 459 U.S. 375, 390 n.30 (1983); *Alpern v. UtiliCorp United, Inc.*, 84 F.3d 1525, 1536-37 (8th Cir. 1996); *In re Software Toolworks, Inc.*, 50 F.3d 615, 627 (9th Cir. 1994). The Fifth Circuit, however, imposes a more demanding test of scienter at class certification than pertains at trial.

The impact of the Fifth Circuit's loss causation requirement is readily apparent here. Most of Halliburton's asbestos liability derived from claims against Harbison-Walker, a former subsidiary of Dresser, which Halliburton acquired in 1998 for $7 billion. USCA5 4558. On June 28, 2001, the Fifth Circuit held that Halliburton's June 28, 2001 announcement that Harbison-Walker, Dresser's former subsidiary, had sought financial assistance to pay its pending asbestos claims was not a corrective disclosure because the June 28, 2001 announcement did not indicate that Halliburton *knew* of Harbison-Walker's financial difficulties prior to the announcement. Pet. App. 125a-27a. The court disregarded the allegation in the complaint that Halliburton knew throughout the class period that Harbison-Walker would need Halliburton's financial assistance to pay its own asbestos claims. USCA5 4575. Absent an admission by Halliburton, the only way to "prove" that the June 28, 2001 corrective disclosure "shows the misleading or deceptive nature" of Halliburton's prior announcements would be to establish *through merits discovery* that

Halliburton knew but failed to disclose prior to June 28, 2001 that it would ultimately bear financial responsibility for claims against Harbison-Walker.

Similarly, Halliburton claimed that the adverse asbestos verdict disclosed on December 7, 2001, which caused its stock to tumble 42.7%, was an unexpected development, and so cannot constitute a corrective disclosure. The EPJ Fund alleged, and is entitled to merits discovery to prove, that Halliburton knew its asbestos liability was a "ticking 'time bomb[],'" *id.* at 4567, and that given Halliburton's aggressive litigation tactics, the soaring number of asbestos claims against it (including the 165,000 Harbison-Walker claims), and its unwillingness to settle claims except for a minimal amount, Halliburton knew, or was grossly negligent in not knowing, that it was only a matter of time before it would get saddled with significant adverse jury verdicts and that its reserves were neither conservative nor adequate. In sum, the EPJ Fund is entitled to merits discovery to establish what Halliburton knew and when it knew it.

C. The Fifth Circuit's Rule Constitutes Impermissible Judicial Legislation That Impinges On A Plaintiff's Right To A Jury Trial And Unduly Limits Private Securities Actions

1. The Fifth Circuit Rule Was Motivated By Policy Concerns Regarding Class Certification

The Fifth Circuit has repeatedly expressed concern that class certification creates undue settlement pressure on defendants. It did so in *Oscar* where it spoke of the "lethal force of certifying a class of purchasers of securities enabled by the fraud on the market doctrine" and said it could not "ignore the *in terrorem* power of certification." *Oscar*, 487 F.3d at 262, 267.

The Fifth Circuit, of course, does not provide empirical support for its implicit assumption that frivolous cases regularly survive motions to dismiss and are certified, thereby putting undue pressure on defendants to settle. And it ignores altogether the important role class actions play in enabling plaintiffs with claims too small to warrant pursuing individually to combine their claims and seek judicial redress. *See Deposit Guar. Nat'l Bank, Jackson, Miss. v. Roper*, 445 U.S. 326, 339 (1980) ("Where it is not economically feasible to obtain relief within the traditional framework of a multiplicity of small individual suits for damages,

aggrieved persons may be without any effective redress unless they may employ the class-action device.").

The concerns expressed by the Fifth Circuit, even if they were justified and not balanced by countervailing concerns, do not permit the Fifth Circuit to import a premature merits inquiry into Rule 23. As the Seventh Circuit stated:

> Rule 23 allows certification of classes that are fated to lose as well as classes that are sure to win. To the extent it holds that class certification is proper only after the representative plaintiffs establish by a preponderance of the evidence everything necessary to prevail, *Oscar Private Equity* contradicts the decision, made in 1966, to separate class certification from the decision on the merits.

Schleicher, 618 F.3d at 686.

The Federal Rules of Civil Procedure, including Rule 23, are binding on all federal courts. It is "of overriding importance" that "courts must be mindful that the Rule [23] as now composed sets the requirements they are bound to enforce." *Amchem Prods., Inc. v. Windsor*, 521 U.S. 591, 620 (1997); *see also Ortiz v. Fibreboard Corp.*, 527 U.S. 815, 861 (1999) ("[W]e are bound to follow Rule 23 as we

understood it upon its adoption, and . . . we are not free to alter it except through the process prescribed by Congress in the Rules Enabling Act.").

This Court has specifically admonished the lower courts not to be swayed by their perceived policy preferences in construing the Federal Rules of Civil Procedure. *See, e.g., Jones v. Bock*, 549 U.S. 199, 212 (2007) ("[C]ourts should generally not depart from the usual practice under the Federal Rules on the basis of perceived policy concerns."). In *Leatherman v. Tarrant County Narcotics Intelligence & Coordination Unit*, 507 U.S. 163 (1993), the Court unanimously reversed the Fifth Circuit for imposing a heightened pleading standard in § 1983 suits against municipalities, even though "if [the] Rules . . . were rewritten today, claims against municipalities under § 1983 might be subjected to the added specificity requirement. . . . But that is a result which must be obtained by the process of amending the Federal Rules, and not by judicial interpretation." 507 U.S. at 168. The Court similarly struck down courts of appeals in *Swierkiewicz v. Sorema N.A.*, 534 U.S. 506, 515 (2002), and *Hill v. McDonough*, 547 U.S. 573 (2006), for imposing heightened pleading requirements not authorized under Rule 23 in certain categories of cases.

Here, the Fifth Circuit has effectively amended Rule 23 by imposing a new prerequisite for class certification, usurping the role of this Court

and Congress. *See Amchem*, 521 U.S. at 620 ("Courts are not free to amend a rule outside the process Congress ordered . . . ."); *Bus. Guides, Inc. v. Chromatic Commc'ns Enters., Inc.*, 498 U.S. 533, 552 (1991).

2. Recalibrating The Require-ments For A Securities Class Action Is the Role Of Congress, Not The Courts

Any policy determination to further "tighten" the requirements for bringing security class actions lies with Congress—which could have altered the requirements established in *Basic* for invoking the fraud-on-the-market presumption at any point over the last two decades and which can always modify the requirements for bringing a federal securities action—or with this Court and Congress, which collectively can amend Rule 23. Congress has repeatedly acted to readjust the balance between plaintiffs' right to pursue meritorious claims and defendants' right to be protected against vexatious litigation. Most recently, Congress addressed concerns regarding securities class actions by enacting the PSLRA, Pub. L. 104-67, 109 Stat. 737 (codified as amended in scattered sections of 15 U.S.C.), and the Securities Litigation Uniform Standards Act of 1998 ("SLUSA"), Pub. L. 105-353, 112 Stat. 3227 (codified as amended in scattered sections of 15 U.S.C.). *See Schleicher*, 618 F.3d at 686 ("[T]he means that Congress chose to deal with

settlement pressure were to require more at the pleading stage and to ensure that litigation occurs in federal court under these special standards, rather than state court under looser ones."). The PSLRA protects defendants in securities class actions by imposing heightened pleading requirements, 15 U.S.C. § 78u-4(b); deferring discovery until after motions to dismiss are resolved, *id.* § 78u-4(b)(3)(B); and replacing joint and several liability with proportionate liability, *id.* § 78u-4(f)(2)(B)(i), among other measures. *See also Tellabs, Inc. v. Makor Issues & Rights, Ltd.*, 551 U.S. 308, 313 (2007) (discussing heightened pleadings requirements imposed by the PSLRA). SLUSA addressed concerns that plaintiffs' counsel were circumventing the PSLRA by filing claims in state court. That Act curbs forum selection and promotes national standards for securities traded on national exchanges by preempting certain state law actions for fraud, negligence, or breach of fiduciary duty and by making all "covered class actions" removable to federal court. *See* 112 Stat. 3227; *see also Merrill Lynch, Pierce, Fenner & Smith Inc. v. Dabit*, 547 U.S. 71, 81-82 (2006).

Any further measure to modify the requirements for securities fraud class actions requires participation by Congress. As the Seventh Circuit recognized, "[w]e do not think it appropriate for the judiciary to make its own further adjustments by reinterpreting Rule 23 to make likely success on the merits essential to class

certification in securities-fraud suits." *Schleicher*, 618 F.3d at 686.

3. The Fifth Circuit's Rule Deprives Plaintiffs Of The Right To A Jury Trial And Requires Plaintiffs To Meet A Higher Standard Of Proof At Class Certification Than At Summary Judgment

The Fifth Circuit's rule improperly infringes on a plaintiff's Seventh Amendment right to a jury trial because it requires a court to make a merits ruling on an element of plaintiff's claim under a preponderance-of-the-evidence standard even though the court does not need to make such a ruling in performance of its gatekeeping role under Rule 23. While a court must determine if common issues predominate in its role as a gatekeeper to class certification, it does not need to determine whether plaintiff can establish loss causation. In requiring plaintiff to do so by a preponderance of the evidence, the Fifth Circuit has violated plaintiff's Seventh Amendment right to a jury trial by imposing a higher standard of proof for an element of the claim at class certification than at summary judgment under FED. R. CIV. P. 56. *See* U.S. Invitation Br. at 13 ("[T]he Fifth Circuit's approach improperly requires district courts to usurp the role of juries in resolving disputed issues of loss-causation.").

Plaintiffs are entitled to a jury trial on security fraud claims if they make a sufficient initial showing. *See Tellabs,* 551 U.S. at 326-28; *see also In re U. S. Fin. Sec. Litig.*, 609 F.2d 411, 432 (9th Cir. 1979); *Dasho v. Susquehanna Corp.*, 461 F.2d 11, 21 (7th Cir. 1972); *Rachal v. Hill,* 435 F.2d 59, 64-65 (5th Cir. 1970).

Summary judgment under Rule 56 is only warranted "if the movant shows that there is no genuine dispute as to any material fact and the movant is entitled to judgment as a matter of law." FED. R. CIV. P. 56(a); *see Celotex Corp. v. Catrett,* 477 U.S. 317, 322 (1986) (summary judgment is appropriate " against a party who fails to make a showing sufficient to establish the existence of an element essential to that party's case, and on which that party will bear the burden of proof at trial."). "Summary judgment . . . is inappropriate when the evidence is susceptible of different interpretations or inferences by the trier of fact." *Hunt v. Cromartie,* 526 U.S. 541, 553 (1999). The Fifth Circuit requires plaintiffs to clear a far more onerous standard at class certification than applies at summary judgment, thereby violating plaintiffs' Seventh Amendment right to a jury trial on disputed issues of loss causation.

In *Alaska Elec. Pension Fund v. Flowserve Corp.*, the Fifth Circuit opined that it was not depriving plaintiff of its right to a jury trial because "the court's determination on class certification may

be revised (or wholly rejected) by the ultimate fact finder" and because even if the class is not certified, the plaintiff could always pursue his or her own claim. 572 F.3d 221, 229 (5th Cir. 2009). However, in many, if not most, securities actions—as the parties recognized was the case here, *compare* Pet. App. 77a-78a *with* Pet. App. 93a, 106a—an adverse ruling on class certification would likely be a death knell for the case, because pursuing the case on behalf of an individual plaintiff would be prohibitively expensive.

4. The Fifth Circuit's Rule Would Unduly Restrict Private Securities Actions And Preclude Meritorious Actions

Private securities actions play a central role in enforcement of the securities laws and deterring wrongdoing, as Congress has recognized: "[Private securities litigation] promotes public and global confidence in our capital markets and helps to deter wrongdoing and to guarantee that corporate officers, auditors, directors, lawyers and others properly perform their jobs." Joint Explanatory Statement of the Committee of Conference on H.R. 1058 (Joint Explanatory Statement) at 31, reprinted in 2 U.S.C.C.A.N. 730 (104th Cong., 1st Sess. 1995). This Court has also noted on numerous occasions the key role played by private securities actions. *See, e.g., Tellabs*, 551 U.S. at 313 ("This Court has long recognized that meritorious private actions to

enforce federal antifraud securities laws are an essential supplement to criminal prosecutions and civil enforcement actions brought, respectively, by the Department of Justice and the Securities and Exchange Commission (SEC)."); *Dura*, 544 U.S. at 345 ("The securities statutes seek to maintain public confidence in the marketplace. They do so by deterring fraud, in part, through the availability of private securities fraud actions."); *Basic*, 485 U.S. at 231 ("[A] private cause of action . . . for a violation of § 10(b) and Rule 10b-5 . . . constitutes an essential tool for enforcement of the 1934 Act's requirements.").

The Securities and Exchange Commission and Solicitor General recognize the importance of private securities litigation as well. *See, e.g.*, Brief of the United States as Amicus Curiae Supporting Respondents at 1, *Merck & Co., Inc. v. Reynolds*, 130 S. Ct. 1784 (2010) (No. 08-905) ("Meritorious private securities-fraud actions are an essential supplement to criminal prosecutions and civil enforcement actions brought by the United States and the Securities and Exchange Commission (SEC)."). Private securities actions are essential because they supplement SEC actions and potentially provide injured shareholders with compensation that they would otherwise not receive. James D. Cox & Randall S. Thomas, *SEC Enforcement Heuristics: An Empirical Inquiry*, 53 DUKE L.J. 737, 779 (2003). In fact, 85% of settled private cases do not have a parallel SEC action. *Id.* at 777.

The SEC has stressed the importance of the fraud-on-the-market presumption, in particular, to the proper enforcement of the securities laws by private litigants:

> While the Commission is not required to show reliance in its own enforcement actions, the Commission believes that the proper interpretation and application of the fraud-on-the-market presumption is important to the effective enforcement of the federal securities laws. It is well recognized that private securities actions "provide 'a most effective weapon in the enforcement' of the securities laws and are 'a necessary supplement to Commission action.'"

Brief of the Securities and Exchange Commission as Amicus Curiae at 3, *In re WorldCom, Inc. Sec. Litig.*, No. 03-9350 (2d Cir. Apr. 19, 2004) (quoting *Bateman Eichler, Hill Richards, Inc. v. Berner*, 472 U.S. 299, 310 (1985)).

The Fifth Circuit's rule undercuts private enforcement of federal securities laws by nullifying the fraud-on-the-market presumption and imposing an "exceedingly high burden on security plaintiffs at an early stage of the litigation." Pet. App. 7a. The Fifth Circuit's rule also largely immunizes

defendants who release culpable negative news on the same day as significant non-culpable negative news and even incents them to do so because of the difficulty of disaggregating the effects of negative culpable and non-culpable news. "An unfortunate consequence of the Fifth Circuit approach is that it encourages strategic decisions to time corrective disclosure to coincide with other negative news likely to affect the company's stock." THOMAS LEE HAZEN, TREATISE ON THE LAW OF SECURITIES REGULATION § 12.10[5] (6th ed. 2009). In short, the Fifth Circuit's rule threatens the viability of many meritorious private securities actions. As Judge Easterbrook explained in *Schleicher*: "The particular step that the fifth circuit took in *Oscar* . . . would make certification impossible in many securities suits, because when true and false statements are made together it is often impossible to disentangle the effects with any confidence." 618 F.3d at 686.

It is not only plaintiffs in private securities actions who stand to lose. The ensuing risk to the financial markets, which depend on private enforcement actions as well as SEC actions to deter fraud, is substantial, as the recent financial crisis illustrates. *See Merrill Lynch, Pierce, Fenner & Smith, Inc*, 547 U.S. at 78 ("The magnitude of the federal interest in protecting the integrity and efficient operation of the market for nationally traded securities cannot be overstated.").

CONCLUSION

For the foregoing reasons, the ruling of the Fifth Circuit should be reversed and this case remanded with directions that the proposed class be certified because the only reason the district court declined to do so, and the only reason the court of appeals affirmed that decision, was the EPJ Funds' failure to prove loss causation at class certification.

QUESTION PRESENTED

Whether the court of appeals correctly affirmed the district court's denial of class certification where the evidence showed that the alleged misrepresentations had no impact on the company's stock price.

CORPORATE DISCLOSURE STATEMENT

Pursuant to this Court's Rule 29.6, Respondent Halliburton Company states that it is a publicly held company, which has no parent company.

IN THE

Supreme Court of the United States

No. 09-1403

ERICA P. JOHN FUND, INC., FKA ARCHDIOCESE OF MILWAUKEE SUPPORTING FUND, INC.,

Petitioner,

v.

HALLIBURTON CO. ET AL.,

Respondents.

On Writ of Certiorari
to the United States Court of Appeals
for the Fifth Circuit

BRIEF FOR RESPONDENTS

STATEMENT

In *Basic Inc.* v. *Levinson*, 485 U.S. 224 (1988), a four-Justice majority of this Court created a rebuttable presumption that securities purchasers rely "on the integrity of the market price," which, in turn, is presumed to incorporate all public, material misrepresentations. *Id.* at 247. That presumption enables a Rule 10b-5 plaintiff to submit proof of an efficient market in lieu of proof that individual plaintiffs relied on defendant's misrepresentations. The defendant, however, may "rebut the presumption of reliance" by "show[ing] that the misrepresentation

in fact did not lead to a distortion of price." *Id.* at 248. Where the rebuttal is successful, "the causal connection" between the misrepresentation and the plaintiff's reliance is "broken" because "the basis for finding that the fraud had been transmitted through market price"—and thus that class members all relied on a distorted market price—is "gone." *Ibid.*

This case presents a fundamental question regarding *Basic*'s rebuttable presumption: Must a class be certified where the evidence shows that the alleged misrepresentation did *not* distort the market price? The answer must be "no." The predicate for presuming classwide reliance vanishes when the market price on which class members presumptively relied was not affected by the challenged statement. Instead, any reliance would have to be proved on an individualized, plaintiff-by-plaintiff basis, making class certification inappropriate.

The contrary view of petitioner Erica P. John Fund, Inc. (the Fund) and its *amici* defies common sense, judicial efficiency, and *Basic* itself. It would deploy the *in terrorem* effect of class certification under the fraud-on-the-market theory even where the alleged misrepresentation did not affect the market price. And it would needlessly postpone rebuttal of the presumption, requiring courts to retroactively decertify classes that never should have been certified in the first place.

The Fund's claim that courts must defer ruling on the viability of the presumption of reliance until after the class is certified misconceives the "commonality" and "predominance" showings that must be made to justify class certification under Rule 23. For class certification to be proper, the judge must find that issues subject to common proof predominate. Thus, class certification may be appropriate if the fraud-on-the-market presumption can be used to establish classwide reliance on a distorted market price. But if the market price was not dis-

torted by the fraud, and the class could not have universally relied on that distorted price, then the issue of reliance cannot be resolved on a classwide basis. The failure of the fraud-on-the-market presumption in this context does not disprove the merits of any fraud claim. It instead shows that the reliance issue will require the sort of individualized inquiry inappropriate for resolution in a class action. This Court should reject the Fund's invitation to render *Basic*'s rebuttable presumption virtually irrebuttable at the certification stage.

I. BACKGROUND

1. This Court has "implied * * * a private damages action" for securities fraud from Section 10(b) of the Securities Exchange Act, 15 U.S.C. § 78j(b), and the SEC's Rule 10b-5, 17 C.F.R. 240.10b-5. *Dura Pharms., Inc.* v. *Broudo*, 544 U.S. 336, 341 (2005).

Like other claimants, a named plaintiff seeking class certification in a federal securities-fraud suit must satisfy Rule 23's requirements. *Amchem Prods., Inc.* v. *Windsor*, 521 U.S. 591, 613-614 (1997); *Gen. Tel. Co. of the Sw.* v. *Falcon*, 457 U.S. 147, 156 (1982).

Here, the Fund sought certification under Rule 23(b)(3), which requires a plaintiff to prove that "the questions of law or fact common to class members predominate over any questions affecting only individual members." J.A. 146a-148a; see Fed. R. Civ. P. 23(b). It appears undisputed (see Pet. Br. 46; U.S. Br. 9-10 & n.1) that the Fund must establish predominance, as well as the other Rule 23 requirements, by a preponderance of the evidence. See *In re Hydrogen Peroxide Antitrust Litig.*, 552 F.3d 305, 320 (3d Cir. 2008); *Teamsters Local 445* v. *Bombardier Inc.*, 546 F.3d 196, 202 (2d Cir. 2008); *Oscar Private Equity Invs.* v. *Allegiance Telecom, Inc.*, 487 F.3d 261, 267-269 (5th Cir. 2007).

2. The traditional rule in fraud lawsuits was that the element of reliance required individualized proof: Each plaintiff had to show that he relied on the misrepresentations, *i.e.*, that absent the misrepresentations, he would not have entered into the transaction. *Gariety* v. *Grant Thornton, LLP*, 368 F.3d 356, 367 (4th Cir. 2004); see *Stoneridge Inv. Partners, LLC* v. *Scientific-Atlanta, Inc.*, 552 U.S. 148, 159, 160 (2008). As this Court recognized in *Basic*, "[r]equiring proof of individualized reliance * * * effectively * * * prevented [plaintiffs] from proceeding with a class action, since individual issues * * * overwhelmed the common ones." 485 U.S. at 242.

To remedy that perceived difficulty, *Basic*'s four-Justice majority ruled that a putative class-action plaintiff may obtain a rebuttable presumption of classwide reliance by invoking the "fraud-on-the-market" theory. 485 U.S. at 245.[1] The fraud-on-the-market theory assumes that in an efficient, well-developed market, all public information about a company is known to the market and reflected in the company's stock price. *Id.* at 246. The theory further posits that "[a]n investor who buys or sells stock at the price set by the market does so in reliance on the integrity of [the market] price." *Id.* at 247. Because misrepresentations presumably distort the market price, "an investor's reliance on any public, material misrepresentations * * * may be presumed for purposes of a Rule 10b-5 action." *Ibid.*; see *Stoneridge*, 552 U.S. at 159.

To trigger the fraud-on-the-market presumption of reliance, the plaintiff must show that (1) the defendant "made public, material misrepresentations"; (2) the de-

---

[1] Chief Justice Rehnquist and Justices Scalia and Kennedy did not participate. *Basic*, 485 U.S. at 250. Justice Blackmun wrote the majority opinion joined by Justices Brennan, Marshall, and Stevens. *Id.* at 226. Justices White and O'Connor dissented in relevant part. *Id.* at 250-263.

fendant's shares were traded in an "efficient market"; and (3) "the plaintiff traded shares between the time the misrepresentations were made and the time the truth was revealed." *Basic*, 485 U.S. at 248 & n.27. This showing establishes the "threshold facts" for a presumption that the entire class relied on the misrepresentation by relying on the market price. *Id.* at 248.

The presumption of reliance, however, is "subject to rebuttal." *Basic*, 485 U.S. at 245. Indeed, "*[a]ny showing* that severs the link between the alleged misrepresentation and either the price received (or paid) by the plaintiff, or his decision to trade at a fair market price, will be sufficient to rebut the presumption of reliance." *Id.* at 248 (emphasis added). Thus, a defendant may "rebut the presumption of reliance" by "show[ing] that the misrepresentation in fact did not lead to a distortion of price." *Ibid.* Such a rebuttal breaks the "causal connection" because "the basis for finding that the fraud had been transmitted through the market price would be gone." *Ibid.*

3. Although some proponents of the efficient-market hypothesis believed that its adoption would curtail the number of securities-fraud class actions, Fischel, *Use of Modern Finance Theory in Securities Fraud Cases Involving Actively Traded Securities*, 38 Bus. Law. 1, 16 (1982), they were proven wrong. Between 1988 and 1991, the number of such suits nearly tripled, see O'Brien, *The Class-Action Shakedown Racket*, Wall St. J., Sept. 10, 1991, at A20, and notwithstanding the enactment of the PSLRA, the number increased still further over the ensuing decades. Plancich & Starykh, *2008 Trends in Securities Class Actions* (Nat. Econ. Res. Assoc.), Dec. 2008, at 2.

II. Proceedings Below

A. Proceedings In District Court

The Fund filed this putative securities-fraud class action against Respondents Halliburton Company and its CEO David Lesar (collectively, Halliburton) in the U.S. District Court for the Northern District of Texas on June 3, 2002. J.A. 9a; Pet. App. 111a-112a. The complaint alleged that Halliburton made misrepresentations about three divergent topics: (1) potential liability in asbestos litigation; (2) accounting for revenue on fixed-price construction contracts; and (3) benefits from a merger with Dresser Industries. Pet. App. 112a-113a. The Fund claimed that investors lost money when Halliburton's stock price declined following the release of negative news touching upon one or more of the subjects of the alleged misstatements.

Five years after the Fund filed its complaint, it moved for class certification. J.A. 97a, 126a. During those five years, the Fund amended its complaint four times and obtained extensive discovery, including more than 600,000 pages of documents from Halliburton.

In support of certification, the Fund relied exclusively on an event study and a report from its expert, Jane Nettesheim. The Fund's motion recognized that "[t]he cause and effect relationship between unexpected information released to the market and movement of the stock price *is the essence* of an efficient market and the foundation for the fraud-on-the-market theory." J.A. 151a (emphasis added). The accompanying event study, which examined every day in the 2½ year class period, was the Fund's sole proof of both market efficiency and the alleged misrepresentations' impact on market price. J.A. 166a-167a, 271a, 590a-592a; S.A. 97-453. Although the Fund alleged that Halliburton made dozens of misrepresentations during the class period, J.A. 516a-525a, the

Fund's event study revealed that the stock price did not react to any of them. J.A. 349a, 391a-394a, 526a, 664a, 721a.

In light of that, the Fund argued that it could prove the alleged misrepresentations' impact on market price instead by showing that the stock price *dropped* following the release of various items of negative information. In response, Halliburton submitted an expert report and documentary evidence demonstrating that its stock price declines were caused by the release of unrelated negative news and a variety of other causes, not by "corrective" disclosures that revealed the falsity of any prior misrepresentation. J.A. 469a-537a, 691a-721a.

The Fund never requested additional discovery in connection with its motion for class certification. Nor did it claim that inadequate discovery somehow hampered its ability to show that the misrepresentation affected the market price. To the contrary, the Fund argued that it had "satisfied [that] burden through the submission of the Nettesheim expert report." J.A. 155a. And it emphasized that "[i]n preparation of the Report, Nettesheim reviewed all publicly available, relevant information for the Class Period." *Ibid.*

The district court denied the Fund's request for class certification. Pet. App. 3a-54a. The court explained that, under the Fifth Circuit's decision in *Oscar*, plaintiffs invoking *Basic*'s presumption of reliance must show that the false statements affected the value of the stock. *Id.* at 6a. The court noted that the Fund did not even claim that Halliburton's alleged misrepresentations moved the stock price when they were made. *Id.* at 7a & n.11, 11a. And the court concluded that the Fund had not shown the required effect on market price through later price declines. The price declines upon which the Fund relied did not follow disclosures that revealed the falsity of any previous misrepresentation. *Id.* at 14a-54a. Instead, the

Fund simply "offer[ed] evidence of a decrease in price following the release of negative information" that would not support an inference that the earlier misrepresentation affected the market price. *Id.* at 51a.

B. The Court Of Appeals' Decision

The court of appeals affirmed. Pet. App. 111a-136a. The court began by explaining that its precedent requires the misrepresentation's effect on market price to be assessed at the class-certification stage. Pet. App. 115a; see *Oscar*, 487 F.3d at 264 ("without [the fraud-on-the-market] presumption, questions of individual reliance would predominate, and the proposed class would fail"). Thus, a plaintiff invoking the fraud-on-the-market presumption to obtain class certification must prove that the misstatement "actually moved the market." Pet. App. 115a. In *Oscar*, the court of appeals had drawn that requirement from *Basic*'s holding that "the presumption of reliance may be rebutted by '[a]ny showing that severs the link between the alleged misrepresentation and * * * the price received (or paid) by the plaintiff.'" 487 F.3d at 265 (quoting *Basic*, 485 U.S. at 248). For instance, the link could be severed by "publicly available information that the misrepresentation didn't move the stock price." *Ibid.* *Oscar* observed that, "[a]s a matter of practice, the oft-chosen defensive move is to make '*any* showing that severs the link' between the misrepresentation and the plaintiff's loss; to do so rebuts on arrival the plaintiff's fraud-on-the-market theory." *Ibid.*

Thus, a touchstone for applying the fraud-on-the-market presumption is whether the alleged misrepresentation "actually inflated the company's stock price." Pet. App. 116a. That can be proved in at least two ways. It "may be proved *either* by an increase in stock price immediately following the release of positive information, *or* by showing negative movement in the stock price after release of the alleged 'truth' of the earlier falsehood."

Ibid. (emphasis added). The court noted that, in this case, the Fund did not attempt to prove that the stock price moved in response to Halliburton's alleged misrepresentations (indeed, its evidence showed the opposite). *Ibid.* Rather, the Fund "relie[d] only on stock price decreases following allegedly corrective disclosures by Halliburton." *Ibid.*

To demonstrate a misrepresentation's price impact via alleged corrective disclosures, the court of appeals explained, a plaintiff must do more than simply allege a misrepresentation and show a price decline following a subsequent disclosure of negative information. Pet. App. 116a. Instead, a plaintiff must prove that the negative stock-price movement "resulted directly *because* of the correction to a prior misleading statement." *Id.* at 117a. Without such proof, "there would be no inference raised that the original, allegedly false statement caused an inflation in the price to begin with." *Ibid.* Quoting *Oscar*, the court of appeals explained that this showing must be made "at the class certification stage by a preponderance of all admissible evidence." *Id.* at 115a.[2]

Thus, plaintiffs must show that "a loss occurred from the decline in stock price because the truth made its way into the marketplace, rather than for some other reason, such as a result of changed economic circumstances, changed investor expectations, new industry-specific or firm-specific facts, conditions, or other factors independent of the fraud." Pet. App. 117a (punctuation omitted).

---

[2] *Oscar* repeatedly emphasized that it was addressing a situation where the plaintiff attempted to prove the misrepresentation's price impact through price declines following allegedly corrective disclosures. 487 F.3d at 262, 265 n.22, 267. In that context, *Oscar* often used the term "loss causation" as a shorthand for the showing the plaintiff must make. *E.g.*, *id.* at 265 ("in cases like this," the court "[e]ssentially" requires proof of loss causation).

Similarly, "if a company releases multiple items of negative information on the same day, the plaintiff must establish a reasonable likelihood that a subsequent decline in stock price is due to the revelation of the truth of the earlier misstatement rather than to the release of the unrelated negative information." *Id.* at 117a-118a.[3] And a plaintiff may not rely on the release of "confirmatory information"—information that repeats facts already known to the market and thus already reflected in the stock price. *Id.* at 119a. In sum, "a subsequent disclosure that does not correct and reveal the truth of the previously misleading statement" is not a sufficient basis for certifying a class under the fraud-on-the-market presumption. *Id.* at 118a (citing *Alaska Elec. Pension Fund* v. *Flowserve Corp.*, 572 F.3d 221, 230 (5th Cir. 2009) (*per curiam*; panel including O'Connor, J.)).

Turning to the facts here, the court held that the Fund failed to show that any of Halliburton's alleged misrepresentations had distorted the market price on which investors presumptively relied. Pet. App. 123a-136a. As noted, the Fund's own analysis showed that Halliburton's stock price never increased following any of the alleged misrepresentations. *Id.* at 116a. And the court concluded that the evidence failed to show that any disclosure followed by a stock-price decline was "corrective"—that it revealed the falsity of any of Halliburton's alleged misrepresentations. *Id.* at 123a. It was "not enough merely to show that the market declined after a statement reporting negative news." *Id.* at 116a. Rather, the evidence had to show that the decline in price following a

---

[3] The Fifth Circuit does not require evidence that all of the price decline was attributable to the corrective disclosure, only that it was "more probable than not that it was this [corrective disclosure], and not other unrelated negative statements, that caused a significant amount of the decline." *Oscar*, 487 F.3d at 266.

disclosure "raise[d] an inference that the price was actually affected by earlier alleged misrepresentations." *Id.* at 117a.

In this case, a straightforward comparison between the alleged misrepresentations and the claimed "corrective" disclosures provided no basis for inferring that any alleged misrepresentation moved the market in the first place.[4] Pet. App. 123a-136a. Consequently, there was no basis on which to presume that the Fund (and the putative class) relied on the misrepresentations by relying on the market price. *Id.* at 112a. Because there was no basis for assuming the putative class had relied on a distorted market price, reliance would have to be proved plaintiff-by-plaintiff, precluding certification. See *id.* at 136a.

SUMMARY OF ARGUMENT

A class may not be certified under the fraud-on-the-market presumption of reliance where the evidence shows that no alleged misrepresentation affected the market price.

I. In *Basic Inc.* v. *Levinson*, 485 U.S. 224 (1988), this Court created a presumption of reliance that allowed plaintiffs to overcome the difficulty of proving individualized reliance on misrepresentations. That presumption rests on the premise that investors rely on the integrity of market prices, which incorporate all public information, including any material misrepresentations.

---

[4] For instance, both courts below held that certain alleged misrepresentations about the benefits of the Dresser merger merely confirmed statements made before the class period, and thus could not have inflated market price. Pet. App. 45a, 47a-48a, 53a, 134a n.50. The court of appeals further concluded that the later disclosures were not in fact corrective of any previous alleged misstatements. *Id.* at 129a-132a. The Fund does not even mention this category of alleged misrepresentations in the argument section of its brief.

The *Basic* presumption of reliance, however, is rebuttable. Defendants rebut the presumption by proffering evidence that an alleged misrepresentation did not inflate the market price that plaintiffs paid. That makes sense. Such a showing refutes the foundational premise of the reliance presumption—that, when relying on the market price, plaintiffs were effectively relying on defendants' alleged misrepresentations.

A plaintiff bears the ultimate burden under Rule 23 to show that common issues predominate over individual ones. If a plaintiff cannot sustain the presumption of reliance or otherwise show that common issues predominate, then that plaintiff has failed to satisfy Rule 23 and a class may not be certified. The Fund has not met its burden here.

II. Whether a misrepresentation distorted the market price is thus directly relevant to whether a plaintiff can show that common issues predominate. As a result, that inquiry must be considered at the class-certification stage. That is true even if the misrepresentation's impact on the market price may overlap with "merits" issues. As all parties recognize, courts must ensure that Rule 23's requirements are met, including when the certification and merits inquiries coincide.

The Fund and its *amici* urge that classes must be certified under the presumption of reliance even when defendants' alleged misrepresentations did not distort market prices. And they insist that defendants may not rebut the presumption of reliance until after class certification. That would contradict the logic of *Basic*, waste judicial resources, and impose *in terrorem* settlement pressure on defendants even in meritless cases. *Basic* allows plaintiffs to establish classwide reliance through a rebuttable presumption that all investors relied on misrepresentations by relying on market prices. But if a market price does not reflect the alleged misrepresenta-

tions, the presumption that *all* plaintiffs relied on the misrepresentations through the market price is destroyed and individual questions predominate.

There is no logical reason why defendants should be prohibited from rebutting plaintiffs' attempts to satisfy Rule 23's requirements at the class-certification stage. No one disputes that the *other* prerequisites to the presumption of reliance (*e.g.*, an efficient market) may be rebutted at the class-certification stage. There is no reason to treat price-impact rebuttal differently. Moreover, postponing defendants' ability to rebut the presumption of reliance would result in countless classes being certified with the certain knowledge that they would have to be decertified later, once the evidence inevitably reveals that the alleged misrepresentations did not in fact affect the relevant market price.

III. Under these principles, the court of appeals' decision should be affirmed. The evidence showed that Halliburton's alleged misrepresentations did not inflate the market price of Halliburton's stock and that none of the later stock-price declines were attributable to corrective disclosures that revealed the truth of any alleged misrepresentation. As a result, the Fund cannot use the presumption of reliance to satisfy Rule 23(b)(3)'s predominance requirement, and class certification was properly denied.

ARGUMENT

Traditionally, the element of "reliance" in fraud cases required individual proof that the plaintiff would not have entered into the transaction absent the misrepresentation. As a result, the reliance element tended to preclude plaintiffs from satisfying Rule 23's commonality and predominance requirements. The fraud-on-the-market theory endorsed in *Basic*, however, recognized an alternative means of proving reliance. Under *Basic*, if a plaintiff

proves certain threshold facts, courts may rebuttably presume that (a) the market efficiently incorporates all information into stock prices, including false statements; and that (b) plaintiffs rely on those market prices when making purchasing decisions. Thus, where an allegedly false statement inflates a stock's market price, courts may rebuttably presume that all class members relied on that market price when making their purchases.

The question in this case is whether plaintiffs may obtain class certification by insisting that reliance is a classwide rather than individualized issue even though *Basic*'s essential premise—that the alleged false statements altered the market price—has been rebutted. The answer must be "no." Plaintiffs cannot claim that all class members relied on the alleged misrepresentations by relying on the market price where the alleged misrepresentations did not affect the market price. And if plaintiffs cannot make out a case for classwide proof of reliance under *Basic*, reliance remains an individualized issue. To hold otherwise would wrongly relieve plaintiffs of their burden to satisfy Rule 23 and needlessly impose the *in terrorem* effect of class certification in cases unsuited to classwide treatment. Postponing rebuttal of the presumption would undermine judicial efficiency, requiring courts to labor over class actions that never should have been certified in the first place.

I. A Plaintiff Cannot Sustain The Presumption Of Reliance Where The Alleged Misrepresentation Did Not Distort The Market Price

A. *Basic* Creates A *Rebuttable* Presumption That Investors Rely On Misrepresentations Where They Are Reflected In The Market Price

1. The fraud-on-the-market presumption is founded on the premise that an efficient market reflects all "public material misrepresentations" and that "[a]n investor

who buys or sells stock at the price set by the market does so in reliance on the integrity of that price." *Basic Inc.* v. *Levinson*, 485 U.S. 224, 247 (1988). By creating a classwide presumption of reliance on the market price, *Basic* allows certification where the need for individualized proof of reliance would otherwise preclude it. *Id.* at 242. But *Basic* is not condition-free. It requires assurances that the market price was actually affected by the alleged misrepresentations. *Id.* at 248. The entire class cannot claim to have relied on the misrepresentation by relying on the market price if "the market price [was] not * * * affected by [the] misrepresentation." *Ibid.* Without such evidence, "the causal connection" between the misrepresentation and the plaintiff's reliance "[w]ould be broken" because "the basis for finding that the fraud had been transmitted through market price would be gone." *Ibid.*

To trigger the fraud-on-the-market presumption of reliance, the plaintiff must "plead and prove" certain "threshold facts": that (1) the defendant "made public, material misrepresentations"; (2) the defendant's shares were traded in an "efficient market"; and (3) "the plaintiff traded shares between the time the misrepresentations were made and the time the truth was revealed." *Basic*, 485 U.S. at 248 & n.27. A plaintiff who makes that showing is entitled to a "*nonconclusiv[e]* presum[ption] that the price of a publicly traded share reflects a material misrepresentation and that plaintiffs have relied upon that misrepresentation." *Dura Pharms., Inc.* v. *Broudo*, 544 U.S. 336, 341-342 (2005) (emphasis added).

That presumption of reliance remains "subject to rebuttal." *Basic*, 485 U.S. at 245. A defendant may rebut the presumption of reliance by, for example, "show[ing] that the misrepresentation in fact did not lead to a distor-

tion of price." *Id.* at 248; see Pet. Br. 45.[5] "*Any showing* that severs the link between the alleged misrepresentation and either the price received (or paid) by the plaintiff" will "rebut the presumption of reliance." *Basic*, 485 U.S. at 248 (emphasis added). Thus, where the record shows that "the market price [was] not * * * affected by [the] misrepresentations," the presumption is rebutted—the plaintiff class *cannot* have relied on misrepresentations by relying on a distorted market price where the market price was not affected. *Ibid.*

2. For those reasons, the Fifth and Second Circuits recognize that the presumption of reliance is unavailable—and class certification is inappropriate—where the record shows that the alleged misstatements did not affect market price. For example, in *Oscar*, the Fifth Circuit held that a plaintiff wishing to use the fraud-on-the-market presumption to obtain class certification must provide "proof that the misstatement *actually moved* the market." *Oscar Private Equity Invs.* v. *Allegiance Telecom, Inc.*, 487 F.3d 261, 265 (5th Cir. 2007). The court drew that requirement from *Basic*'s holding that "the presumption of reliance may be rebutted by '[a]ny showing that severs the link between the alleged misrepresentation and * * * the price received (or paid) by the plaintiff.'" *Ibid.* (quoting *Basic*, 485 U.S. at 248). That link is necessarily severed by, for example, "publicly available information that the misrepresentation didn't move the stock price." *Ibid.* The misrepresentation's effect on market price must be assessed at the class-certification stage, the court explained, for "without [the fraud-on-the-market] presumption, questions of individual reliance

---

[5] A defendant may also "rebu[t] proof of the elements giving rise to the presumption" or show "that an individual plaintiff traded or would have traded despite his knowing that the statement was false." *Basic*, 485 U.S. at 248.

would predominate, and the proposed class would fail." *Id.* at 264.

In *In re Salomon Analyst Metromedia Litigation*, 544 F.3d 474 (2d Cir. 2008), the Second Circuit agreed that a class may not be certified under the fraud-on-the-market presumption if the evidence shows that the alleged misrepresentations did not affect market price. The defendant, that court held, may rebut the presumption of reliance by "showing that there was no price impact" from the misrepresentation. *Id.* at 483; see also *ibid.* (defendant may rebut the presumption by "show[ing] that the misrepresentation in fact did not lead to a distortion of price"). Defendants, *Salomon* emphasized, are entitled to demonstrate the absence of impact on market price "prior to class certification." 544 F.3d at 484. "The *Basic* Court," the Second Circuit observed, "explained that successful rebuttal *defeats* certification by defeating the Rule 23(b)(3) predominance requirement." *Id.* at 485 (citing *Basic*, 485 U.S. at 249 n.29).[6]

3. The Fund (Br. 27, 33) assails the requirement that "the misstatement actually moved the market," *Oscar*, 487 F.3d at 265, as requiring plaintiffs to prove the merits of "loss causation" as a prerequisite to class certification. But that is incorrect. Indeed, the Fund concedes

---

[6] In opinions by then-Judge Alito, the Third Circuit has similarly held that *Basic*'s requirement of a "material" misrepresentation means that, to invoke the presumption of reliance, a plaintiff must establish a misrepresentation's price impact. *In re Burlington Coat Factory Sec. Litig.*, 114 F.3d 1410, 1425 (3d Cir. 1997); *Oran* v. *Stafford*, 226 F.3d 275, 282 (3d Cir. 2000). While those cases arose at the motion-to-dismiss stage, their rationale would preclude class certification under the fraud-on-the-market theory absent proof that the misrepresentation affected market price. Consequently, one scholar has remarked that the Third Circuit's approach to materiality is simply "*Oscar* in another guise." Langevoort, Basic *at Twenty: Rethinking Fraud on the Market*, 2009 Wisc. L. Rev. 151, 190 (2009).

(Br. 43, 45), that proof of price impact "will not itself constitute or proximately cause the relevant economic loss." *Dura*, 544 U.S. at 342.

The decision below makes that clear. The court of appeals observed that "the causal connection between an allegedly false statement and the price of the stock may be proved *either* by an increase in stock price immediately following the release of positive information," *i.e.*, by showing *price inflation* in response to falsity, "*or* by showing negative movement in the stock prices after release of the alleged 'truth' of the earlier falsehood," *i.e.*, price declines properly correlated to corrective disclosures. Pet. App. 116a (emphasis added). Thus, a plaintiff need only show that the misrepresentation affected market price in the first instance, not that the misrepresentation caused the later loss.

While *Oscar* sometimes used the shorthand "loss causation," it did so only in the context where—as here—a plaintiff *cannot* directly show that the misrepresentation initially moved the market price and therefore attempts to prove the misrepresentation's price impact by showing that the price declined following allegedly corrective disclosures. The evidence and analysis for determining whether later price declines raise an inference that the misrepresentation distorted market price necessarily overlap to some degree with that of loss causation. Cf. *Dura*, 544 U.S. at 343 (recognizing that a price decline "may reflect not the earlier misrepresentation," but a "tangle of [other] factors affecting price"). But the overlap is only partial: Unlike a plaintiff proving loss causation, a plaintiff proving price impact need not provide "quantification of damages" or show what "percentage of the drop was attributable to the corrective disclosure," but need only make "some empirically-based showing that the corrective disclosure was more than just present at the scene." *Oscar*, 487 F.3d at 271. Regardless of how

the plaintiff opts to proceed, the Fifth Circuit (like the Second Circuit) requires only that the misrepresentation affect market price for the presumption of reliance to be sustained.

Assessing whether the plaintiff proved price impact in this way does not improperly conflate reliance and loss causation. Pet. Br. 42-43, 46; U.S. Br. 7-8. *Basic* holds that a defendant may rebut the presumption by refuting the elements of the presumption (*e.g.*, market efficiency) or by making "*[a]ny* showing that severs the link between the alleged misrepresentation and *either* the price received (or paid) by the plaintiff, *or* his *decision to trade* at a fair market price." 485 U.S. at 248 (emphasis added). Thus, a demonstrated absence of *either* price impact *or* transaction causation rebuts the presumption of reliance. That makes sense, since if either is lacking there is no reason to presume that plaintiffs relied on misrepresentations via the market price.

B. Neither *Basic* Nor Rule 301 Relieve Plaintiffs Of The Ultimate Burden Of Showing That Rule 23's Requirements Have Been Met

Under *Basic*, the fraud-on-the-market theory of class-wide reliance is rebutted whenever a defendant makes "*[a]ny* showing that severs the link between the alleged misrepresentation and either the price received (or paid) by the plaintiff." 485 U.S. at 248 (emphasis added). When that occurs, plaintiffs must reforge the severed link to re-establish the presumption, or demonstrate that, despite the presumption's failure, all of Rule 23's requirements are nonetheless met.

1. In establishing the fraud-on-the-market presumption, *Basic* invoked Federal Rule of Evidence 301. See 485 U.S. at 245. Under Rule 301, an initial burden of production may shift to the defendant, but the presumption "does *not* shift * * * the burden of proof in the sense

of the risk of nonpersuasion, which remains throughout the trial upon the party on whom it was originally cast." Fed. R. Evid. 301 (emphasis added). In other words, despite the fraud-on-the-market presumption, plaintiffs always retain the ultimate burden of proof. Thus, for purposes of class certification, the successful rebuttal of the presumption of reliance requires that class certification be denied unless plaintiffs can show that the market price was in fact distorted or otherwise can satisfy Rule 23.

Instead of invoking Rule 301 itself, the Fund relies on the Advisory Committee's notes to a version of Rule 301 *that Congress rejected*. See Pet. Br. 36. The *Federal Practice and Procedure* treatise reprints the text invoked by the Fund under the heading "Advisory Committee's Note To *Rejected* Rule 301." 21B Wright & Graham, *Federal Practice and Procedure* 344 (2d ed. 2005) (emphasis added). The distinction between the real Rule 301 and the rejected Rule 301 is significant. Had Congress adopted the rejected Rule 301 (and had *Basic* still cited it), that would have been powerful evidence for a strong presumption placing, as the Fund would have it, "the burden of both production and persuasion on defendants." Pet. Br. 36. But Congress rejected that version precisely to prevent shifting the burden of proof. Motivated by a firestorm of protest, Wright & Graham, *supra*, § 5121, at 355-359 (describing "[t]he Congressional battle"), both Houses of Congress opposed that burden shifting. See House and Senate Judiciary Comm. Notes on Fed. R. Evid. 301, 28 U.S.C. App., pp. 323-324 (2006 ed.).[7] Explaining the vast difference between adopted Rule 301 and the former proposed Rule 301, the Conference Committee Report declared that a presumption against a

---

[7] These notes are part of "the commentary to Rule 301," Pet. Br. 36, and are printed with the Advisory Committee's notes to the rejected Rule.

party "does *not* shift to that party the burden of persuasion on the existence of the presumed fact." *Id.* at 324 (emphasis added).

Notwithstanding Rule 301's text and history, the Fund seems to read *Basic* as adopting a presumption of the sort that was contemplated but rejected in Rule 301. See Pet. Br. 36. But Rule 301 specifically *prohibits* such a novelty. The Rule applies "[i]n all civil actions and proceedings not otherwise provided for *by Act of Congress or by these rules*." Fed. R. Evid. 301 (emphasis added). In adopting a rebuttable presumption while citing Rule 301, *Basic* clearly intended to incorporate, not depart from, the standards of Rule 301.

2. Under those principles, once plaintiffs successfully invoke the presumption of reliance, defendants have "the burden of going forward with evidence to rebut or meet the presumption," Fed. R. Evid. 301—and that is all. A defendant has no duty to "establish the nonexistence" of the fraud-of-the-market prerequisites, as the rejected Rule and the Fund would have it. See Pet. Br. 36. Rather, if defendants cast sufficient doubt on the presumption—that is, if there is enough that a reasonable fact-finder *could* believe that the "link" between the alleged misrepresentation and the price has been "sever[ed]," *Basic*, 485 U.S. at 248, then defendants have rebutted the presumption.

The very case cited by the Fund (Br. 36 n.12) makes that clear. In *ITC Ltd.* v. *Punchgini, Inc.*, 482 F.3d 135, 149 (2d Cir. 2007), the court addressed the presumption of abandonment of a trademark. It held that rebuttal under Rule 301 need not conclusively establish the nonexistence of a fact. Instead, rebuttal is sufficient "as long as the [proffered] evidence *could* support a reasonable jury finding of 'the nonexistence of the presumed fact.'" *Ibid.* (citation omitted and emphasis added). Thus, following "a *prima facie* case of abandonment under the

Lanham Act," the opposing party need "come forward only with such contrary evidence as, when viewed in the light most favorable to [that party], would *permit* a reasonable jury to infer that it had not abandoned the mark." *Ibid.* (emphasis added). At that point, the plaintiff must meet his burden of persuasion. *Ibid.*

The modesty of the economic reasoning that undergirds *Basic*'s presumption also weighs strongly against placing a heavy rebuttal burden on defendants. The four-Justice majority in *Basic* invoked the theory with some tentativeness, relying on "common sense," "probability," "recent empirical studies," and the "applau[se]" of three "commentators," 485 U.S. at 246, to conclude only that "[i]t is *not inappropriate* to apply a presumption of reliance supported by the fraud-on-the-market theory." *Id.* at 250 (emphasis added). *Basic*, moreover, rested on an efficient-market theory that was hotly disputed even when *Basic* was decided. For one thing, rather than relying on the integrity of the market price, many investors attempt to locate undervalued stocks in an effort to "beat the market," thus "betting that the market for the securities they are buying is in fact inefficient." Macey, *The Fraud on the Market Theory: Some Preliminary Issues*, 74 Cornell L. Rev. 923, 925 (1989). Skepticism has grown since: "Doubts about the strength and pervasiveness of market efficiency are much greater today than they were in the mid 1980s." Langevoort, Basic *at Twenty: Rethinking Fraud on the Market*, 2009 Wis. L. Rev. 151, 175 (2009). And the fraud-on-the-market "regime established in *Basic*" has been criticized for shift[ing] money from one shareholder pocket to another at enormous expense." Pritchard, Stoneridge Investment Partners *v.* Scientific Atlanta: *The Political Economy of Securities Class Action Reform*, 2008 Cato S. Ct. Rev. 217, 218 (2008). These concerns weigh dispositively against con-

verting fraud-on-the-market reliance from an ordinary presumption to a categorical imperative.

3. A defendant in this context meets his "burden of going forward with evidence to rebut or meet the presumption," Fed. R. Evid. 301, by making "*[a]ny showing* that severs the link between the alleged misrepresentation and * * * the price received (or paid) by the plaintiff," such as evidence that "the misrepresentation in fact did not lead to a distortion of price." *Basic*, 485 U.S. at 248 (emphasis added). As the Second Circuit has explained, a defendant need only "*submi[t] evidence* to show that the misrepresentations did not affect market price." *Salomon*, 544 F.3d at 485 (emphasis added). And in the Fifth Circuit, "the link [can be] severed by publicly available information that the misrepresentation didn't move the stock price." *Oscar*, 487 F.3d at 265. Even the Fund—while disputing its relevance at class certification—concedes that evidence showing a lack of "'price impact' * * * at the time of the misstatement" would rebut the presumption. Pet. Br. 45; accord U.S. Br. 20.

The evidence submitted here more than adequately rebutted the presumption that investors "relied" on alleged misrepresentations by relying on the market price, because it severed the link between Halliburton's alleged misrepresentations and that market price. Indeed, the Fund's own expert report and event study revealed that Halliburton's stock price did *not* react to any of the alleged misrepresentations when made. J.A. 349a, 391a-394a, 526a, 664a, 721a. And the Fund has never argued to the contrary. Pet. App. 7a n.11, 11a, 116a. Halliburton, moreover, submitted its own expert report and supporting documents, which, along with an examination of the disclosures, showed that none of the price declines on which the Fund relies were attributable to disclosures that corrected the truth of any previous misrepresenta-

tion. J.A. 469a-537a, 691a-721a. This showing constitutes ample evidence that the misrepresentation did not affect the market price, and therefore rebuts the presumption of reliance.

C. Plaintiffs Failed To Respond To The Rebuttal By Showing That The Misrepresentation Distorted The Market Price Or By Otherwise Satisfying Rule 23

When a defendant successfully rebuts the presumption of reliance, the plaintiff must come forward in reply with sufficient proof to either re-establish the presumption or satisfy Rule 23 in some other way.

1. This Court regularly follows that pattern in other contexts. For example, in Title VII cases, a plaintiff who shows membership in a protected class, qualification for a job, and rejection, is entitled to a presumption that he was subjected to discrimination. *Texas Dep't of Community Affairs* v. *Burdine*, 450 U.S. 248, 252-254 (1981). The defendant then must rebut the presumption of discrimination (by producing evidence of legitimate and neutral reasons) with evidence that *could* be believed by the trier of fact. See *id.* at 254 & n.8. If the presumption is so rebutted, then the plaintiff must prove the discrimination case. See *id.* at 255 n.10, 256.

The same approach applies here. To invoke the fraud-on-the-market presumption, the plaintiff must show "threshold facts," such as that material misstatements were relayed to an efficient market. See, *e.g.*, *Basic*, 485 U.S. at 248 n.27. The party opposing certification can rebut the fraud-on-the-market presumption with "any showing" severing the link between the misrepresentation and the price paid by plaintiff. *Id.* at 248-249; Part I.B., *supra*. At that point, the plaintiff must meet the burden of satisfying the Rule 23 factors nonetheless—by either establishing price impact by a preponderance of

the evidence or by otherwise demonstrating why common issues predominate despite individualized issues of reliance.

Consistent with that approach, the Second Circuit has held that once the defendant "submit[s] evidence to show that the misrepresentations did not affect market price," *Salomon*, 544 F.3d at 485, the ultimate burden shifts back to the plaintiff. Thus, "[i]f defendants attempt to make a rebuttal * * * the district judge must receive enough evidence * * * to be satisfied that each Rule 23 requirement has been met." *Id.* at 486. Similarly, in the Fifth Circuit, once the presumption of reliance is rebutted by evidence that "the misrepresentation didn't move the stock price," the plaintiff bears the ultimate burden to prove that "the misstatement actually moved the market." *Oscar*, 487 F.3d at 265.

2. The Fund failed to meet that burden here. Conceding that the misrepresentations did not move the stock price when made, the Fund urged that one could *infer* price impact because Halliburton's stock price declined following "corrective disclosures" that revealed the alleged falsity of the challenged statements. For such a price decline to have probative value as to whether the misrepresentation affected the stock price, however, the price decline must follow a disclosure that is *corrective* of the misrepresentation—*i.e.*, one that reveals the truth obscured by the previous misrepresentation, as opposed to a price decline that follows the release of other negative information. *Basic*, 485 U.S. at 249 (referencing price impact after "corrective statements"); *Oscar*, 487 F.3d at 265; *In re Flag Telecom Holdings, Ltd. Sec. Litig.*, 574 F.3d 29, 41 (2d Cir. 2009) (declining to certify class absent "sufficient evidence on which the lower court could conclude that any of the events revealed the truth about the subject of any of Defendants' alleged misstatements"). A price decline following the release of

mere negative information that does not correct any previous misrepresentation is no indication that the alleged misrepresentation inflated the market price.

To ensure that it was the *misrepresentation* that affected the market price, a plaintiff must show that a later price decline is attributable to the corrective disclosure and not to general market declines or other information unrelated to the truth of the alleged misrepresentation. Pet. App. 117a-118a; *Salomon*, 544 F.3d at 485 (courts must assess whether "other statements in the 'sea of voices' of market commentary were responsible for price discrepancies" instead of the alleged misrepresentation). These requirements parallel the prerequisites this Court recognized when dealing with the issue of loss causation. See *Dura*, 544 U.S. at 347 (requiring price decline "after the truth became known"). *Dura* recognized that a price decline "may reflect *not the earlier misrepresentation*, but changed economic circumstances, changed investor expectations, new industry-specific or firm-specific facts, conditions, or other events, which taken separately or together account for some or all of that lower price." *Id.* at 343 (emphasis added). It is unremarkable that statistically valid proof is required, and that non-fraud causes must be eliminated, to prove a misrepresentation's price impact; junk evidence and unproven correlations are insufficient proof across legal contexts. Indeed, *Basic* itself recognized that invoking the presumption of reliance could overlap with concepts of loss causation, noting that the class's invocation of the rebuttable presumption "established the threshold facts for *proving their loss*." *Basic*, 485 U.S. at 248 (emphasis added).

In this case, the evidence fell woefully short of the required showing. Although the Fund attempted to rely on an inference from later events—disclosures that coincided with declines in price—it utterly failed to show that the declines were properly attributed to correction of the

misrepresentations it challenged. Pet. App. 123a-136a; pp. 46-51, *supra*. Because the absence of price impact prevented the Fund from sustaining the presumption of reliance—and because, absent the presumption, individual issues indisputably predominate—the Fifth Circuit properly affirmed the denial of class certification.

II. Under Both *Basic* And Rule 23, Defendants May Rebut The Presumption Of Reliance At The Class-Certification Stage

The Fund does not dispute that *Basic*'s "rebuttable presumption" is pivotal to the propriety of certification. But it nonetheless urges that defendants cannot seek to defeat certification by rebutting that presumption. That contention is unsound. The essential premise underlying *Basic*'s presumption is that, if the misrepresentations affect the market price, the entire class presumptively relies because most purchasers rely on the market price's integrity. Where a defendant can rebut the presumption of classwide reliance by showing that the alleged misrepresentation did not affect the market price, however, there can be no classwide proof of reliance and individual issues of reliance will predominate. The Fund's and the Government's contrary arguments rest primarily on their effort to characterize the issue as a question of "loss causation" rather than classwide reliance. But once that label is removed, the propriety of addressing this threshold predominance issue at the certification stage becomes apparent. Plaintiffs cannot simultaneously rely upon a rebuttable presumption to obtain certification, while denying defendants the ability to defeat certification by rebutting the presumption.

A. Plaintiffs Seeking Certification Must Present Evidence That They Have Satisfied The Rule 23 Requirements Even If That Evidence Overlaps With The Merits

1. Notwithstanding how it framed the second question presented, the Fund (like the Government) now agrees that courts ruling on certification motions may consider facts that overlap with the merits. Pet. Br. 47; U.S. Br. 23-24. That concession is well founded. Rule 23(b)(3) requires plaintiffs to present enough evidence for the court to "*find[]* that the questions of law or fact common to class members predominate over any questions affecting only individual members." Fed. R. Civ. P. 23(b)(3) (emphasis added).

This Court thus has long recognized that "[e]valuation of many of the questions entering into determination of class action questions is intimately involved with the merits of the claims." *Coopers & Lybrand* v. *Livesay*, 437 U.S. 463, 469 n.12 (1978). As a result, "sometimes it may be necessary for the court to probe behind the pleadings before coming to rest on the certification question." *Gen. Tel. Co. of the Sw.* v. *Falcon*, 457 U.S. 147, 160 (1982). A court must therefore take "a close look at the case before it is accepted as a class action," *Amchem Prods., Inc.* v. *Windsor*, 521 U.S. 591, 615 (1997), which requires a "rigorous analysis" of the Rule 23 requirements. *Falcon*, 457 U.S. at 161.

Courts of appeals thus regularly recognize that "[t]he Rule 23 requirements must be established by at least a preponderance of the evidence." *Brown* v. *Kelly*, 609 F.3d 467, 476 (2d Cir. 2010); see also *Alaska Elec. Pension Fund* v. *Flowserve Corp.*, 572 F.3d 221, 229 (5th Cir. 2009); *In re Hydrogen Peroxide Antitrust Litig.*, 552 F.3d 305, 307, 320 (3d Cir. 2008). The preponderance-of-the-evidence standard recognizes that "the requirements

of Rule 23 must be *met*, not just supported by some evidence." *In re Initial Pub. Offerings Sec. Litig.*, 471 F.3d 24, 33 (2d Cir. 2006) (*IPO*) (emphasis added). Plaintiffs must provide the district judge with "enough evidence, by affidavits, documents, or testimony, to be satisfied that each Rule 23 requirement has been met." *Id.* at 41. In this Court's words, "actual, not presumed, conformance * * * remains * * * indispensable." *Falcon*, 457 U.S. at 160; *Vega* v. *T-Mobile USA, Inc.*, 564 F.3d 1256, 1268-1270 (11th Cir. 2009).

"[B]ecause each requirement of Rule 23 must be met," moreover, "a district court errs as a matter of law when it fails to resolve a genuine legal or factual dispute relevant to determining the requirements." *Hydrogen Peroxide*, 552 F.3d at 320. "Tough questions must be faced and squarely decided, if necessary by holding evidentiary hearings and choosing between competing perspectives." *West* v. *Prudential Sec., Inc.*, 282 F.3d 935, 938 (7th Cir. 2002). For example, "when an expert's report or testimony is critical to class certification, * * * a district court must conclusively rule on any challenge to the expert's qualifications or submissions prior to ruling on a class certification motion." *Am. Honda Motor Co., Inc.* v. *Allen*, 600 F.3d 813, 815-816 (7th Cir. 2010). As the Second Circuit has explained, a district court must make a "'definitive assessment of Rule 23 requirements, notwithstanding their overlap with merits issues,' and *must* resolve material factual disputes relevant to each Rule 23 requirement." *Brown*, 609 F.3d at 476 (quoting *IPO*, 471 F.3d at 41; emphasis added).

2. Despite those longstanding rules, the Seventh Circuit last year became the first court of appeals to hold that a class may be certified under the fraud-on-the-market presumption without considering whether the alleged misrepresentations affected the market price. *Schleicher* v. *Wendt*, 618 F.3d 679 (7th Cir. 2010). The

court hyperbolically equated the Second and Fifth Circuits' requirement "that the contested statements actually caused material changes in stock prices" to an "insist[ence] that before a class can be certified plaintiffs must prove everything (except falsity) to win on the merits." *Id.* at 683. Price impact, the Seventh Circuit, declared, is a "questio[n] on the merits" that "affect[s] investors alike," and is therefore categorically excluded from consideration at the class-certification stage. *Id.* at 685.

That is incorrect. The Seventh Circuit ignored this Court's ruling in *Basic* that a defendant may "rebut the presumption of reliance" by "showing that the misrepresentation in fact did not lead to a distortion of price." *Basic*, 485 U.S. at 248. It likewise ignored *Basic*'s recognition that the presumption of reliance is essential to a plaintiff's ability to satisfy Rule 23(b)(3)'s predominance requirement. *Id.* at 242. And it is in serious tension with the Seventh Circuit's own prior recognition that class-certification issues will often overlap with the merits. See *Am. Honda*, 600 F.3d at 815.[8]

---

[8] *Schleicher* also rests on the false premise that the Fifth Circuit requires proof of loss causation to establish price impact. *Schleicher*'s hypothetical scenario of injured plaintiffs who would be precluded from class certification by the Fifth Circuit's rule (recounted at Pet. Br. 44) is simply wrong. In the hypothetical case, class certification *would be allowed* under the Fifth Circuit's approach because the misrepresentation "increase[d] a stock's price by $1 a share," *Schleicher*, 618 F.3d at 686—and price impact "may be proved * * * by an increase in stock price immediately following the release of positive information." Pet. App. 116a. The same hypothetical also wrongly presumes that a corrective disclosure may come only from the company, *Schleicher*, 619 F.3d at 686-687, when in fact such disclosures may come from a third party. *Nathenson* v. *Zonagen, Inc.*, 267 F.3d 400, 416 (5th Cir. 2001) (corrective disclosures contained in research report from a short seller).

3. *Eisen* v. *Carlisle & Jacquelin*, 417 U.S. 156 (1974), is not to the contrary. In that case, the Court stated that there is "nothing in either the language or history of Rule 23 that gives a court any authority to conduct a preliminary inquiry into the merits of a suit in order to determine whether it may be maintained as a class action." *Id.* at 177. But an over-expansive reading of that language cannot be reconciled with *Coopers & Lybrand* and *Falcon*, both of which recognize that merits and certification issues may overlap. See *Coopers & Lybrand*, 437 U.S. at 469 & n.12; *Falcon*, 457 U.S. at 160.

The point of *Eisen* was not that any overlap with the merits is categorically off limits. As the Second Circuit has observed, *Eisen*'s dictum "was made in a case in which the district judge's merits inquiry had *nothing to do with determining the requirements for class certification.*" *IPO*, 471 F.3d at 33 (emphasis added). Rather, "the district court, after determining that the case was appropriate for class certification, was concerned with which side should bear the cost of notice to the class." *Ibid.* Thus, the statement in *Eisen* should not be "taken out of context and applied in cases where a merits inquiry either concerns a Rule 23 requirement or overlaps with such a requirement." *Id.* at 34. No merits inquiry should be undertaken at the class certification stage unless "necessary to determine a Rule 23 requirement," *Hydrogen Peroxide*, 552 F.3d at 317, but a court may do so for the *different* inquiry into whether a potential class has satisfied its burden under Rule 23.

B. Courts May Consider The Propriety Of Presuming Classwide Reliance When Deciding Class-Certification Issues

1. The Fund and the Government do not deny that courts may consider issues relevant to class certification under Rule 23 even if those issues overlap with the merits. They simply assert that the question the district

court and the Fifth Circuit resolved below—whether the alleged misrepresentations distorted the stock's market price—is irrelevant to Rule 23's requirement that common issues predominate.

But that issue is plainly relevant for the reasons given above. See pp. 15-17, *supra*. *Basic* established the presumption of reliance to enable plaintiffs to satisfy Rule 23(b)(3)'s requirement that common issues predominate by making otherwise individualized issues of reliance subject to classwide proof. 485 U.S. at 228, 230, 242. It did so in the context of upholding a district court's certification of a class. *Id.* at 250. And it recognized that, absent the presumption, "[r]equiring proof of individualized reliance * * * effectively would have prevented [plaintiffs] from proceeding with a class action, since individual issues then would have overwhelmed the common ones." *Id.* at 242.

The Fund and the Government do not dispute that the presumption of reliance is vital to a plaintiff's ability to satisfy Rule 23(b)(3). Given that, it is hard to see how rebuttal of that presumption through a showing that severs the link between the misrepresentation and the presumptively-relied-upon price would not be fatal to class certification. Precisely because the presumption of reliance is essential to proving predominance, "successful rebuttal" must "*defea[t]* certification by defeating the Rule 23(b)(3) predominance requirement." *Salomon*, 544 F.3d at 485; accord *Oscar*, 487 F.3d at 264 ("without [the fraud-on-the-market] presumption, questions of individual reliance would predominate, and the proposed class would fail"); *IPO*, 471 F.3d at 43 ("[w]ithout the *Basic* presumption, individual questions of reliance would predominate over common questions" in most securities actions). Indeed, the predominance inquiry "cannot be made without determining whether defendants can successfully rebut the fraud-on-the-market presumption." *Salomon*, 544 F.3d

at 485. Consequently, the defendant's rebuttal must be considered "prior to class certification." *Id.* at 484.

2. The Fund and the Government assert that a misrepresentation's impact on market price is a "merits" issue unsuitable for consideration prior to class certification. See, *e.g.*, Pet. Br. 3, 25, 35, 36, 40, 47, 48; U.S. Br. 7-8, 22-24. But, as explained above, "[a] contested [Rule 23] requirement is not forfeited in favor of the party seeking certification merely because it is similar or even identical to one normally decided by a trier of fact." *Hydrogen Peroxide*, 552 F.3d at 318.

Rebuttal evidence regarding a misrepresentation's impact on stock price is not considered at class certification to resolve the merits element of reliance (or loss causation). Rather, rebuttal evidence is considered at class certification to assess whether plaintiff may sustain the *classwide* presumption of reliance that exists when a misrepresentation affects the price of stock, and the *class* of plaintiffs claims to have relied on the misrepresentations by relying on the distorted market price. So long as the courts properly recognize that they may address the price impact of the misrepresentation only for purposes of determining whether reliance is best proved classwide or on an individualized basis, it is not error to consider it—any more than it would be error to consider the absence of a common policy affecting all class members in a discrimination case, or the absence of a uniform misrepresentation in a face-to-face fraud case. To the contrary, because classwide reliance is necessary to certification under Rule 23, the district court *must* address that issue.

Putative "merits" issues often bear on the propriety of certification. *Basic* recognizes that "in order to invoke the presumption, a plaintiff must allege and prove" (among other things) that "the misrepresentations were

material." 485 U.S. at 248 n.27.[9] As a result, virtually all of the courts of appeals to consider the issue have held that a plaintiff must establish materiality to invoke the presumption of reliance and obtain class certification.[10] The Fund itself has previously conceded that a plaintiff must show materiality in order to obtain class certification via the presumption of reliance. Pet. 13, 19.[11]

That makes sense. If a misrepresentation is not material, or is not "transmitted through the market price," *Basic*, 485 U.S. at 248, there is no reason to presume that it induced classwide reliance. While materiality and price impact also happen to be merits-related issues, the fact that they are essential to sustaining the presumption of reliance means that they must be assessed at the class certification stage to determine whether individual issues predominate. See *Salomon*, 544 F.3d at 484 (considering

---

[9] Although the Court was describing the court of appeals' holding, it plainly adopted the lower court's materiality prerequisite as its own. *Basic*, 485 U.S. at 248 n.27 ("Given today's decision regarding the definition of materiality * * *, elements (2) and (4) may collapse into one."); see also *Dura*, 544 U.S. at 342 (describing the *Basic* presumption as applying to "material misrepresentation[s]").

[10] *Desai* v. *Deutsche Bank Sec. Ltd.*, 573 F.3d 931, 940 (9th Cir. 2009); *Salomon*, 544 F.3d at 481; *Oscar*, 487 F.3d at 264-265; *In re Poly-Medica Corp. Sec. Litig.*, 432 F.3d 1, 8 n.11 (1st Cir. 2005); *In re PEC Solutions, Inc. Sec. Litig.*, 418 F.3d 379, 387 (4th Cir. 2005); *Gebhardt* v. *ConAgra Foods, Inc.*, 335 F.3d 824, 831 (8th Cir. 2003); *Oran* v. *Stafford*, 226 F.3d 275, 282 (3d Cir. 2000) (Alito, J.); but see *Schleicher*, 618 F.3d at 687. While the Seventh Circuit rejected materiality as a prerequisite to class certification in *Schleicher*, Judges Easterbrook and Posner had previously referred to the "fraud on the market doctrine" as involving "material misstatements." *Stark Trading* v. *Falconbridge Ltd.*, 552 F.3d 568, 572 (7th Cir. 2009)

[11] The Fund apparently no longer believes that materiality is a prerequisite to invoking the presumption of reliance (Pet. Br. 27, 32), no doubt because that would destroy its argument that "merits" elements cannot be considered prior to class certification.

price impact even though it "is identical to an issue on the merits"). In other words, if a plaintiff invokes the fraud-on-the-market presumption to satisfy Rule 23(b)(3), a defendant's rebuttal is nothing but a challenge to certification under Rule 23(b)(3), even though defendants might use similar arguments to challenge the presumption when litigating the merits.[12]

For similar reasons, the Fund's Seventh Amendment argument (Pet. Br. 62-64) is meritless. The Seventh Amendment has *never* precluded district courts from making initial factual determinations relevant to procedural issues. See, *e.g.*, *Shepard* v. *United States*, 290 U.S. 96, 101-102 (1933) (dying declaration may be inadmissible if party "satisfies the judge" it is unreliable). And *denial* of certification—much less allowing rebuttal of an asserted basis for predominance—cannot infringe "the right of trial by jury." U.S. Const. amend. VII. It determines only the form of a suit, individual or class, and not whether it gets to a jury at all.[13] Finally, and most fundamentally, rebuttal of the presumption at the class-certification stage does not address the merits of a 10b-5

---

[12] For that reason, the Fund errs in citing cases like *PolyMedica*, 423 F.3d at 7 n.10, and *Kaplan* v. *Rose*, 49 F.3d 1363, 1378 n.3 (9th Cir. 1994), for the proposition that any rebuttal *must* be at trial. See Pet. Br. 35. The cited language means only that that rebuttal can *also* be at trial, at least where the rebuttal seeks to disprove a merits element. Thus, *PolyMedica* recognized that, "assuming the plaintiff gets the benefit of the rebuttable presumption at the class-certification stage, the defendant may *still* rebut this presumption at trial." 423 F.3d at 7 n.10 (emphasis added). And *Kaplan* simply held that *summary judgment* was not appropriate on an issue because, in light of the conflicting evidence, "the *ultimate* resolution of this question is an issue for trial." 49 F.3d at 1378 n.3 (emphasis added).

[13] The Fund's complaint that summary judgment requires a higher showing than a preponderance, see Pet. Br. 63, is thus short of the mark. Summary judgment disposes of an issue on the merits and for good; denial of certification is not a merits determination.

claim; it addresses a Rule 23 issue. Whether the requirements of Rule 23 are satisfied is never a jury question. Rule 23(b)(3) certification depends on whether "*the court finds*" the prerequisites satisfied. The court's Rule 23 determinations do not bind the trier of fact, whether ultimately in a class or individual action. See, *e.g.*, *Flowserve*, 572 F.3d at 229; *Hydrogen Peroxide*, 552 F.3d at 317-318 & n.19; *IPO*, 471 F.3d at 41.

3. The Fund's primary argument seems to be that a misrepresentation's impact on market price may not be considered at class certification because price impact is by definition an issue common to the class. See, *e.g.*, Pet. Br. 39, 49; U.S. Br. 7, 17; *Schleicher*, 618 F.3d at 685 (rejecting consideration of price impact because it "affects all investors alike"). But that misconceives the relevant inquiry. A question must be resolved prior to class certification where it sheds light on whether common issues predominate over individual ones. The absence of price impact stemming from a misrepresentation is precisely such an issue. Absent price impact there can be no basis for assuring classwide reliance on the misrepresentation via the market price; as a result, individual issues predominate. It makes no difference that the *reason* for a lack of predominance is "common" to all class members. A court may not certify a class if Rule 23(b)(3) is unmet, regardless of whether the reason it is not met applies uniformly.[14]

---

[14] The Fund and the Government suggest that a district court within the Second Circuit does not consider common rebuttal issues prior to class certification, at least with respect to "loss causation." See Pet. Br. 39; U.S. Br. 18. But that is not true with respect to price impact, even when price impact is purportedly shown through declines following allegedly corrective disclosures. *Salomon*, 544 F.3d at 484 (holding that defendant may "rebut the presumption * * * by showing * * * the absence of a price impact"); *In re Am. Int'l Group, Inc. Sec. Litig.*, 265 F.R.D. 157, 182, 186-188 (S.D.N.Y. 2010) (declining to

The Fund's own concessions illustrate the fallacy of its position. The Fund concedes that market efficiency must be established prior to class certification. *Basic*, 485 U.S. at 247 & n.27; Pet. Br. 48 & n.15. But whether a stock trades in an efficient market is, like price impact, an issue common to all members of the class. Yet the Fund correctly recognizes that market efficiency is relevant to class certification and subject to rebuttal at that stage because, without it, the presumption of reliance fails and individual issues predominate. The same is true of a misrepresentation's impact on market price.

Basic recognizes that defendants may rebut the presumption of reliance by "rebut[ting] proof of" any of "the elements giving rise to the presumption," including the "threshold facts" necessary for invoking the presumption, such as materiality and market efficiency. 485 U.S. at 248. The Fund can identify no reason why some evidence rebutting the presumption can be considered at class certification, see Pet Br. 35 (admitting that "defendants can challenge at class certification plaintiffs' evidence of market efficiency"), while rebuttal evidence showing a lack of price impact cannot. Both rebut the presumption of classwide reliance. And, in doing so, both make it all but impossible for a plaintiff to establish that common issues predominate over individual ones.

Ultimately, the Fund and its *amici* misunderstand the nature of the certification inquiry. The fact that evidence *rebutting predominance* is subject to common proof cannot be the "common question" that unites all class members. That would convert the question the court must answer in deciding class certification into a common issue that makes certification appropriate. Yet that circular

---

certify class with respect to two alleged misrepresentations because stock price did not significantly decline following alleged corrective disclosures).

reasoning is effectively what the Fund and its *amici* ask this Court to adopt: They urge this Court to treat whether or not plaintiffs may assert classwide reliance based on a distorted market price as a common question favoring certification. But whether there was a distorted market price upon which presumptive reliance can be premised is the very question that determines whether there is a classwide reliance issue that unites class members or whether there are instead individualized reliance issues that separate them.

4. The case law on which *Basic* relied in creating its presumption of reliance demonstrates that the Court did not intend to create a rebuttable presumption for use at certification, yet—with no explanation—render that "rebuttable presumption" *irrebuttable* at certification. *Basic* invoked the presumption of reliance in *Affiliated Ute Citizens of Utah* v. *United States*, 406 U.S. 128, 153-154 (1972), which arises when an issuer makes material omissions despite a duty to disclose. See *Basic*, 485 U.S. at 243, 245. Courts have always understood that the *Affiliated Ute* presumption was rebuttable at the class-certification stage. Less than a month before *Basic* was handed down, for instance, the Eleventh Circuit spent considerable energy deciding whether "[t]he presumption, derived from *Ute*" had been rebutted by the defendant. *Ross* v. *Bank South, N.A.*, 837 F.2d 980 (11th Cir. 1988). That discussion, *id.* at 993-998, took place in Part II, "Class Certification"—*not* in Part III, "Merits," where the Fund's theory would place it.[15] While the court

---

[15] The Eleventh Circuit subsequently took the case *en banc*, where (as to some issues) it departed from the panel, finding no securities-fraud violation. See *Ross* v. *Bank South, N.A.*, 885 F.2d 723, 732 (11th Cir. 1989) (*en banc*). The panel opinion thus is cited here merely as an illustration of when the presumption could be rebutted (a conclusion unchallenged by the *en banc* court).

concluded that defendants had not successfully rebutted the presumption, *id.* at 997, it went out of its way to emphasize that it did "not, of course, intend to preclude a district court from exercising its discretion in a proper case to *deny certification*" in cases where rebuttal was successful. *Id.* at 996 n.11 (emphasis added).

The Fund places great weight on a single phrase buried in a single footnote in *Basic* to support its claim that defendant's rebuttal must be made at "trial." Pet. Br. 35 (citing 485 U.S. at 249 n.29); see also U.S. Br. 7, 16-17. The footnote, however, discusses a specific scenario where, "despite petitioners' allegedly fraudulent attempt to manipulate market price, news of the merger discussions credibly entered the market and dissipated the effects of the misstatements." *Basic*, 485 U.S. at 248-249. In that context, the Court reasoned that a defendant could show at "trial" that certain members of the class—"those who traded *Basic* shares *after the corrective statements*"—lacked a "connection to the fraud." *Id.* at 249 & n.29 (emphasis added). If some plaintiffs were excluded from the class for this reason, the Court explained, "the District Court retain[s] the authority to amend the certification order as may be appropriate." *Id.* at 249 n.29.

The Court's statement that "[p]roof *of that sort* is a matter for trial" means at most that, if new information comes to light pertaining to *class definition*, the Court may amend the certification order at trial. It does not mean that defendants cannot, to oppose class certification, show that the presumption of reliance is inapplicable across the board. Such a reading of footnote 29 would set that language at war with the rest of *Basic*, which repeatedly recognizes that a variety of challenges to the presumption, including whether the market was efficient and whether the price was distorted by the alleged misrepresentations, are properly raised when resisting class certification.

In any event, *Basic* was decided when old Rule 23(c)(1)(C) allowed courts to avoid tough calls early on by conditionally certifying classes. 485 U.S. at 249 n.29. But *Basic* could not have predicted that dissatisfaction with a too-lenient practice would result in deletion of the authority to certify classes conditionally. And, as amended in 2003, Rule 23 requires reaching a certification decision "[a]t an early practicable time," Fed. R. Civ. P. 23(c)(1)(A), eliminating the old Rule's perceived urgency. Moreover, consistent with *Falcon*, 457 U.S. at 160, Rule 23 now permits certification only once the court is "satisfied that the requirements of Rule 23 have been met"—and if the court is not yet satisfied, the court "should refuse certification until [those requirements] have been met." Advisory Comm. Notes on Fed. R. Civ. P. 23 (2003 amends.), 28 U.S.C. App., p. 144 (2006 ed.). Consequently, courts now routinely hear expert testimony and resolve complex factual disputes at the class-certification hearing rather than postponing such issues until trial. Thus, even if *Basic*'s reference to proof at "trial" had any bearing on the timing of rebuttal evidence when *Basic* was decided, overreading that footnote would be particularly inadvisable now.

C. Postponing Consideration Of Rebuttal Evidence Until After Certification Harms Judicial Economy

The Fund's position effectively reduces to the claim that, although the presumption of reliance is rebuttable, defendants—already disadvantaged through plaintiffs' use of the presumption—should be rendered defenseless in opposing it at the certification stage.[16] That view does

---

[16] Rebuttal is, in fact, one of few tools for already nearly defenseless certification-stage securities-fraud defendants. Nearly a decade ago, 94% of putative securities class actions were certified. Roosevelt,

not merely improperly render the rebuttable presumption conclusive at the class certification stage. Cf. *John R. Sand & Gravel Co.* v. *United States*, 552 U.S. 130, 137 (2008) ("the word 'rebuttable' means that the presumption is not conclusive"). It also imposes the enormous costs and pressures of class certification based upon a minimal showing, while requiring defendants to wait until trial to prove that the class should not have been certified in the first place.

1. That result cannot be reconciled with the notions of "fairness, public policy, * * * probability, [and] judicial economy," on which *Basic* relied in creating its presumption of reliance. 485 U.S. at 245. To defer for merits resolution questions essential to whether the case should have proceeded as a class action in the first instance is wasteful in the extreme. It is unfair to absent class members, who may suffer the preclusive effects of an adverse decision due to class counsel's decision to pursue certification based on a classwide reliance theory without ever examining whether absent class members could make a better showing individually. And "[t]he practical consequences of an expansion" for defendants are stark. *Stoneridge Inv. Partners, LLC* v. *Scientific-Atlanta, Inc.*, 552 U.S. 148, 159, 163 (2008). The Court has repeatedly cautioned that "extensive discovery and the potential for uncertainty and disruption in a lawsuit allow plaintiffs with weak" securities fraud "claims to extort settlements from innocent companies." *Ibid.* (citing *Blue Chip Stamps* v. *Manor Drug Stores*, 421 U.S. 723, 740-741 (1975)).

That prospect is grave once a class is certified. Class certification is usually the entire ballgame for defendants. "Certification of a large class may so increase the

---

Defeating Class Certification in Securities Fraud Actions, 22 Rev. Litig. 405, 407 (2003).

defendant's potential damages liability and litigation costs that he may find it economically prudent to settle and to abandon a meritorious defense." *Coopers & Lybrand*, 437 U.S. at 476; accord *Shady Grove Orthopedic Assocs., P.A.* v. *Allstate Ins. Co.*, 130 S. Ct. 1431, 1465 n.3 (2010) (Ginsburg, J., dissenting) ("A court's decision to certify a class * * * places pressure on the defendant to settle even unmeritorious claims"). Judge Friendly described such settlements as "blackmail." Friendly, *Federal Jurisdiction: A General View* 120 (1973). Certifying fraud-on-the-market classes without affording defendants the opportunity to rebut the presumption of reliance will inevitably lead to the settlement of countless marginal cases—indeed, cases that are not only meritless, but which never should have been certified—because the amounts at stake are simply too enormous to justify the risk of litigation. That, in turn, would give rise to more frivolous lawsuits. See Bone & Evans, *Class Certification and the Substantive Merits*, 51 Duke L.J. 1251, 1302 (2002). By allowing rebuttal prior to class certification, "[t]he law guards against a flood of frivolous or vexatious lawsuits." *Salomon*, 544 F.3d at 484.

2. "Concerns with the judicial creation of a private cause of action" under Section 10(b) also "caution against its expansion" here. *Stoneridge*, 552 U.S. at 165. The fact that the Fund's claim derives from a judicially created cause of action—*and* a judicially created presumption of reliance—doubly counsels against allowing certification of classes without offering defendants the opportunity of rebuttal. *Stoneridge*'s concerns about the Court's expansion of its own jurisdiction, *id.* at 164-165, are only compounded where the Court is asked to allow judicially implied claims to proceed as a far-reaching class without allowing rebuttal of a presumption the Court itself created to ease the burden of complying with Rule 23.

To be sure, the securities laws "seek to maintain public confidence in the marketplace * * * by deterring fraud." *Dura*, 544 U.S. at 345. But they are not intended "to provide investors with broad insurance against market losses." *Ibid.* (citing *Basic*, 485 U.S. at 252 (White, J., dissenting)). Allowing enormous classes to be certified based on a judicially created presumption where the evidence shows that the market price was not distorted hardly deters fraud. Rather, it punishes innocent defendants (and their current shareholders) who must settle cases after certification to avoid the massive risks and expense of litigation. Such settlements in effect provide "insurance against market losses"—such as the price declines here—that are not attributable to fraud by defendants. *Ibid.*; see *id.* at 347-348 (recognizing that a rule that promotes settlement of meritless cases improperly "transform[s] a private securities action into a partial downside insurance policy").[17]

D. A Defendant's Right To Rebuttal Should Not Be Denied At Class Certification Because Of A Purported Need For Merits Discovery

1. The Fund and the Government protest that it is unfair to assess whether a misrepresentation affected market price at the "threshold" class-certification stage without "merits discovery." Pet. Br. 52; U.S. Br. 26-27. But district courts are amply capable of deciding how much discovery is necessary before certification issues are resolved. Besides, given the extraordinary discovery pro-

---

[17] The Fund (like the Seventh Circuit in *Schleicher*) argues that Congress's failure to amend the PSLRA to address the presumption of reliance somehow supports the Fund's position. But that argument merely presumes that existing law favors the Fund, and thus begs the question presented. Halliburton seeks nothing more than a proper application of *Basic* and Rule 23, not a judicial amendment to the securities laws.

vided in this case, those protests ring particularly hollow. The motion for class certification here was filed *five years* after the initial complaint, after Halliburton produced over *600,000 pages* of discovery. The Fund never asked the district court for additional discovery in connection with its class-certification motion. Nor did it claim that insufficient discovery hampered its effort to show that alleged misrepresentations affected market prices. To the contrary, the Fund argued that it had "satisfied th[at] burden through the submission of the Nettesheim expert report." J.A. 155a. It emphasized that Nettesheim reviewed "all publicly available, relevant information for the Class Period." *Ibid.* The Fund did not complain of insufficient discovery on appeal. Pet. C.A. Br. 52. Nor did its certiorari petition identify specific issues on which additional discovery was needed.

That is hardly surprising. In many cases, there will be scant reason for discovery before deciding certification issues. As *Oscar* observed, the "proof" for "the fraud on the market regimen" often "is drawn from public data and public filings." 487 F.3d at 267. *Basic* also recognized that, ruling that the presumption of reliance is assessed by considering "public" statements and the effect of those statements on "market price." 485 U.S. at 248. While the Government complains that "full consideration of loss causation is a detailed and complex inquiry," U.S. Br. 26, it does not identify any *discovery* that is necessary to determine whether misrepresentations moved the market. It may be that expert testimony is often required to demonstrate that stock-price movement resulted from the misrepresentation and not something else. U.S. Br. 27. But expert testimony is common in modern class-certification proceedings. And the necessity for expert testimony to evaluate *publicly available*

information does not show why discovery is needed to prove price impact before class certification.[18]

Securities-fraud plaintiffs already routinely use event studies and expert testimony to demonstrate market efficiency, which undisputedly must be proven to invoke the presumption. Cf. *Cammer* v. *Bloom*, 711 F. Supp. 1264, 1287 (D.N.J. 1989) (to establish market efficiency, a plaintiff must prove stock price reacted to unexpected company-specific news). The same event studies used to show market efficiency are often also used to show that the alleged misrepresentations affected the market price. See, *e.g.*, Fisher, *Does the Efficient Market Theory Help Us Do Justice in a Time of Madness?*, 54 Emory L.J. 843, 871, 878 (2005); *In re Xcelera.com Sec. Litig.*, 430 F.3d 503, 512 & n.10, 513 (1st Cir. 2005) (affirming finding of market efficiency where plaintiffs presented an "event study" showing that stock "reacted strongly" to corrective disclosures). The Fund did just that here, proferring the same event study to address both market efficiency and price impact. See J.A. 590a-592a.

In any event, even if there are some instances where "merits" discovery may be necessary to establish a misrepresentation's impact on market price, that is no reason to exclude consideration of this issue at class certification. Where disputed "merits" issues are relevant to the Rule 23 requirements, a district judge has ample discretion to permit necessary discovery—by plaintiffs seeking to prove price impact or defendants seeking to disprove it—before ruling on class certification. *Salomon*, 544 F.3d at 486; Advisory Comm. Notes on Fed. R.

---

[18] After *Salomon*, district courts within the Second Circuit have routinely assessed price impact and certified classes based upon expert analysis of publicly available information. *E.g.*, *Am. Int'l Group*, 265 F.R.D. at 182, 186-188; *Fogarazzo* v. *Lehman Bros., Inc.*, 263 F.R.D. 90, 102-106 (S.D.N.Y. 2009).

Civ. P. 23 (2003 amends.), 28 U.S.C. App., p. 144 (2006 ed.) ("it is appropriate to conduct controlled discovery into the 'merits,' limited to those aspects relevant to making the certification decision on an informed basis").

2. The Fund nonetheless devotes considerable energy to fact-bound claims regarding specific items of discovery it now purports to desire. Pet. Br. 52-56. But the demand that class certification be deferred pending further discovery was neither pressed nor passed on below. See p. 44, *supra*. As a result, this Court should not address it in the first instance. *Nat'l Collegiate Athletic Ass'n* v. *Smith*, 525 U.S. 459, 469 (1999).

In any event, the claims lack merit. The Fund now asserts (Br. 53) that it needed discovery to "parse the effect of the culpable from the non-culpable news" allegedly contained in Halliburton's December 21, 2000 press release. That press release attributed the $95 million charge Halliburton was taking to multiple causes—one disclosure the Fund identifies as "correcting" a prior alleged misstatement ("negotiations with customers regarding cost increases" on projects where claims were not resolved "as originally anticipated"), S.A. 520, and another that was concededly just unrelated bad news ("changes in market conditions," including "labor disturbances" abroad). See S.A. 520; Pet. App. 134a-135a. According to the Fund, even though the evidence showed that the press release was not corrective of anything (see Pet. App. 132a-136a), it needed merits discovery "to determine the degree to which overruns were actually due to labor disturbances." Pet. Br. 53. But that makes little sense. The question is how *public markets* responded to public disclosures and, more specifically, the degree to which *public markets* were reacting to one piece of bad news as opposed to another. Halliburton's *non-public* internal documents, never released to the market, have no bearing on that.

The necessary analysis that the Fund failed to perform here is regularly conducted based on public information. Indeed, the Fund's own expert testified that she had previously performed statistical analyses that separated the price effects of multiple disclosures, but she "was asked not to do [so]" in this case. J.A. 402a-403a; Pet. App. 131a.[19] And courts routinely require plaintiffs to prove that price declines stem (at least in part) from corrective disclosures and not from the release of negative (but non-culpable) news. *E.g.*, *Flag Telecom*, 574 F.3d at 36 ("*Dura* requires plaintiffs to disaggregate"); *In re Vivendi Universal S.A. Sec. Litig.*, 634 F. Supp. 2d 352, 369-370 (S.D.N.Y. 2009) (holding that "[p]laintiffs [h]ave [a]dequately [d]isaggregated [c]ompeting [c]ausal [e]vents").[20] *Dura* recognizes that a price decline "may reflect not the earlier misrepresentation, but changed economic circumstances, changed investor expectations, new industry-specific or firm-specific facts, conditions, or other events, which taken separately or together account for some or all of that lower price." 544 U.S. at 343.

---

[19] Econometricians can craft event studies or other analyses that "disaggregate" the effects on market price stemming from various statements. Bruegger & Dunbar, *Estimating Financial Fraud Damages with Response Coefficients*, 35 J. Corp. L. 11, 25 (2009); Nielsen & Prowse, *Securities Litigation: Dura's Impact on Damages*, 22 InSights, July 2008, at 7–8, 10 n.17; Ferrell & Saha, *The Loss Causation Requirement for Rule 10b-5 Causes of Action*, 63 Bus. Law. 163, 168–170 (2007).

[20] Quoting *Schleicher*, 618 F.3d at 686, the Fund argues that "when true and false statements are made together it is often impossible to disentangle the effects with any confidence." Pet. Br. 67. That unsupported assertion is simply wrong. See n.19, *supra*. And, in any case, the Fifth Circuit does not require "proof that some percentage of the drop was attributable to the corrective disclosure," but only "some empirically-based showing that the corrective disclosure was more than just present at the scene." *Oscar*, 487 F.3d at 271. That is hardly an "impossible" standard to meet.

Those *public* facts may influence the price, and their *public* impact must be discerned. Documents that never reached the public shed no light on how, or why, public markets were responding.

The Fund also claims it needed discovery because the Fifth Circuit "effectively requires proof of scienter" to establish price impact. Pet. Br. 53; see *id.* at 53-56; U.S. Br. 27 n.4. But the court of appeals expressly disavowed any requirement that the Fund prove scienter or intentional fraud. Pet. App. 123a n.35 ("a plaintiff need not prove at the class certification stage intentional fraud by the defendant"); *Flowserve*, 572 F.3d at 230 (rejecting the rule that "a fraud causes a loss only if the loss follows a corrective statement that specifically reveals the fraud"). The court simply held that a negative disclosure that does not "reveal the truth of the previously misleading statement is insufficient to establish" price impact. Pet. App. 118a.[21] The various snippets cited by the Fund (Br. 54 & n.17) are simply other ways of stating the same standard, see Pet. App. 121a-122a, and are no different from tests used in other courts of appeals. See n.21, *infra*. They ensure that the later disclosure claimed to be "corrective" must indeed *correct* the earlier representation. None requires the Fund to establish Halliburton's state of mind at the time the alleged misrepresentation was made.

---

[21] This test derives from *Dura*, 544 U.S. at 347 (requiring price decline "after the truth became known"), and variations have been adopted by the lower courts. See *Katyle* v. *Penn Nat. Gaming, Inc.*, — F.3d —, 2011 WL 857144 at *7 (4th Cir. 2011); *Flag Telecom*, 574 F.3d at 41; *In re Williams Sec. Litig.*, 558 F.3d 1130, 1139 (10th Cir. 2009); *Metzler Inv. GMBH* v. *Corinthian Colleges, Inc.*, 540 F.3d 1049, 1065 (9th Cir. 2008); *McCabe* v. *Ernst & Young, LLP*, 494 F.3d 418, 425-426 (3d Cir. 2007); *Ray* v. *Citigroup Markets, Inc.*, 482 F.3d 991, 995 (7th Cir. 2007).

The Fund claims that the court of appeals held that a June 28, 2001 statement was not corrective because it "did not indicate that Halliburton *knew* of Harbison-Walker's financial difficulties prior to the announcement." Pet. Br. 55. But the Fund's claim actually failed because the June 28, 2001 statement did not correct any misstatement previously *conveyed to the market*. "The June 28, 2001, press release does not correct any specific misrepresentation by revealing a previously obscured truth." Pet. App. 125a; see *id.* at 125a-127a. The Fifth Circuit's analysis thus turned on the state of the market's knowledge, not on Halliburton's scienter.

That ruling was clearly correct. In June 2001, Harbison-Walker unexpectedly "asked Halliburton to provide financial assistance for asbestos claims that Harbison-Walker had previously agreed to assume." Pet. App. 124a. Halliburton promptly disclosed that in a June 28, 2001 press release, announcing that it would need to add new asbestos reserves of $50 to $60 million to cover this unexpected liability; Halliburton's stock declined. Pet. App. 124a-125a, S.A. 523. That press release, however, was not a corrective disclosure that revealed the falsity of a prior statement. To the contrary, Halliburton's 10-Ks—filed much earlier—had repeatedly disclosed both Harbison-Walker's agreement to indemnify Halliburton and that the indemnified claims were *not* previously included in Halliburton's asbestos reserve. S.A. 479-480; see Pet. App. 126a. The market thus knew that, if Harbison-Walker became unable to fulfill its agreement for the asbestos liability, Halliburton might be liable. S.A. 461, 480; Pet. App. 126a. Indeed, the Fund's own expert admitted that Halliburton had not represented that Harbison-Walker "will never request or need our assistance on any of the asbestos claims they agreed to assume." J.A. 415a; Pet. App. 125a ("Plaintiff makes no argument that Halliburton made prior statements about exposure from

claims related to Harbison-Walker."); Pet. App. 16a ("[t]here is no allegation" that "Harbison-Walker required Dresser's assistance prior to this disclosure").

Thus, the disclosure that Harbison-Walker in fact needed financial assistance in June 2001 did not correct a prior false statement. It simply revealed new information. Where the market responds to new information rather than the correction of a prior misrepresentation, the resulting price decline by definition is no evidence that the market price was previously distorted by a misrepresentation. In any event, the Fund cannot show that the district court erred in declining to defer the class-certification ruling pending further discovery where no such request was made.[22]

III. The Court Of Appeals' Decision Should Be Affirmed Because The Fund Failed To Prove That The Alleged Misrepresentations Affected The Market Price

The court of appeals correctly held that class certification is improper. The evidence amply rebutted *Basic*'s presumption of classwide reliance on a distorted market price by showing that the alleged misrepresentations did not affect the market price. The Fund's own expert ad-

---

[22] The same analysis disposes of the Fund's argument that it needed discovery into whether the announcement of an adverse jury verdict constituted a corrective disclosure. Pet. Br. 56. Analysts saw the verdicts as unexpected. Pet. App. 25a-26a, 128a & n.43. And Halliburton's previous statements notified the markets that bad verdicts could happen; that its asbestos reserves were merely estimates, based upon the number of "open" (not potential) claims and Halliburton's historical cost of resolving such claims; and that adverse court rulings could materially impact the resolution of asbestos claims. Pet. App. 127a; S.A. 479-480, 503. In this context, the adverse jury verdicts were the quintessential unexpected, negative events that cannot serve as corrective disclosures, and thus cannot demonstrate an alleged misrepresentation's impact on market price.

mitted that her event study revealed that Halliburton's stock price did *not* react to any of the alleged misrepresentations. J.A. 349a, 391a-394a, 526a, 664a, 721a; Pet. App. 11a. And the Fund has never argued otherwise. Pet. App. 7a n.11, 116a. That alone constitutes sufficient evidence that the misrepresentation did not affect the market price and rebuts the presumption of reliance. See pp. 19-24, *supra*. Halliburton's expert further rebutted the presumption by showing that none of the price declines identified by the Fund's event study resulted from corrective disclosures. J.A. 469a-537a, 691a-721a.

Despite that successful rebuttal showing, the Fund never succeeded in re-establishing the presumption of reliance, which was its only asserted means to satisfy Rule 23. See pp. 24-27, *supra*. The Fund urged the courts to infer that the alleged misrepresentations distorted the market price because, according to the Fund, the stock's price declined in response to alleged corrective disclosures. In thorough opinions, however, both the district court and the court of appeals properly concluded that the Fund failed to link the declines in Halliburton's stock price to corrective disclosures (as opposed to other factors), and thus did not support an inference that the alleged misrepresentations had affected the market price. Other than the Fund's perfunctory assertion that it was entitled to additional discovery, Pet. Br. 52-56, neither the Fund nor the Government claim that the court of appeals' corrective-disclosure analysis was substantively defective. To the contrary, the Fund's *only* basis for requesting reversal of the judgment below is that it was improper to consider price impact (or "loss causation," as the Fund misstates it) at the class-certification stage. Pet. Br. 68. Because that claim lacks merit—and because the presumption of reliance was conclusively rebutted—there was no error in denying class certification.

CONCLUSION

The judgment of the court of appeals should be affirmed.

Respectfully submitted.

INTRODUCTION AND SUMMARY

The district court held that plaintiff had met each of the requirements of Rule 23 for class certification. Pet. App. 4a, 54a. The court nonetheless denied class certification on the ground that plaintiff had not proven loss causation on the merits, a requirement set out in the Fifth Circuit's decision in *Oscar Private Equity Invs. v. Allegiance Telecom, Inc.*, 487 F.3d 261 (5th Cir. 2007). Pet. App. 4a, 54a.

The Fifth Circuit affirmed, reiterating that plaintiffs are "required to prove loss causation" in order to obtain class certification, Pet. App. 115a, a requirement the court described as "rigorous," *id.* at 130a. As one judge explained at oral argument, by requiring proof of loss causation, "we did away with Rule 23 virtually." Pet. 8 n.4.

The Fifth Circuit is the only court that requires plaintiffs to prove loss causation in order to trigger the fraud-on-the-market presumption at class certification. Its rule has been rejected by the Second, Third, and Seventh Circuits, *see In re Salomon Analyst Metromedia Litig.*, 544 F.3d 474 (2d Cir. 2008); *In re DVI Inc., Sec. Litig.*, Nos. 08-8033, 08-8045, -- F.3d --, 2011 WL 1125926 (3d Cir. Mar. 29, 2011); *Schleicher v. Wendt*, 618 F.3d 679 (7th Cir. 2010); and numerous district courts in other circuits, *see* Pet. 15-17. In requiring proof of loss causation, the Fifth Circuit has acknowledged that it is conducting a "merit inquiry" at class certification, *Oscar*, 487 F.3d at 267, not to

determine whether the requirements for class certification under Rule 23 are met, but to "tighten" the requirements for class certification because class certification "bestows upon plaintiffs extraordinary leverage, and its bite should dictate the process that precedes it." *Id.* at 264-65, 267.

The Fifth Circuit's rule is wrong. The critical question at class certification under Rule 23(b) is whether common questions will predominate over individual ones. Proof of loss causation is not required to establish that common questions will predominate. Indeed, all agree in this case that "loss causation stands or falls on a classwide basis". Resp. Supp. Br. In Opp. 9. Instead, the Fifth Circuit requires proof of loss causation because it believes that class certification rules need to be "tightened." But the Fifth Circuit is not authorized to add its own requirements for class certification to those set out in Rule 23 based on its own policy preferences. And the effect of the Fifth Circuit's rule is a substantial one: it requires that district courts conduct mini-trials on the issue of loss causation under a preponderance of the evidence standard, rather than the disputed-issue-of-material-fact summary judgment standard that normally determines whether a plaintiff's case reaches a jury.

Nothing in this Court's decision in *Basic Inc. v. Levinson*, 485 U.S. 224 (1988), supports the radical approach taken by the Fifth Circuit. In *Basic*, this Court held that a plaintiff in a private securities fraud case may establish a rebuttable presumption of reliance through the fraud-on-the-market theory, which presumes that "the market

price of shares traded on well-developed markets reflects all publicly available information," including "any public material misrepresentations," and "[a]n investor who buys or sells stock at the price set by the market does so in reliance on the integrity of that price." *Basic*, 485 U.S. at 246-47. The Court said nothing about the separate element of loss causation, and it did not suggest that it was modifying any of the requirements for class certification under Rule 23.

Defendants attempt to justify the Fifth Circuit's rule by first narrowing the rule and then trying to link it to *Basic*. Despite defendants' revisionism, it is clear that the Fifth Circuit requires proof of *loss causation*, not just validation of the fraud-on-the-market theory of *reliance*. Indeed, the Fifth Circuit in this case found that plaintiff had established the prerequisites for invoking the fraud-on-the-market theory, Pet. App. 115a, but then decided the class could not be certified because plaintiff did not show loss causation. Contrary to defendants' contention, the Fifth Circuit requires plaintiffs to prove loss causation on the merits to obtain class certification, regardless of their theory of loss or whether defendants make any effort to dispute the issue.

Defendants also argue that the Fifth Circuit requires proof of loss causation only to determine whether a material misrepresentation has distorted the stock's price, and contends that this showing may be required under *Basic*. They are wrong for several reasons. First, as this Court explained in *Dura Pharms, Inc. v. Broudo*, 544 U.S. 336, 342-43

(2005), loss causation and price distortion are not the same, and an inability to prove loss causation does not show that a stock's price was not distorted by fraud. Second, requiring proof of price distortion or loss causation on the merits is not appropriate at class certification. The appropriate question at class certification is whether common questions of law or fact predominate, not whether the plaintiff will prevail on the merits. Third (and related), *Basic* does not require plaintiffs to prove that a material misrepresentation distorted a stock's price or ultimately caused a loss; it *presumes* a misrepresentation would distort the stock price in an efficient market. Fourth, *Basic*'s statement that defendants may rebut the fraud-on-the-market presumption does not justify requiring plaintiffs to make a merits showing as a prerequisite for class certification; so long as rebuttal of the presumption will turn on common questions, it should be considered at summary judgment or at trial, not at class certification.

By requiring a showing of likely success on the merits on the issue of loss causation at class certification, the Fifth Circuit's rule is contrary to this Court's decision in *Eisen v. Carlisle & Jacquelin*, 417 U.S. 156 (1974), and Federal Rule of Civil Procedure 23. As the district court's and court of appeals' lengthy factual analyses demonstrate, the burden of proving loss causation is complex. The Fifth Circuit's decision to place that burden on plaintiffs at class certification has real practical significance: it requires plaintiffs to prove an essential element of their case at a threshold stage of the litigation—often without adequate discovery—

thereby preempting the merits inquiry that occurs at summary judgment under the disputed issue of material fact standard and usurping the jury's role in resolving disputed loss-causation issues at trial. There is no basis in Rule 23 or any of this Court's decisions for such a rule.

FACTS

The district court denied defendants' motion to dismiss, holding that plaintiff had properly alleged a violation of the federal securities law. USCA5 4185-87, 6467. At class certification, the court held that plaintiff had satisfied the requirements of Rule 23(a), and that class certification would be appropriate on the ground that common issues predominated over individual interests under Rule 23(b), were it not for the Fifth Circuit's requirement of proving loss causation. Pet. App. 4a, 54a.

The defendants did not seek to rebut plaintiff's proof that the market for the stock of Halliburton, a large public company whose stock is actively traded, was efficient. Pet. App. 115a. Nor did defendants seek to rebut the presumption of reliance that *Basic* holds results from the finding of an efficient market. Nor do defendants identify any other issue that would not be common to the class members. Instead, defendants opposed class certification on the ground that plaintiff had not proven loss causation by a preponderance of the evidence. Relying on *Oscar*, defendants argued that the sufficiency of plaintiff's claim of loss causation should be tested at the class certification stage

rather than at summary judgment or at trial, and that dueling experts or disagreements about the evidence mean plaintiff loses rather than having an opportunity to try its case to a jury.

The courts' analysis of loss causation in this case makes plain how severely the Fifth Circuit's rule "tightens" the requirements for class certification. Plaintiff was required to prove almost its entire case—not just that there is a presumption that the market would account for defendant's material misrepresentations—and to do so under a uniquely exacting standard. Where defendants released other bad news on the days it made certain of its corrective disclosures, plaintiff was required to disaggregate the effects of the corrective disclosures from the other bad news and to prove that it was the material misstatements—not some other news—that caused the decline in market price. Where there was no other possible cause of a price decline, plaintiff was required to prove that the disclosure revealed that the prior representations had been not merely wrong but fraudulent, and plaintiff was required to make these showings at the class certification stage, before the completion of discovery and summary judgment motions, by at least a preponderance of the evidence (and in certain cases by excluding the possibility that a reasonable juror could find against plaintiff).

For example, Halliburton made numerous public misrepresentations regarding its asbestos exposure. On November 15, 1999, Halliburton represented that its reserves of $30 million were

"adequate to cover the estimated losses from asbestosis litigation" (pending claims only), USCA5 4240 (at ¶ 119), and on January 31, 2001, it represented that "prospective asbestos liabilities . . . should have minimal adverse impact on the company going forward." USCA5 4265 (at ¶ 157).

On July 25, 2001, Halliburton represented that accruing $60 million in loss reserves would be "prudent" for "the potential exposure we have for this asbestos litigation." USCA5 4274. On August 22, 2001, Halliburton also said that "asbestos exposure, concerns appear to be overblown" and that Halliburton's asbestos claims are a "manageable problem." USCA5 4276.

On December 4, 2001, Halliburton disclosed a $65 million verdict by a Texas jury, and three other judgments totaling $35.7 million against Dresser (Halliburton's subsidiary) on behalf of 100 asbestos plaintiffs arising from an alleged breach of a purported settlement agreement. USCA5 6959. Halliburton's stock dropped 3.7% on December 4 and 3.8% on December 5. USCA5 6960. On December 7, 2001, Halliburton disclosed a $30 million asbestos verdict, handed down on December 5 against Dresser. USCA5 6961-62, 7752-54. Halliburton's stock plummeted that day by 42.7%. USCA5 6963.

Several analysts issued reports on December 7 that sounded the alarm about Halliburton's asbestos liability. TheStreet.com declared: "Halliburton Buried as Investors Stopped Believing": "Halliburton's share dove to nine-year lows . . . as

investors lost faith in the company's claims." USCA5 4577. An analyst for Salomon Smith Barney dropped his price target to $20 from $36, citing mounting asbestos liabilities and noted: "The specter of lawsuits spiraling out of control is likely to adversely impact the stock for the foreseeable future . . . ." USCA5 6962. Another analyst with Jefferies & Co. said: "We now believe [Halliburton's] asbestos-related net liabilities could be significantly higher than currently estimated," and an analyst from UBS Warburg downgraded his price target from $38 to $24 because of Halliburton's asbestos liability. *Id.*

Defendants' own expert acknowledged that she was not aware of any other adverse news released on December 7, except a change in Moody's rating of Halliburton, which she admitted reflected the recent information regarding Halliburton's asbestos exposure. USCA5 8105, 8107-08. Nevertheless, the courts below held there was no loss causation.

ARGUMENT

I. PROOF OF LOSS CAUSATION IS NOT A PREREQUISITE TO THE FRAUD-ON-THE-MARKET PRESUMPTION

A. The Fifth Circuit Requires Plaintiffs to Prove Loss Causation

Defendants are wrong to contend (Br. 9 & n.2) that the Fifth Circuit does not require plaintiffs to prove loss causation as a prerequisite for class

certification. As the Fifth Circuit said in *Oscar*: "Essentially, we require plaintiffs to establish loss causation in order to trigger the fraud-on-the-market presumption." *Oscar*, 487 F.3d at 265. The court reiterated that rule here, Pet. App. 115a-116a, and in other cases as well. *See Fener v. Operating Eng'rs Constr. Indus. & Misc. Pension Fund (Local 66)*, 579 F.3d 401, 408-11 (5th Cir. 2009); *Alaska Elec. Pension Fund v. Flowserve Corp.*, 572 F.3d 221, 228-29 (5th Cir. 2009); *Luskin v. Intervoice-Brite Inc.*, 261 Fed. App'x 697, 698 (5th Cir. 2008). The district court well understood the Fifth Circuit requirement that at the class certification stage: "Plaintiffs in this case must demonstrate loss causation." Pet. App. 4a; 6a.

Defendants nonetheless suggest (Br. 9 n.2) that the Fifth Circuit uses the term "loss causation" as a "shorthand" for price distortion. They are wrong. As this Court explained in *Dura*, price distortion and loss causation are different: price distortion concerns the initial effect of a defendants material misstatements on a stock's price, i.e., whether it distorts the price (whether by increasing the price or, as in this case, maintaining a price level that would otherwise have dropped), while loss causation concerns the cause of a later decline in the stock's price following the revelation of the truth. *See Dura*, 544 U.S. at 342-43.

Moreover, the detailed analysis performed by the district court and the court of appeals in this case clearly was one concerning loss causation: for each set of alleged misstatements and corrective

disclosures, the courts asked whether the decline in the stock's price was "related to the false, non-confirmatory positive statement made earlier" and whether it is "more probable than not that it was this related corrective disclosure, and not any other unrelated negative statement, that caused the stock price decline." Pet. App. 119a-120a. This is an analysis of loss causation.

B. The Fifth Circuit Requirement to Prove Loss Causation Is Contrary to *Basic*

In *Basic*, this Court held that a plaintiff in a private securities fraud case may invoke a rebuttable presumption of reliance upon a showing that investors traded in an efficient market. *Basic*, 485 U.S. at 241-42, 247-48; *see also Matrixx Initiatives, Inc. v. Siracusano*, Case No. 09-1156, -- S. Ct. --, 2011 WL 977060 (Mar. 22, 2011); *Stoneridge Investment Partners LLC v. Scientific-Atlanta, Inc.*, 552 U.S. 148, 159 (2008). The Court did not require plaintiffs to prove loss causation to invoke the presumption. (Indeed, the Court did not even mention loss causation.) Rather, the Court explained that the fraud on the market theory is based on the "hypothesis" that in an efficient market, "the price of a company's stock is determined by the available material information regarding the company and its business. . . . Misleading statements will therefore defraud purchasers of stock even if the purchasers do not directly rely upon the misstatements." *Id.* at 241-42 (quoting *Peil v. Speiser*, 806 F.2d 1154, 1160-61 (3d Cir. 1986)); *see also id.* at 247 ("an investor's reliance

on any public material misrepresentation . . . may be *presumed*") (emphasis added). This presumption allows reliance to be presumed on a classwide basis, because each investor is presumed to rely on the material misstatements when he or she buys or sells at the market price. Accordingly, once a proposed plaintiff class invokes the presumption and supports its underlying assumption (an efficient market), the issue of reliance will turn on common proof, and class certification is appropriate.

Nothing in *Basic* supports requiring proof of loss causation on the merits at class certification. The Court said nothing about loss causation; the fraud on the market theory is a way to prove the separate element of *reliance*. And on the element of reliance, the Court stated that reliance could be *presumed* in an efficient market, not that it must be proven on the merits at class certification. By requiring proof of loss causation on the merits for class certification, the Fifth Circuit requires *proof* of what Basic allows courts to *presume*—and proof not of reliance, but of loss causation. *See Oscar,* 487 F.3d at 274 (Dennis J., dissenting) ("court is to presume that the defendants' material misstatement distorted the market price of the stock at issue"). Nothing in *Basic* allows the court of appeals to require plaintiffs to *prove* an element of their case at class certification, especially the fact-intensive, "rigorous" (Pet. App. 130a) element of loss causation.

Defendants argue (Br. 12, 27) that the Fifth Circuit's rule is permissible because *Basic* allows a defendant to rebut the fraud-on-the-market

presumption of reliance, and they should be allowed to do that at class certification. The first problem with defendants' argument is that rebuttal of the fraud-on-the-market theory is relevant at class certification only to the extent it relates to the question whether common questions of fact or law predominate. *See* Rule 23(b). If the defendants' proposed rebuttal would turn on common questions of fact or law, then class certification is appropriate, and the question whether the presumption actually is rebutted is one for a merits stage such as summary judgment or trial. *Basic* allows the plaintiff to establish a presumption of reliance by showing that defendant made public statements in an efficient market. *See Basic*, 485 U.S. at 241-42, 247-48. Defendants may contest the prerequisites for establishing the presumption at class certification—for example, by showing the market is inefficient. (Defendants here did not even attempt to do so. *See* Pet. App. 115a.) If plaintiff proves an efficient market, the classwide nature of reliance is presumed. Its existence or nonexistence is determined at trial.[1]

---

[1] Defendants claim (Br. at 38) that courts have "always understood" that the presumption established in *Affiliated Ute* is rebuttable at class certification. Although the court in *Ross v. Bank South, N.A.*, 837 F.2d 980, 990-91, 996-98 (11th Cir. 1988), the case defendants cite, considered rebuttal evidence of non-reliance under *Affiliated Ute* at the class certification stage, it considered evidence of the named plaintiffs' non-reliance to ascertain whether their claims were common and typical. No court of appeals has held that the presumption is rebuttable at class certification, and the case law suggests it is not. *See, e.g., Miera v. First Sec. Bank of Utah, N.A.*, 925 F.2d 1237, 1241 (10th Cir. 1991) (defendant rebutted *Affiliated Ute*'s presumption of reliance after bench trial); *Emrich v. Touche*

Defendants' contrary argument rests on an excerpt from *Basic*, which says the presumption of reliance may be rebutted by any "showing that severs the link between the alleged misrepresentation and . . . the price received (or paid) by the plaintiff." *Basic*, 485 U.S. at 248. However, the context of the Court's assertion makes clear that rebuttal takes place at trial, not at class certification. Rebuttal is reserved for trial because anything that severs the link—such as independent negative news about the company—is a classwide phenomenon, and hence not relevant to determining whether common issues predominate in the first place. Tellingly, footnote 29 says, when discussing one way to rebut the presumption of classwide reliance: "Proof of that sort is a matter for trial, throughout which the District Court retains the authority to amend the certification order as may be appropriate." *Id.* at 249 n. 29. Defendants suggest (Br. 39) that this footnote refers to the district court's ability to amend the certification order at trial *and* entertain rebuttal evidence at class certification. But that is not what the *Court* said;

Ross & Co., 914 F.2d 262 (9th Cir. 1990) (defendant rebutted *Affiliated Ute*'s presumption at summary judgment stage); *Sharp v. Coopers & Lybrand*, 649 F.2d 175, 189 (3d Cir. 1981) (defendant failed to rebut *Affiliated Ute*'s presumption at jury trial), *overruled in part on other grounds*, *In re Data Access Sys. Sec. Litig.*, 843 F.2d 1537, 1550 (3d Cir. 1988); *Blackie v. Barrack*, 524 F.2d 891, 905–06 & n.22 (9th Cir. 1975) (affirming class certification and noting in dicta that the right of rebuttal does not defeat class certification, stating: "The right of rebuttal, however, does not preclude the predominance of common questions.").

the footnote addresses only trial, not class certification.

Second, defendants did not attempt to rebut the existence of an efficient market; they argued the common question of whether in an efficient market there was loss causation and the Fifth Circuit did not limit the plaintiff's burden to the element of reliance. Instead, it required a showing on the *different* element of loss causation. Even if defendants were permitted to rebut the presumption of reliance by affirmative proof that particular plaintiffs did not rely on the market price (an individual issue that could be relevant to the requirement of predominance), there is no relevance at the class certification of a common issue such as loss causation (unless it is to confirm predominance).

Third, the Fifth Circuit did not simply allow defendants to make a rebuttal showing. It placed the burden on the *plaintiff*, even if the defendant makes no showing whatsoever. Defendants do not attempt to justify this burden-shifting.[2]

---

[2] This case provides no occasion to reconsider this Court's holding in *Basic*. By the time this Court issued its opinion in *Basic*, all eight circuit courts that had considered the issue had adopted the fraud-on-the-market presumption of reliance. Petitioner's Brief 4. The courts have applied the holding in *Basic* for more than two decades, and no court of appeals has suggested that *Basic* should be abandoned. Congress has not seen fit to change the fraud-on-the-market presumption even though Congress has been very active in passing legislation governing private securities actions. The fraud-on-the-market presumption makes commonsense, as this Court noted, *see Basic*, 485 U.S. at 246, and reflects the fundamental principles underlying the securities laws. *See* Brief Of Public Justice As

C. Proof of Loss Causation Requires a Merits Inquiry Not Tied To Rule 23

The Fifth Circuit did not base its rule that class certification requires proof of loss causation on any of the requirements in Rule 23. Instead, it adopted the rule because, in its view, "a district court's certification order often bestows upon plaintiffs extraordinary leverage, and its bite should dictate the process that precedes it." *Oscar*, 487 F.3d at 267. Significantly, the court never suggested that common issues would not predominate on the element of loss causation. *See* Brief of Law Professors As Amicus Curiae In Support of Petitioner ("Professors Br."), at 9-10. Indeed, defendants have conceded that "loss causation stands or falls on a classwide basis". Resp. Supp. Br. In Opp. 9. That should have ended the matter.

But the Fifth Circuit nonetheless decided to require a "rigorous" (Pet App 130a) "merit inquiry" (*Oscar*, 487 F.3d at 267) as a prerequisite for class certification (Pet. App. 113a, 115a). The Fifth

---

Amicus Curiae In Support Of Petitioner ("Public Justice Br.") 8-16, 21-25. Notably, defendants did "not dispute the efficiency of the market" in this case, *see* Pet. App. at 115a, which itself makes irrelevant any debates about the possibility of market anomalies—theoretical debates that in any event do not detract from the widespread view among finance academics that U.S. markets for public securities efficiently incorporate information. *See* Brief Of Financial Economists As Amici Curiae In Support Of Petitioner 10-11; Public Justice Br. 28-29. Moreover, the criticisms of the efficient market hypothesis began before the decision in *Basic* was issued and were known to the Court at the time it issued its decision. *See* Public Justice Br.19-21, 26-28.

Circuit is not authorized to impose requirements above and beyond those specified in Rule 23. This court has made clear that courts "are not free to alter" Rule 23's requirements. *Ortiz v. Fibreboard Corp.*, 527 U.S. 815, 861 (1999); *see Amchem Prods., Inc. v. Windsor*, 521 U.S. 591, 620 (1997). Any concerns about abusive or meritless class actions are for Congress to address. And Congress has been very active in this area. For example, Congress has facilitated the use of motions to dismiss to weed out nonmeritorious private securities-fraud cases by imposing heightened pleading requirements, 15 U.S.C. 78u-4(b)(1)-(2); and by requiring an automatic stay of discovery pending resolution of a motion to dismiss, 15 U.S.C. 78u-4(b)(3)(B). Further, Congress has specifically addressed class actions by, for example, establishing procedures for the appointment of lead plaintiffs and lead counsel, 15 U.S.C. 78u-4(a)(3). Congress's recent and repeated efforts to adjust the standards for private securities-fraud suits particularly illustrate why the Fifth Circuit erred in making "likely success on the merits essential to class certification in securities-fraud suits." *Schleicher*, 618 F.3d at 686.

Defendants suggest (Br 6-7, 10, 23, 25) that it is appropriate to require plaintiffs to prove loss causation in cases where the plaintiffs allege that there was no initial price increase when the material misstatements were made, but there was a stock price decrease when the corrective disclosures were issued. As an initial matter, that is not the Fifth Circuit's rule; the Fifth Circuit requires *all* plaintiffs who allege that they will establish reliance using the

fraud-on-the-market theory to prove loss causation to obtain class certification. *See Oscar*, 487 F.3d at 265, 276 n.3. In any event, the proposed rule cannot be justified under Rule 23 and *Basic*. *Basic* allows plaintiffs to invoke a presumption of reliance, and because of that presumption common issues will predominate on the element of reliance and class consideration of the claims is appropriate. Countless securities lawsuits allege, like this one, that defendants' misrepresentations concealed negative information, and thus kept the stock price from falling. *See* Br. of Financial Economists As Amici Curiae In Support of Petitioner at 28-29, 31 (providing examples of material misrepresentations that do not cause the stock price to rise). In that situation, the defendant's material misrepresentation has still distorted the stock's price, even though the price did not increase. And *Basic* allows courts to *presume* that distortion in stock price; it does not require plaintiffs to prove it at class certification. *See Schleicher*, 618 F.3d at 687.

Defendants argue (Br. 31-35) that the courts below did not improperly reach the merits of plaintiff's claims, but instead simply required plaintiff to show that reliance was a common issue by proving that the representations "distorted the market price." But if a plaintiff cannot demonstrate loss causation, that does not mean that loss causation is an individualized issue; it means that plaintiffs as a class cannot establish an element of their case. Loss causation is not a class certification requirement that happens to overlap with the

merits; rather, it is a merits issue that applies equally to the lead plaintiff and all absentee class members; and because it raises a common issue of proof, it cannot be a basis under Rule 23 of defeating class certification. *See* Br. for U.S. 19 n.2

While the Fifth Circuit candidly admits it requires plaintiffs to prove loss causation and imposes on them the burden of doing so, defendants repeatedly use linguistic formulations (e.g. the "evidence shows") that elide whether plaintiffs bear that burden of demonstrating loss causation or defendants may rebut the presumption by showing an absence of loss causation. *See, e.g.*, Br. 2, 11, 13, 14, 16, 23, 43, 50, 51. Moreover, both formulations are wrong because they entail a merits inquiry that is not linked to the requirements of Rule 23 and therefore should be reserved for trial.[3]

Defendants argue that Federal Rule of Evidence 301 means that they only need to produce enough evidence so that "a reasonable fact-finder could believe that the 'link' between the alleged misrepresentation and the price has been 'sever[ed]'"

---

[3] Defendants quarrel with the Fund's citation to the Advisory Committee Notes to Rule 301. (Br. 20.) The Court cited to these very same Committee Notes. *See Basic*, 485 U.S. at 245 (stating "see also FED. R. EVID. 301 and Advisory Committee Notes, 28 U.S.C. App., p. 685."). And the proposition for which the Notes have been cited cannot be disputed. While Congress ultimately adopted the Senate, not the House, version of Rule 301, the difference concerned the continuing effect of the presumption, not the quantum of evidence required to rebut it. *See Sheridan v. El DuPont de Nemours and Co.*, 100 F.3d 1061, 1080 (3d Cir. 1996) (Alito J. concurring and dissenting) (tracing history of Rule 301).

(Br. 21). Evidence that the link *might* have been severed and thus that the misrepresentation *might* not have affected the price is not the same as evidence that in fact "severs the link" and shows that the misrepresentation in fact did not impact the price. And it is this latter showing which *Basic* requires of defendants "to rebut or meet the presumption." *Basic*, 485 U.S. at 248.

Moreover, whether the link has been severed is a merits determination regarding whether plaintiffs ultimately met their burden of proof on an element of their claim; it is not a question of predominance for class certification.

D. The Fifth Circuit Rule Requires Mini-Trials at Class Certification, Denying Plaintiffs Full Discovery And Preempting The Jury's Fact Finding

The Fifth Circuit's rule regarding loss causation converts Rule 23 proceedings into mini-trials on the merits under the wrong standard of proof and without merits discovery.

Here, the district court held a mini-trial on the merits, preempting the merits inquiries that should be undertaken at summary judgment or at trial, including ruling on issues not relevant to determining whether common issues predominate under Rule 23—and did so under a preponderance of the evidence standard. *Cf. Schleicher*, 618 F.3d at 683.

The Fifth Circuit suggested that loss causation can be demonstrated at class certification because proof of loss causation requires little, if any, discovery. *See Oscar*, 487 F.3d at 267. That is not correct. Under this Court's holding in *Dura*, which discussed loss causation as a proximate cause issue, merits discovery and a trial (or summary judgment) is necessary because proximate cause is fact intensive, and requires complete discovery. *See* Pet. Br. 52-56; Brief of 16 Public Pension Funds As Amici Curiae In Support of Petitioner 5 n.3. Elements of loss causation requiring such discovery and proof on the merits include the causal relationship between the alleged corrective disclosure and the prior misrepresentation, whether the truth leaked out in the interim, and whether the stock drop was a reasonably foreseeable result of the prior misstatement. Even if some or all of these issues could, in some cases, be resolved with limited discovery, there is no reason why they should be resolved at class certification. Because the Rule 23 hearing operates under a higher standard of proof than summary judgment does, a merits inquiry at class certification preempts the merits inquiries that should occur at summary judgment or at trial. Indeed, under the Fifth Circuit's rule, even members of a proposed plaintiff class that could survive summary judgment on the issue of loss causation, and who therefore are entitled to have their claims resolved by a jury, would not be able to obtain class certification.

E. The Fifth Circuit Applies A Flawed Loss Causation Test, Aggravating The Prejudice To Plaintiffs

The Fifth Circuit's loss causation test effectively requires that plaintiffs prove scienter through a corrective disclosure that admits wrongdoing, *see, e.g.*, Pet. App. 121a ("corrective disclosure" must show "the misleading or deceptive nature of the prior positive statements"). That is why the Fifth Circuit claims that loss causation can be decided on material in the public record. *See Oscar*, 487 F.3d at 267 ("Its 'proof' is drawn from public data and public filings"). The district court and court of appeals in this case repeatedly held that plaintiff failed to prove loss causation because the corrective admissions did not themselves reveal scienter. *See, e.g.*, Pet. App. 122a ("When confronted with allegedly false financial predictions and estimates, the district court must decide whether the corrective disclosure more probably than not shows that the original estimates or predictions were designed to defraud."); *id.* 122a ("the truth revealed by the corrective disclosure must show that the defendant more likely than not misled or deceived the market with earnings misstatements that inflated the stock price and are actionable"); *id.* 126a (did not show "prior reserve estimates were intentionally misleading"); *id.* 126a-27a ("we can discern no indication from the June 28, 2001 press release that Halliburton's prior asbestos reserve estimates were misleading or deceptive"); *id.* 129a ("undermines any conclusion . . . the company acted with deception"); *id* 132a ("Plaintiff fails to show these announcements . . . revealed deceptive

practices in Halliburton's accounting assumptions."); *see also* Pet. 25 n.20.

Under the Fifth Circuit's flawed test of loss causation, defendants can defeat loss causation by wording their corrective disclosure so that on their face they do not appear related to the prior misrepresentations, or by avoiding a corrective disclosure altogether. Defendants argue, for instance, that Halliburton's June 28, 2001 announcement that it would need to increase its asbestos reserves by $50 to $60 million because of Harbison-Walker's request for assistance was not a corrective disclosure because it "simply revealed new information." Br. 50. Plaintiff, however, claimed that Halliburton knew throughout the class period that Harbison-Walker would need financial assistance, USCA5 4576 (at ¶ 38); Halliburton, through Dresser, was insured on the same policies as Harbison-Walker and so was privy to information regarding Harbison-Walker's demands on their common lines of insurance. USCA5 4622 (at ¶ 241). Thus, plaintiff needs merits discovery to find out when Halliburton first learned about Harbison-Walker's mounting asbestos exposure and increased financial difficulties, including as reflected by claims on their shared insurance. [4]

---

[4] Defendants claim that plaintiff here enjoyed "extensive discovery" during the five years between the filing of its complaint and moving for class certification. Br. 6, 44. That is not correct. First, plaintiff was not permitted discovery until surviving a motion to dismiss years after the original complaint was filed. Second, the majority of the production was composed of documents produced to the SEC regarding Halliburton's

The Fifth Circuit held that defendants' disclosure that it would increase its asbestos reserves to include 165,000 claims against Harbison-Walker did not constitute a corrective disclosure because defendants' statement did not indicate that Halliburton previously knew but failed to disclose that Harbison-Walker would need financial assistance, Pet. App. 124a-125a, and because raising reserves "does not show those prior reserve estimates were intentionally misleading." Pet. App. 126a. Unless the Court is willing to permit defendants to immunize themselves by the wording of their public statements, plaintiffs should be permitted to establish loss causation by establishing through merits discovery and at trial (or summary judgment) what defendants knew and when they knew it. Similarly, the Fifth Circuit found that an adverse asbestos verdict that caused Halliburton's stock price to plummet 42.7% did not constitute a corrective disclosure because "the district court must decide whether the corrective disclosure more probably than not shows that the original estimates or predictions were designed to defraud." Pet. App. 122a.[5] But the only way for the plaintiff to rebut

---

accounting practices only, and then for only part of the class period.

[5] The Fifth Circuit also cited boilerplate disclosures in Halliburton's SEC filings about litigation risks but acknowledged that such "cautionary language" is not "dispositive" and is "relevant to materiality." Pet. App. 128a. The adequacy of allegations of materiality are resolved on a motion to dismiss, *Lormand v. US Unwired, Inc.*, 565 F.3d 228,

such an argument is by showing scienter (that the company anticipated the high expected liability and deliberately chose to misrepresent it), which is a common issue requiring merits discovery and a trial (or summary judgment decision).[6]

Defendants claimed at the petition stage that the Fifth Circuit rule eliminates only meritless cases. *See* Supp. Br. In Opp. 5 (only question is "whether certain meritless class actions should be certified"). Defendants' contention is based on the unfounded assumption that a case is meritless if a plaintiff cannot meet the Fifth Circuit's excessively strict test for loss causation. Because the Fifth Circuit applied the wrong test at the wrong time under the wrong standard of proof, failure to satisfy the Fifth Circuit test indicates nothing about whether a claim is meritorious. In any event, because the issue of loss causation is a merits issue

---

244-48 (5th Cir. 2009); *Rosenzweig v. Azurix Corp.*, 332 F.3d 854, 869-70 (5th Cir. 2003).

[6] Plaintiff also needs discovery to establish loss causation for their accounting claims. For instance, the Fifth Circuit held that plaintiff had not established loss causation for Halliburton's October 24, 2000 announcement that it would undertake a massive restructuring of its construction business because the "press release does not mention fixed price contracts, unapproved claims or the methods for recognition of revenue from such claims." Pet. App. 132a-133a. With discovery, plaintiff could seek evidence to demonstrate that the restructuring was made to correct problems with Halliburton's cost overruns on long-term, fixed-price contracts. For other examples of why discovery is necessary to show loss causation, *see* Professors Br. at 27-29.

common to the class, it was wrong to use it to deny class certification under Rule 23.

II. CONCLUSION

For the reasons stated here and in plaintiff's opening brief, the opinion of the Fifth Circuit should be reversed and this case remanded for entry of an order certifying the class.

Respectfully submitted,

RESPONDENTS' SUPPLEMENTAL BRIEF

The Government contends that the court of appeals erred by considering loss causation at the class-certification stage of a Rule 10b-5 case. But it was this Court in *Basic Inc.* v. *Levinson*, 485 U.S. 224, 247 (1988) that created a presumption of reliance "on the integrity of the market price" for the express purpose of class certification. And it was *Basic* that held that a defendant could rebut the presumption with "[a]ny showing that severs the link between the alleged misrepresentation and . . . the price received (or paid) by the plaintiff." *Id.* at 248. Under those principles, when the evidence shows

that a misrepresentation had no impact on the market price—and thus did not cause any loss—a court may refuse to certify a class under the fraud-on-the-market theory. The Government's position violates these principles and serves no purpose other than to certify cases that are, by definition, meritless. The *in terrorem* power of class certification under the fraud-on-the-market theory should not be deployed when the market price itself reveals that no fraud has occurred.

The Government compounds its misinterpretation of *Basic* by overselling the differences among the only three circuits to have addressed this issue. The Second Circuit joins the Fifth Circuit in considering loss causation at the class-certification stage. And the Seventh Circuit simply has not addressed whether a defendant can rebut the *Basic* presumption—and thus defeat class certification—by demonstrating the absence of loss causation. Certiorari should be denied.

I. NO DIVISION OF AUTHORITY WARRANTS REVIEW

The Government asserts that three circuits take three different positions on whether loss causation is relevant to class certification. U.S. Br. 18-21. Any disagreement is not nearly as meaningful as the Government contends and is not implicated by the facts of this case.

The Second Circuit's decision in *In re Salomon Analyst Metromedia Litigation*, 544 F.3d 474 (2008) differs from the Fifth Circuit's approach only with respect to which party bears the initial burden to establish that the alleged misrepresentation distorted the price of the stock. See BIO 7-11; compare Pet. App. 115 (holding that plaintiff must show that the alleged misrepresentations "actually moved the market") with *Salomon*, 544 F.3d at 484 ("defendants are allowed to rebut the presumption . . . by showing . . . the absence of a price impact"). In both circuits, a class may not be certified if loss causation is not proven by a

preponderance of the evidence. BIO 9-10; *Salomon*, 544 F.3d at 484-485.

The Government argues that the Second Circuit does not consider loss causation when it allows a defendant to defeat class certification by showing that the misrepresentation did not distort the market price. U.S. Br. 20 n.2. To the contrary: a defendant who proves that a misrepresentation did not impact market price necessarily proves that the misrepresentation did not cause plaintiff's loss. *Dura Pharms., Inc.* v. *Broudo*, 544 U.S. 336, 343 (2005). And *Salomon* directed the district court on remand to consider, *inter alia*, whether "other statements in the sea of voices of market commentary were responsible for price discrepancies," instead of the alleged misrepresentation. 544 F.3d at 485.[1] That type of inquiry is at the heart of loss causation. *Dura*, 544 U.S. at 343, 344-345.

In any event, the Government does not dispute Halliburton's showing that this case would be decided the same way in either the Second or Fifth circuit, given the extensive record evidence that Halliburton's alleged misrepresentations had no impact on its stock price. See BIO 16-22. The Government's implicit concession demonstrates that any procedural differences between the circuits are immaterial here.

Nor is it clear that the Fund's class could be certified in the Seventh Circuit. Although that court recently held that "*plaintiffs* need not establish loss causation" in order to invoke the *Basic* presumption of reliance, *Schleicher* v. *Wendt*, 618 F.3d 679, 687 (7th Cir. 2010) (emphasis added), the defendant in *Schleicher* did not

---

[1] See also *In re Flag Telecom Holdings, Ltd. Sec. Litig.*, 574 F.3d 29, 41 (2d Cir. 2009) ("Plaintiffs have not put forth sufficient evidence on which the in-and-out traders could establish loss causation, and they must therefore be excluded from the certified class.")

attempt to rebut the fraud-on-the-market presumption. *Id.* at 684. Thus, *Schleicher* did not even mention *Basic*'s holding that a defendant may "rebut the presumption" with "[a]ny showing that severs the link between the alleged misrepresentation and . . . the price received (or paid) by the plaintiff." *Basic*, 485 U.S. at 248. Nor did it consider *Salomon*'s holding that a defendant who rebuts the *Basic* presumption defeats class certification. Consequently, it remains an open question in the Seventh Circuit whether a defendant may defeat class certification by showing that the alleged misrepresentation did not cause plaintiff's loss. See Michelle D. Johnson et al., Schleicher v. Wendt *and Fraud-on-the-Market Doctrine*, Law360 (Oct. 25, 2010), *available at* www.law360.com/web/articles/204036 ("[t]he Seventh Circuit's silence on the Second Circuit's *Salomon* approach leaves room for further development of Section 10(b) class certification standards").

At the very least, it is uncertain whether any circuit would certify a class where, as here, the evidence indisputably shows that the alleged misrepresentations did not cause any loss, thus "sever[ing] the link between the alleged misrepresentation and . . . the price received (or paid) by the plaintiff." *Basic*, 485 U.S. at 248. Because there is no clear division of authority implicated by the facts of this case, certiorari is not warranted.

At most, there is a recently created and exceedingly shallow split. Time will reveal whether the Seventh Circuit's position is as extreme as the Government believes, or whether that court will allow defendants to defeat class certification by proving that the alleged misrepresentation did not distort market price. If a meaningful divergence arises among the circuits, this Court will have ample opportunity to offer guidance with the benefit of additional analysis by the courts of appeals.

Tolerance of minor intercircuit differences is commended not only because they are not clearly implicated here, but also by *Basic* itself. The Government does not contest that this Court gave lower courts leeway to implement the fraud-on-the-market presumption. See BIO 15-16 (collecting authorities). And there is no great doctrinal dispute here; only the procedural question whether certain meritless class actions should be certified. That circuits have accepted this Court's invitation to develop their own fraud-on-the-market procedures is no reason to grant review, especially in the absence of a significant and well-developed division of authority.

II. The Decision Below Is Consistent With This Court's Precedents And Rule 23

Basic's fraud-on-the-market presumption is founded on the belief that an efficient market reflects all "public material misrepresentations" and that "[a]n investor who buys or sells stock at the price set by the market does so in reliance on the integrity of that price." 485 U.S. at 247. *Basic* thereby allows certification of classes that otherwise could not be certified because individual proof of reliance on the alleged misrepresentations would be required. *Id.* at 242. In exchange for this presumption of reliance on defendant's misrepresentations (via the market price), *Basic* requires assurances that the market price was actually affected by the alleged misrepresentations. *Id.* at 248. Without such evidence, "the causal connection" between the misrepresentation and the plaintiff's reliance "[w]ould be broken" because "the basis for finding that the fraud had been transmitted through market price would be gone." *Ibid.* Thus, *Basic* allows defendants to "rebut the presumption of reliance" with "[a]ny showing that severs the link between the alleged misrepresentation and . . . the price received (or paid) by the plaintiff." *Ibid.* In other words, if the record

shows that the alleged misrepresentation did not distort the market price—and thus did not cause any loss—then a class cannot be certified based upon the fraud-on-the-market presumption.

A. Loss Causation Is Central To The Fraud-On-The-Market Presumption

The Government strains to avoid this straightforward reading of *Basic*. It contends that the absence of loss causation does not rebut the presumption of reliance because "reliance and loss causation are distinct elements of a securities-fraud claim." U.S. Br. 16. That is a non sequitur. While reliance (or transaction causation) and loss causation are distinct elements of a 10(b) claim, *Basic* holds that the absence of *either one* of these elements destroys the fraud-on-the-market presumption. Specifically, *Basic* allows defendants to rebut the presumption by "show[ing] that the misrepresentation in fact did not lead to a distortion of price *or* that an individual plaintiff traded or would have traded despite his knowing the statement was false." 485 U.S. at 248 (emphasis added).

The next sentence in *Basic* drives this point home: a defendant "rebut[s] the presumption" of reliance with "[a]ny showing that severs the link between the alleged misrepresentation and *either* [1] the price received (or paid) by the plaintiff, *or* [2] his decision to trade at a fair market price." *Ibid.* (bracketed numbers and emphases added). The second part of this sentence clearly refers to transaction causation—whether the misrepresentation caused the plaintiff to purchase the stock. But the first part of the sentence just as clearly refers to loss causation—whether the misrepresentation caused the plaintiff to pay too much for the stock. This Court well understood that loss causation and reliance are different, but it "explicitly set up the presumption so that defendants could rebut it by disproving either loss

causation or reliance." Jeffrey L. Oldham, *Taking "Efficient Markets" Out of the Fraud-on-the-Market Doctrine After the Private Securities Litigation Reform Act*, 97 NW. U. L. REV. 995, 997 (2003). And that makes perfect sense: there is no basis for presuming that the entire class relied upon alleged misrepresentations via the market price if the evidence shows that the misrepresentation did not in fact distort that price.

As a fallback, the Government argues that even if "market distortion" can be considered under *Basic*, loss causation cannot. U.S. Br. 16-17. There may be a theoretical difference between price distortion and loss causation. *Dura*, 544 U.S. at 342-343. But when it comes to determining whether the evidence shows that the misrepresentation disorted the market price, as *Basic* requires, the inquiries converge. A court assessing whether a misrepresentation affected market price would first look to see whether prices rose shortly after the misrepresentation. Cf. *id.* at 343 (noting that price inflation "may prove to be a necessary condition" of loss causation). If such proof is lacking (as here), the court would then look to see whether prices declined after the truth of the alleged misrepresentation was revealed. Cf. *id.* at 344-345, 347 (setting forth identical test for loss causation). If neither finding can be made, "the misrepresentation in fact did not lead to a distortion of price" and the defendant has "rebut[ted] the presumption of reliance." *Basic*, 485 U.S. at 248. Likewise, if the evidence shows that something other than the misrepresentation caused either the initial price inflation or the later price decline, the defendant has "sever[ed] the link between the alleged misrepresentation and . . . the price received (or paid) by the plaintiff." *Ibid.* Loss-causation evidence is therefore directly relevant to class certification under the fraud-on-the-market theory.

B. Loss Causation Is Appropriately Considered At Class Certification

The Government next argues that the court of appeals erred "by considering loss causation at the class-certification stage without determining that it was relevant to any of the prerequisites for class certification under Federal Rule of Civil Procedure 23." U.S. Br. 5, 6-10. That has it exactly backwards. *Basic* created an artificial construct to allow plaintiffs to overcome the otherwise insuperable Rule 23(b)(3) hurdle of proving reliance on a classwide basis. 485 U.S. at 242. But *Basic* recognized that if an alleged misrepresentation does not affect market price, then the presumption falls away, with the logical consequence that plaintiffs cannot satisfy Rule 23(b)(3)'s predominance requirement. *Id.* at 248; *Salomon*, 544 F.3d at 485 (a "successful rebuttal *defeats* certification by defeating the Rule 23(b)(3) predominance requirement"). The court of appeals thus correctly considered loss causation to determine whether plaintiffs could invoke the fraud-on-the-market presumption and thereby satisfy Rule 23(b)(3).[2]

Conceding the obvious, the Government admits that "the fraud-on-the-market theory is relevant to the district court's class-certification decision." U.S. Br. 8. But it argues that in order to invoke the fraud-on-the-market presumption the plaintiff need only show that the misrepresentations were made publicly, that the stock traded in an efficient market, and that the plaintiff traded shares between the time of the misrepresentation

---

[2] The Government's related complaint that the court of appeals improperly considered "the merits" at the class-certification stage rings hollow for the same reason. U.S. Br. 10-11. The Government correctly acknowledges that courts may consider merits issues to the extent they overlap with Rule 23 requirements. *Id.* at 10. As explained above, loss causation is just such an issue here.

and the revelation of the truth. *Id.* at 9. The Government asserts that this showing is relevant to class certification because it establishes "that common questions predominate on the question of reliance." *Ibid.* By contrast, the Government believes that the *classwide* absence of proof with respect to loss causation is irrelevant to whether a class can be certified under *Basic*. *Id.* at 9-10, 14-15.

The Government's dichotomy is directly contrary to *Basic*. The Court explained that a defendant may rebut the presumption by "show[ing] that the misrepresentation in fact did not lead to a distortion of price." *Basic*, 485 U.S. at 248. Such proof would both preclude class certification by rebutting the fraud-on-the-market presumption and defeat loss causation on a classwide basis. This makes sense: if an alleged misrepresentation did not affect market price, "the causal connection" between the misrepresentation and plaintiff's reliance "[w]ould be broken" because "the basis for finding that the fraud had been transmitted through market price would be gone." *Ibid.* The fact that loss causation stands or falls on a classwide basis hardly makes it less relevant to whether a plaintiff may invoke the fraud-on-the-market presumption and thereby achieve class certification.

The Government next contends that it is wrong to require plaintiffs to prove loss causation at the class-certification stage by preponderance of the evidence. U.S. Br. 12-13. But even if the plaintiff does not have the *initial* burden to prove loss causation in order to invoke the presumption of reliance, *Basic* provides that defendants can "rebut the presumption" with "[a]ny showing that severs the link between the alleged misrepresentation and . . . the price received (or paid) by the plaintiff." 485 U.S. at 248. *Basic*'s creation of a rebuttable presumption in favor of plaintiffs "does not

shift to [the defendant] the burden of proof." Fed. R. Evid. 301 (cited in *Basic*, 485 U.S. at 245). Thus, once the defendant makes its rebuttal showing, the ultimate burden of proof would remain on the plaintiff to show that he can satisfy Rule 23's requirements by a preponderance of the evidence. See *ibid.*[3]

The Government urges that defendant's rebuttal evidence may only be considered at trial. U.S. Br. 16, 20 n.3. That cannot be the case. *Basic* created a *rebuttable* presumption to assist plaintiffs in overcoming the predominance hurdle of Rule 23(b)(3). Thus, a "successful rebuttal *defeats* certification by defeating the Rule 23(b)(3) predominance requirement." *Salomon*, 544 F.3d at 485 (citing *Basic*, 485 U.S. at 249 n.29). It would be incongruous to allow plaintiffs to achieve class certification based upon a minimal showing—immediately imposing huge *in terrorem* costs upon defendants—while requiring defendants to wait until trial to prove that the class should not have been certified in the first place.

The Government worries that expert testimony and event studies may be necessary to prove loss causation at the class-certification stage. U.S. Br. 11-12. But that is no less true of proving market efficiency, which all parties agree must be proven in order to invoke the presumption. In fact, the event studies used to show market efficiency are often proffered to show loss causation as well. See, *e.g.*, William O. Fisher, *Does the Efficient Market Theory Help Us Do Justice in a Time*

---

[3] The Government does not dispute that plaintiffs must satisfy Rule 23's requirements by preponderance of the evidence. Since the fraud-on-the-market theory is the usual way Section 10(b) plaintiffs achieve class certification, courts must weigh evidence and determine whether plaintiffs have the right to invoke that theory. *E.g.*, *Salomon*, 544 F.3d at 484.

of Madness?, 54 EMORY L.J. 843, 871, 878 (2005). In this very case, the Fund used the same event study to address both market efficiency and loss causation. Under the Government's view, the courts below were apparently required to accept the event study's proof of market efficiency, but ignore that the event study revealed a total absence of loss causation.

The alleged need for discovery is similarly a red herring. See U.S. Br. 12. Loss causation is proven by public documents, *Oscar Private Equity Invs.* v. *Allegiance Telecom, Inc.*, 487 F.3d 261, 267 (5th Cir. 2007), and the Fund has never identified any discovery that was necessary to prove loss causation here. Finally, determining loss causation by a preponderance of the evidence at the class-certification stage is not inconsistent with either summary judgment or jury-trial principles. See U.S. Br. 13-14. *Basic*'s unique presumption requires consideration of certain issues at the class-certification stage, such as materiality, market efficiency, and loss causation. The need for a district judge to make findings on these issues in order to assess whether a plaintiff can satisfy Rule 23 does not preclude a jury from reaching a different conclusion to the extent they are also relevant to the merits. *Alaska Elec. Pension Fund* v. *Flowserve Corp.*, 572 F.3d 221, 229 (5th Cir. 2009) (per curiam; panel including O'Connor, J).

In sum, the court of appeals' reasoning is consistent with *Basic*. The Government's approach, by contrast, would allow class certification through the fraud-on-the-market theory even where the evidence shows that no "fraud had been transmitted through [the] market price." *Basic*, 485 U.S. at 248.

CONCLUSION

The petition for certiorari should be denied.

Respectfully submitted.

v.

HALLIBURTON CO., ET AL.

ON WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE FIFTH CIRCUIT

BRIEF FOR THE UNITED STATES AS AMICUS CURIAE SUPPORTING PETITIONER

INTEREST OF THE UNITED STATES

The United States, through the Department of Justice and the Securities and Exchange Commission (SEC), administers and enforces the federal securities laws. The question in this case is whether, in a private securities-fraud class action in which plaintiffs invoke the fraud-on-the-market theory to establish a presumption of reliance, plaintiffs must prove loss causation in order to obtain class certification. Because meritorious private securities-fraud actions are an essential supplement to criminal prosecutions and civil enforcement actions brought by the Department of Justice and the SEC, the United States has a substantial interest in this

Court's resolution of the question presented. At the Court's invitation, the United States filed a brief at the petition stage of this case.

STATEMENT

1. Section 10(b) of the Securities Exchange Act of 1934 makes it unlawful for any person "[t]o use or employ, in connection with the purchase or sale of any security * * *, any manipulative or deceptive device or contrivance in contravention of" rules promulgated by the SEC. 15 U.S.C. 78j(b). The SEC's Rule 10b-5 implements Section 10(b). As relevant here, the Rule makes it unlawful for any person, in connection with the purchase or sale of a security, "[t]o make any untrue statement of a material fact or to omit to state a material fact necessary in order to make the statements made, in the light of the circumstances under which they were made, not misleading." 17 C.F.R. 240.10b-5(b).

This Court has construed Section 10(b) to provide a private right of action. See *Dura Pharms., Inc.* v. *Broudo*, 544 U.S. 336, 341 (2005) (citing cases). In order to recover in a private action under Section 10(b) and Rule 10b-5(b), a plaintiff must prove the following elements: (1) a material misrepresentation or omission by the defendant; (2) that the defendant acted with scienter; (3) a connection between the misrepresentation or omission and the purchase or sale of a security; (4) the plaintiff's reliance upon the misrepresentation or omission; (5) economic loss; and (6) loss causation, meaning that the defendant's misrepresentation or omission proximately caused the plaintiff's loss. *Id.* at 341-342; see, *e.g.*, *Stoneridge Inv. Partners, LLC* v. *Scientific-Atlanta, Inc.*, 552 U.S. 148, 157 (2008).

In *Basic Inc.* v. *Levinson*, 485 U.S. 224 (1988), this Court addressed the manner in which plaintiffs in a private securities-fraud suit could prove reliance through evidence common among members of the class, thereby allowing class certification under Federal Rule of Civil Procedure 23. 485 U.S. at 241-248. The Court recognized that "[r]equiring proof of individualized reliance from each member of the proposed plaintiff class" often would "prevent[] [plaintiffs] from proceeding with a class action, since individual issues then would * * * overwhelm[] the common ones." *Id.* at 242. The Court held that plaintiffs may overcome that obstacle by invoking a rebuttable presumption of reliance based on the fraud-on-the-market theory. *Id.* at 242-247.

Under that theory, the Court explained, "the market price of shares traded on well-developed markets reflects all publicly available information," including "any public material misrepresentations," and "[a]n investor who buys or sells stock at the price set by the market does so in reliance on the integrity of that price." *Basic*, 485 U.S. at 246-247. Because public material misrepresentations in an efficient market are reflected in the stock's price, "an investor's reliance on any public material misrepresentations * * * may be presumed for purposes of a Rule 10b-5 action." *Id.* at 247. And because evidence regarding the applicability of that presumption will generally be common to all members of a properly defined class, the case may proceed as a class action. *Id.* at 242, 248. The Court noted that a defendant may rebut the presumption of reliance through "[a]ny showing that severs the link between the alleged misrepresentation and either the price received (or paid) by the plaintiff, or his decision to trade at a fair market price." *Id.* at 248. After explaining one way in which the

fraud-on-the-market presumption might be rebutted, the Court noted that "[p]roof of that sort is a matter for trial." *Id.* at 249 n.29.

2. Petitioner is the lead plaintiff in a putative securities-fraud class action against Halliburton Co. and one of its officers (respondents in this Court). Pet. App. 113a-114a. Petitioner alleges that respondents attempted to inflate Halliburton's stock price by downplaying the company's estimated asbestos liabilities, overstating the revenue in its engineering and construction business, and overstating the benefits of its merger with Dresser Industries. *Id.* at 4a-5a, 11a. Petitioner further alleges that, after it purchased stock in Halliburton, respondents made corrective disclosures about these matters that caused Halliburton's stock price to decline. *Id.* at 5a, 11a.

Petitioner sought to certify a class of all persons who had purchased Halliburton common stock between June 3, 1999, and December 7, 2001. See Pet. App. 4a, 66a-67a. The district court denied the class certification motion. *Id.* at 3a-55a. The court determined that "the Proposed Class satisfie[d] Federal Rule of Civil Procedure 23 as to numerosity, commonality, typicality, and adequacy of [petitioner] as a class representative," and that a class action generally "would be the superior method for adjudicating the claims of these class members." *Id.* at 3a-4a; see *id.* at 54a. The court held, however, that it could not certify the class because petitioner had failed to prove loss causation. *Id.* at 4a.

The district court explained that the Fifth Circuit had recently "tightened" the requirements for class certification by requiring "[p]laintiffs * * * [to] demonstrate loss causation in order to trigger the fraud-on-the-market presumption of class reliance." Pet. App. 6a

(citing *Oscar Private Equity Invs.* v. *Allegiance Telecom, Inc.*, 487 F.3d 261, 265 (2007) (*Oscar*)). Under the Fifth Circuit's decision in *Oscar*, the court observed, loss causation must be "established at the class certification stage by a preponderance of all admissible evidence." *Ibid.* (quoting *Oscar*, 487 F.3d at 269). The district court then reviewed the evidence in this case and concluded that petitioner had not proved loss causation. *Id.* at 11a-54a. The court stated that, but for that failure of proof, it would have certified the proposed class. *Id.* at 4a, 54a.

3. The court of appeals affirmed. Pet. App. 111a-136a. The court recognized that, under the fraud-on-the-market theory, "it is assumed that in an efficient, well-developed market all public information about a company is known to the market and is reflected in the stock price." *Id.* at 112a. For that reason, "[w]hen a company has publicly made material misrepresentations about its business," courts "may presume that a person who buys the company's stock has relied on the false information." *Ibid.*; see *id.* at 114a.

The court of appeals held, however, that a putative class representative in a securities-fraud suit may not "take advantage of the fraud-on-the-market presumption of reliance" unless it proves loss causation. Pet. App. 115a. Relying on its prior decision in *Oscar*, the court stated that "[i]n order to obtain class certification on its claims," petitioner was required to establish, by a preponderance of the evidence, "that the corrected truth of the former falsehoods actually caused the stock price to fall and resulted in losses." *Id.* at 113a. The court made clear in particular that "it is not enough merely to show that the [stock price] declined after a statement reporting negative news." *Id.* at 116a. Rather, the court

stated, the plaintiff must show in addition that the decline in stock price was caused by the correction of the defendant's prior misstatement rather than by some other contemporaneous disclosure. *Id.* at 117a-118a. The court characterized this additional requirement as a "rigorous" one that typically "requires both expert testimony and analytical research or an event study that demonstrates a linkage between the culpable disclosure and the stock-price movement." *Id.* at 130a.

The court of appeals noted that the parties "d[id] not dispute the efficiency of the market or [petitioner's] trading activity" in this case. Pet. App. 115a. After reviewing all of the evidence, however, the court concluded that petitioner had failed to prove loss causation, and it therefore affirmed the denial of class certification. *Id.* at 123a-136a.

SUMMARY OF ARGUMENT

When the named plaintiff in a private securities-fraud class action invokes the fraud-on-the-market presumption of reliance, the plaintiff need not prove the separate element of loss causation in order to obtain class certification.

A. Federal Rule of Civil Procedure 23 sets out the requirements for certification of a case as a class action. Rule 23 required petitioner to establish, *inter alia*, that common questions of law or fact predominated over issues that affect only individual class members. In order to make that showing, petitioner invoked the fraud-on-the-market presumption and established the facts necessary to support it. The court of appeals nevertheless held that the class could not be certified because petitioner had not proved loss causation. That was error, because proof of loss causation is not needed to satisfy

any of Rule 23's requirements, and the court of appeals did not suggest that the evidence of loss causation would vary among members of the class. The court was not authorized to add prerequisites for class certification in order to diminish the burdens imposed on defendants in private securities-fraud class actions.

B. *Basic Inc.* v. *Levinson*, 485 U.S. 224 (1988), does not support the Fifth Circuit's approach. In approving the fraud-on-the-market presumption of reliance, the Court in *Basic* did not suggest that it was modifying the requirements for class certification under Rule 23. Although the presumption of reliance is rebuttable, the *Basic* Court's analysis reflects an expectation that any rebuttal will occur at summary judgment or at trial, not at the outset of the case. A defendant who rebuts the presumption of reliance defeats the plaintiff's claim on the merits by preventing him from establishing an essential element of his cause of action. So long as the evidence by which the defendant seeks to rebut the presumption is likely to be common to class members generally, the possibility of a successful rebuttal does not render the case unsuitable for class treatment. In any event, this Court's decision in *Dura Pharmaceuticals, Inc.* v. *Broudo*, 544 U.S. 336 (2005), confirms that the elements of reliance and loss causation are distinct, and that the plaintiff's perceived inability to prove loss causation does not rebut the fraud-on-the-market presumption.

C. The court of appeals' approach is contrary to this Court's decision in *Eisen* v. *Carlisle & Jacquelin*, 417 U.S. 156, 162-163 (1974), which holds that the plaintiff's perceived likelihood of success on the merits is not relevant to the class-certification inquiry. The Fifth Circuit's conflation of merits and class-certification require-

ments would have been erroneous even if the court had simply incorporated into the Rule 23 analysis a merits inquiry (*e.g.*, whether the plaintiff's complaint adequately alleged a violation of Section 10(b) and Rule 10b-5) that the district court is authorized to conduct at a threshold stage of the suit. The court of appeals compounded that error by requiring the named plaintiff in a securities-fraud class-action to prove loss causation by a preponderance of the evidence in order to obtain class certification. The court of appeals thus required the district court, at the class-certification stage of a private securities-fraud suit, to conduct a much more demanding merits inquiry than the court could appropriately conduct in ruling on a motion to dismiss or for summary judgment. The court of appeals erred by requiring the plaintiff to prove a significant element of its case at a hold stage of the litigation, without the benefit of iscovery and without consideration of its claims by a jury. The judgment below should be reversed.

ARGUMENT

A PRIVATE SECURITIES-FRAUD PLAINTIFF THAT INVOKES THE FRAUD-ON-THE-MARKET PRESUMPTION OF RELIANCE NEED NOT PROVE LOSS CAUSATION IN ORDER TO OBTAIN CLASS CERTIFICATION

A. The Court Of Appeals Erred By Considering Loss Causation At The Class-Certification Stage Without Relating That Inquiry To The Requirements Of Rule 23

1. In order to certify a case as a class action, a federal district court must determine that the proposed class satisfies the requirements imposed by Federal Rule of Civil Procedure 23. See, *e.g.*, *Shady Grove Orthopedic Assocs., P.A.* v. *Allstate Ins. Co.*, 130 S. Ct. 1431, 1437 (2010) (*Shady Grove*); *Eisen* v. *Carlisle &*

Jacquelin, 417 U.S. 156, 162-163 (1974). Under Section (a) of Rule 23, the named plaintiff must show (1) numerosity, *i.e.*, that "the class is so numerous that joinder of all members is impracticable"; (2) commonality, *i.e.*, that "there are questions of law or fact common to the class"; (3) typicality, *i.e.*, that "the claims or defenses of the representative parties are typical of the claims or defenses of the class"; and (4) adequacy of representation, *i.e.*, that "the representative parties will fairly and adequately protect the interests of the class." Fed. R. Civ. P. 23(a); see, *e.g.*, *General Tel. Co. of the Sw.* v. *Falcon*, 457 U.S. 147, 156 (1982).

The named plaintiff must also establish that the suit falls within one of three categories of class actions described in Section (b) of Rule 23. See, *e.g.*, *Amchem Prods., Inc.* v. *Windsor*, 521 U.S. 591, 614 (1997). Under Section (b), a class action may be maintained if (1) prosecuting separate actions would risk adversely affecting class members or the opposing party; (2) "the party opposing the class has acted or refused to act on grounds that apply generally to the class" and "final injunctive relief or corresponding declaratory relief is appropriate" on a class-wide basis; or (3) "questions of law or fact common to class members predominate over any questions affecting only individual members" and "a class action is superior to other available methods for fairly and efficiently adjudicating the controversy." Fed. R. Civ. P. 23(b).

It is the named plaintiff's burden to establish that the proposed class meets the requirements set out in Rule 23. See, *e.g.*, *Amchem*, 521 U.S. at 613-614; see also 5 *Moore's Federal Practice* § 23.83, at 23-383 (3d ed.

2010).[1] If the named plaintiff makes that showing, then class certification is appropriate. *Shady Grove*, 130 S. Ct. at 1437.

2. In this case, the district court found—and the parties agree—that the proposed class satisfies the four prerequisites set out in Section (a) of Rule 23. See Pet. App. 3a. The parties' dispute centers on whether class certification is warranted under Section (b) of the rule.

Petitioner sought class treatment under Section (b)(3), on the ground that common questions of law or fact predominate over questions that affect only individual class members, so that a class action is the superior method for adjudicating the parties' dispute. J.A. 146a-148a (motion for class certification); see Fed. R. Civ. P. 23(b)(3). Petitioner has alleged that respondents made material misstatements that inflated Halliburton's stock price, and that respondents subsequently made corrective disclosures that caused the stock price to decline, causing economic loss to the members of the class (*i.e.*, persons who had purchased Halliburton stock between the initial misstatements and the later corrections). Pet. App. 4a-5a, 11a; see Fourth Consolidated Amended Compl. ¶¶ 295-301. In order to establish that common questions predominate on the element of reliance, petitioner invoked the fraud-on-the-market presumption. See Pet. App. 5a-6a.

Under the fraud-on-the-market doctrine, "reliance is presumed when the statements at issue become public"

---

[1] The courts that have addressed the question have held that facts relevant to whether the Rule 23 requirements have been met must be established by a preponderance of the evidence. See Pet. App. 115a; *In re Hydrogen Peroxide Antitrust Litig.*, 552 F.3d 305, 320 (3d Cir. 2008); *Teamsters Local 445 Freight Div. Pension Fund* v. *Bombardier, Inc.*, 546 F.3d 196, 202 (2d Cir. 2008).

because it is presumed that relevant "public information is reflected in the market price of the security." *Stoneridge Inv. Partners, LLC* v. *Scientific-Atlanta, Inc.*, 552 U.S. 148, 159 (2008); see *Basic Inc.* v. *Levinson*, 485 U.S. 224 (1988). To invoke that presumption at the class-certification stage, petitioner was required to show that respondents' alleged misrepresentations were made publicly, that the company's shares were traded in an efficient market, and that the plaintiff traded shares between the time the misrepresentations were made and the time the truth was revealed. *Id.* at 241-242; see, *e.g.*, *In re PolyMedica Corp. Sec. Litig.*, 432 F.3d 1, 17 (1st Cir. 2005). Once petitioner established those facts, the district court could appropriately presume that petitioner and all similarly situated investors could satisfy the reliance element of their securities-fraud cause of action. See *Basic*, 485 U.S. at 247. The presumption of reliance makes the element of reliance subject to common proof. That is true even if the presumption is ultimately rebutted at trial and the plaintiffs are therefore unable to prove the reliance element of their claim on the merits.

To be sure, proof of those facts necessary to invoke the fraud-on-the-market presumption did not establish that respondents' statements were actually false, that respondents had acted with the requisite scienter, or that petitioner or any unnamed class member had suffered economic loss as a result. Neither respondents nor the court of appeals, however, has identified any reason to suppose that proof as to those additional elements of petitioner's cause of action will vary meaningfully among the members of the putative class. By satisfying the prerequisites to the fraud-on-the-market presumption, petitioners showed that the reliance element

is subject to common proof as well, so that "common questions predominate[] over individual questions, as required by Federal Rules of Civil Procedure 23(a)(2) and (b)(3)." *Basic*, 485 U.S. at 242.

3. In holding that petitioner was required to prove loss causation in order to obtain class certification, the court of appeals relied on its prior decision in *Oscar Private Equity Invs.* v. *Allegiance Telecom, Inc.*, 487 F.3d 261 (5th Cir. 2007). In *Oscar*, members of the proposed plaintiff class alleged that they had purchased a telecommunications company's stock at a price that had been inflated due to the company's material misstatements about its business, and that they had suffered losses when the company later made corrective disclosures. *Id.* at 262-264. The court in *Oscar* correctly recognized that the plaintiff class could rely on the fraud-on-the-market doctrine "to presume that each class member has satisfied the reliance element of their 10b-5 claim," so that common questions of reliance would predominate. *Id.* at 264. The court concluded, however, that "*Basic* allows each of the circuits room to develop its own fraud-on-the-market rules," and the court exercised that purported discretion by requiring plaintiffs to "establish loss causation in order to trigger the fraud-on-the-market presumption." *Id.* at 264-265 (internal quotation marks omitted); see *id.* at 269. "In order to obtain class certification" under that approach, petitioner "was required to prove * * * that the corrected truth of the former falsehoods actually caused the stock price to fall and resulted in losses." Pet. App. 113a.

The court of appeals had no authority to impose a prerequisite to class certification that is untethered to the requirements of Rule 23. If the requirements set out in Rule 23 are satisfied, the case may proceed as a

class action. That is clear from the text of Rule 23, which states that "[a] class action may be maintained if Rule 23(a) is satisfied and if" the proposed class fits within one of the three categories described in Rule 23(b). Fed. R. Civ. P. 23(b). The Court recently confirmed that this language "creates a categorical rule entitling a plaintiff whose suit meets the specified criteria to pursue his claim as a class action." *Shady Grove*, 130 S. Ct. at 1437.

Contrary to the suggestions of respondents (Supp. Br. in Opp. 5) and the Fifth Circuit (*Oscar*, 487 F.3d at 264), nothing in *Basic* gives lower courts "room" to fashion their own standards for certifying securities-fraud class actions. To be sure, the Court in *Basic* noted, as a practical benefit of the fraud-on-the-market presumption, that the presumption would facilitate class actions by allowing reliance to be proved through evidence common to all members of the class. See 485 U.S. at 242. The Court thus recognized that the proper application of Rule 23(b)(3), which requires that common questions of law or fact "predominate over any questions affecting only individual [class] members," Fed. R. Civ. P. 23(b)(3), will depend in part on the type of evidence needed to prove a particular element of a plaintiff's claim. That recognition in no way suggests that a lower court can deviate from the terms of Rule 23, either by certifying a class when the rule's requirements have not been satisfied, or by imposing additional prerequisites to class certification beyond those stated in the rule itself.

The Fifth Circuit in *Oscar* stated that "a district court's [class] certification order often bestows upon plaintiffs extraordinary leverage, and its bite should dictate the process that precedes it." 487 F.3d at 267.

The court's assessment of the burdens that class actions entail, however, does not authorize it to impose requirements above and beyond those specified in Rule 23. Rule 23 sets out "requirements the[] [courts] are bound to enforce." *Amchem*, 521 U.S. at 620; see *Ortiz* v. *Fibreboard Corp.*, 527 U.S. 815, 861 (1999) (courts "are not free to alter" Rule 23); *East Tex. Motor Freight Sys., Inc.* v. *Rodriguez*, 431 U.S. 395, 405 (1977) ("careful attention to the requirements of [Rule] 23 remains * * * indispensable"). The "Federal Rules take effect after an extensive deliberative process involving many reviewers"—including the Rules Advisory Committee, public commenters, the Judicial Conference, this Court, and Congress—and "[c]ourts are not free to amend a rule outside th[at] process." *Amchem*, 521 U.S. at 620-622. The task for a lower court in ruling on a class-certification request is to apply Rule 23 according to its terms, not to devise requirements that the court deems commensurate to the burdens that class certification would place upon the defendant.

Meritorious private securities-fraud actions are "an essential supplement to criminal prosecutions and civil enforcement actions." *Tellabs, Inc.* v. *Makor Issues & Rights, Ltd.*, 551 U.S. 308, 313 (2007). The responsibility for addressing any concerns about abusive or meritless claims rests with Congress, rather than the courts. Indeed, Congress has already taken steps to address such concerns. In the Private Securities Litigation Reform Act of 1995 (PSLRA), Pub. L. No. 104-67, 109 Stat. 737, Congress responded to perceived abuses in private securities-fraud actions by, *inter alia*, establishing procedures for the appointment of lead plaintiffs and lead counsel in suits brought as class actions, 15 U.S.C. 78u-4(a)(3); imposing heightened pleading requirements,

15 U.S.C. 78u-4(b)(1)-(2); mandating an automatic stay of discovery pending resolution of a motion to dismiss, 15 U.S.C. 78u-4(b)(3)(B); creating a safe-harbor for forward-looking statements, 15 U.S.C. 78u-5; authorizing sanctions for abusive litigation, 15 U.S.C. 78u-4(c); and establishing limitations on recoverable damages and attorney's fees, 15 U.S.C. 78u-4(a)(6) and (c). See *Tellabs*, 551 U.S. at 319-322.

Three years later, Congress enacted the Securities Litigation Uniform Standards Act of 1998, Pub. L. No. 105-353, 112 Stat. 3227, to prevent plaintiffs in private securities-fraud actions from proceeding under state law in order to avoid the requirements of the PSLRA. See *Merrill Lynch, Pierce, Fenner & Smith Inc.* v. *Dabit*, 547 U.S. 71, 80-83 (2006). Particularly because Congress has recently adjusted the procedural and substantive standards for private securities-fraud suits, including through provisions (see 15 U.S.C. 78u-4(a)) specifically directed at class actions, the Fifth Circuit was not authorized "to make its own further adjustments by reinterpreting Rule 23 to make likely success on the merits essential to class certification in securities-fraud suits." *Schleicher* v. *Wendt*, 618 F.3d 679, 686 (7th Cir. 2010).

B. Nothing In *Basic* Or The Fraud-On-The-Market Theory Supports The Fifth Circuit's Requirement That Plaintiffs Must Prove Loss Causation At The Class-Certification Stage

In defending the court of appeals' approach, respondents contend that "[l]oss causation * * * is central to the presumption of reliance" as described in *Basic* (Br. in Opp. 23; see Supp. Br. in Opp. 6-8), and that the defendant's ability to rebut the presumption of reliance makes it appropriate to place on petitioner the burden of prov-

ing loss causation at the class-certification stage (Br. in Opp. 9-11; Supp. Br. in Opp. 8-11). Neither of those propositions is correct.

1. The Fifth Circuit in *Oscar* stated that placing the burden on plaintiffs to prove loss causation at the class-certification stage was consistent with the *Basic* Court's recognition that a defendant may rebut the presumption of reliance. 467 F.3d at 265. The Court in *Basic* did not state, however, that a defendant may rebut the presumption of reliance at the class-certification stage. To the contrary, the Court's only discussion of when that rebuttal could occur strongly indicates that such an inquiry is a matter for summary judgment or trial. After explaining that the fraud-on-the-market presumption might be rebutted by proof that information had "credibly entered the market and dissipated the effects of the misstatements" on the stock's price, the Court acknowledged a potential "incongruity between the assumption that Basic shares are traded on a well-developed, efficient, and information-hungry market, and the allegation that such a market could remain misinformed, and its valuation of Basic shares depressed, for 14 months, on the basis of the three public statements." 485 U.S. at 249 & n.29. The Court stated that "[p]roof of that sort is a matter for trial, throughout which the District Court retains the authority to amend the certification order as may be appropriate." *Id.* at 249 n.29.

That analysis suggests that, if the evidence ultimately demonstrates that the distortive effect of a defendant's misstatements was cured as of a particular date, a class-certification order may be amended to exclude class members who purchased or sold shares after that date. But it does not suggest that a district court should make factual determinations regarding price dis-

tortion as part of its initial class-certification inquiry. To the contrary, the Court stated that "[p]roof of that sort is a matter for trial." *Basic*, 485 U.S. at 249 n.29.

Thus, nothing in *Basic* modifies the settled rule that a court ruling on a class-certification request may consider the merits of the named plaintiff's claims only to the extent relevant to the criteria set forth in Rule 23. To be sure, if the defendant seeks to rebut the fraud-on-the-market presumption, the finder of fact may ultimately be required to determine whether actual market distortion occurred. But so long as the market-distortion inquiry turns on factual or legal issues that are common to the members of the putative class, class certification is appropriate regardless of the perceived likelihood at that early stage that the plaintiffs will be able to establish reliance on the merits. See *Schleicher*, 618 F.3d at 685; pp. 22-24, *infra*.

2. The fact that *Basic*'s fraud-on-the-market presumption is rebuttable does not logically imply that all evidence offered to rebut it will be germane to class certification. The fraud-on-the-market presumption speaks to the type of proof that will establish an essential element of a private plaintiff's securities-fraud claim. The presumption significantly facilitates the certification of private securities-fraud suits as class actions, since it greatly increases the likelihood that the reliance element can be proved through evidence common to all class members. Nevertheless, the effect of a successful rebuttal is to defeat the plaintiff's suit on the merits, not to render it unsuitable for class treatment.

For purposes of Rule 23, a defendant's attempt to rebut the fraud-on-the-market presumption is no different from an effort to contest any other element of the plaintiff's claim, or to establish an affirmative defense.

To the extent that the defendant's anticipated efforts to rebut the presumption bear on the Rule 23 analysis, the pertinent question is not whether those efforts are likely to be successful, but whether the district court's resolution of the issue can be expected to turn on proof that is common to class members generally. If a defendant seeks to rebut the fraud-on-the-market presumption through evidence that is likely to vary substantially from plaintiff to plaintiff, the prospect of such individualized proof may bear on the district court's determination whether "questions of law or fact common to class members predominate." Fed. R. Civ. P. 23(b)(3); see *Schleicher*, 618 F.3d at 685 ("If something about 'the merits' also shows that individual questions predominate over common ones, then certification may be inappropriate."). But so long as the relevant determinations "affect[] investors in common" and therefore "can be made on a class-wide basis," a court may not deny class certification based on its view that the defendant will ultimately prevail. *Id.* at 687; see, *e.g.*, *In re Initial Pub. Offering Sec. Litig.*, 260 F.R.D. 81, 106 n.214 (S.D.N.Y. 2009).

In neither *Oscar* nor in this case did the Fifth Circuit suggest that the loss-causation inquiry would vary from plaintiff to plaintiff in a way that would prevent common issues from predominating. Here, the determination whether respondents' eventual disclosures caused the price of Halliburton stock to drop will be the same for every class member. Indeed, respondents acknowledge that in this case, "loss causation stands or falls on a classwide basis." Supp. Br. in Opp. 9. Thus, even if evidence suggesting the absence of loss causation were properly viewed as rebutting the presumption of reliance, respondents' efforts to contest the loss causation

issue would provide no basis for denying class certification.[2]

3. The Court stated in *Basic* that a *defendant* "may rebut proof of the elements giving rise to the presumption, or show that the misrepresentation in fact did not lead to a distortion of price or that an individual plaintiff traded or would have traded despite his knowing the statement was false." 485 U.S. at 248. All of the examples the Court provided involved showings that a *defendant* could make. *Id.* at 248-249. See, *e.g.*, *In re Salomon Analyst Metromedia Litig.*, 544 F.3d 474, 483 (2d Cir. 2008) ("Under *Basic*, * * * the burden of showing that there was no price impact is properly placed on defendants at the rebuttal stage.").[3] Thus, even if a de-

---

[2] In both *Oscar* and this case, the clear thrust of the court of appeals' analyses was that proof of loss causation was lacking with respect to *all* members of the class. If that conclusion were treated as dispositive, it would logically imply that petitioners' suit cannot proceed either as a class action or as an individual suit, since loss causation is an essential element of petitioner's own claim. As respondents have emphasized, however, the court of appeals' decision "d[id] not finally resolve the * * * dispute" (Br. in Opp. 16) because petitioner remains free to pursue its individual claim. In allowing the individual suit to go forward, the court of appeals presumably recognized that, notwithstanding petitioner's purported failure to establish loss causation by a preponderance of the evidence at a threshold stage of the litigation, petitioner may still be able to prove that element of its claim to a reasonable jury's satisfaction after discovery and trial. See pp. 25-28, *infra*. The solution the Fifth Circuit devised—*i.e.*, denying class certification based on a judicial finding that loss causation had not been proved, while implicitly recognizing that the loss-causation issue would remain open in petitioner's individual suit—has no basis either in Rule 23 or in this Court's precedents.

[3] Although the Second Circuit correctly recognized that defendants bear the burden of rebutting the fraud-on-the-market presumption, the court erred in stating that a district court "must permit defendants to

fendant could defeat class certification at the outset by rebutting the fraud-on-the-market presumption of reliance, a class plaintiff could not properly be required to prove loss causation at that threshold stage of the suit.

4. Contrary to the Fifth Circuit's suggestion in *Oscar*, see 487 F.3d at 269-270, a plaintiff's inability to prove loss causation does not prove that the defendant's alleged misstatements had no initial impact on the price of the relevant security. When the Court in *Basic* explained how a defendant could "rebut the presumption of reliance," 485 U.S. at 248-249, it did not mention loss causation. Instead, the Court stated that the defendant could rebut the presumption by "sever[ing] the link between the alleged misrepresentation and either the price received (or paid) by the plaintiff, or his decision to trade at a fair market price." *Id.* at 248. The Court's reference to the "price received (or paid) by the plaintiff" reflects the Court's focus on the initial transaction, not on subsequent events that might (or might not) cause the plaintiff to suffer an economic loss.

As this Court's decision in *Dura Pharmaceuticals, Inc.* v. *Broudo*, 544 U.S. 336, 341 (2005) (*Dura*), makes clear, reliance and loss causation are distinct elements of a securities-fraud claim. In *Dura*, the Court held that a plaintiff does not adequately allege loss causation simply by alleging that he purchased stock at an inflated price due to a defendant's misrepresentation or omission. *Id.* at 342-346. The Court explained that an investor who buys stock at an inflated price suffers no immediate loss because "the inflated purchase payment is offset by ownership of a share that *at that instant* pos-

---

present their rebuttal arguments before certifying a class." *In re Salomon Analyst Metromedia Litig.*, 544 F.3d at 485 (internal quotation marks omitted). See pp. 17-19, *supra*.

sesses equivalent value." *Id.* at 342. While acknowledging the existence of a "logical link between the inflated share purchase price and any later economic loss," the Court characterized that connection as "not invariably strong" because the purchaser's subsequent sale of the shares at a lower price "may reflect, not the earlier misrepresentation, but changed economic circumstances, changed investor expectations, [or] new industry-specific or firm-specific facts, conditions, or other events." *Id.* at 343.

Respondents contend (Supp. Br. in Opp. 6) that the recognized distinction between reliance and loss causation is irrelevant here because "the absence of *either one* of these elements destroys the fraud-on-the-market presumption." That is incorrect. To be sure, a plaintiff must ultimately establish both reliance and loss causation in order to *prevail* in a securities-fraud suit. But while the plaintiff's failure to prove loss causation precludes any recovery, it does not rebut the fraud-on-the-market presumption or otherwise demonstrate that the plaintiff did not rely on any material misstatement.

The gravamen of the fraud-on-the-market theory is that, because "the market price of shares traded on well-developed markets reflects all publicly available information," any public material misstatements bearing on the stock's value will presumptively affect the amount that any investor pays for shares during the period that the market is misled. *Basic*, 485 U.S. at 246; see *id.* at 242-243, 246-247. The existence of market distortion, however, does not mean that such investors will ultimately suffer any economic loss. Even if a misrepresentation inflates the purchase price, if "the purchaser sells the shares quickly before the relevant truth begins to leak out, the misrepresentation will not have led to any

loss." *Dura*, 544 U.S. at 342. If the purchaser "sells later after the truth makes its way into the marketplace * * * even at a lower price, that lower price may reflect, not the earlier misrepresentation, but" other factors. *Id.* at 342-343. See *Schleicher*, 618 F.3d at 686-687 (providing additional example in which the absence of loss causation as to certain members of a putative class does not disprove that the price of the stock had been distorted by the company's misrepresentations). Respondents are therefore wrong in contending (Supp. Br. in Opp. 6) that a plaintiff's inability to prove loss causation "destroys the fraud-on-the-market presumption."

C. The Court Of Appeals Erred In Treating Petitioner's Perceived Likelihood Of Success On The Merits As Relevant To The Class-Certification Inquiry, And The Court Compounded Its Error By Requiring Petitioner To Prove Loss Causation By A Preponderance Of The Evidence At The Class-Certification Stage

1. In *Eisen* v. *Carlisle & Jacquelin*, *supra*, the Court considered whether Rule 23 allows a district court to consider the merits of a plaintiff's claims "as part of the determination whether a suit may be maintained as a class action." 417 U.S. at 177-179. In *Eisen*, the district court had conducted a "preliminary hearing on the merits" to determine whether the plaintiff or the defendants should bear the cost of notice to the class. *Id.* at 168. Because the district court concluded that the plaintiff was more likely than not to prevail at trial, the court imposed the cost of notice on the defendants. *Ibid.* This Court disapproved that approach, "find[ing] nothing in either the language or history of Rule 23 that gives a court any authority to conduct a preliminary inquiry into

the merits of a suit in order to determine whether it may be maintained as a class action." *Id.* at 177.

The Court explained that, at the class-certification stage, "the question is not whether the plaintiff or plaintiffs have stated a cause of action or will prevail on the merits, but rather whether the requirements of Rule 23 are met." *Eisen*, 417 U.S. at 178 (quoting *Miller* v. *Mackey Int'l, Inc.*, 452 F.2d 424, 427 (5th Cir. 1971)). The Court noted that Rule 23 specifies the prerequisites to certification of a case as a class action, *id.* at 162-163, and it found nothing in the rule that allows a court to condition class certification on likely success on the merits, *id.* at 177. Accordingly, the Court held that the merits of the plaintiff's claims may be considered at the class-certification stage only when necessary to determine whether the proposed plaintiff class meets the requirements of Rule 23. See *id.* at 177-178; see also Fed. R. Civ. P. 23(c)(1) advisory committee's note (2003) (Amendment) ("an evaluation of the probable outcome on the merits is not properly part of the certification decision").

To be sure, the class-certification question may "involve[] considerations that are enmeshed in the factual and legal issues comprising the plaintiff's cause of action." *Falcon*, 457 U.S. at 160 (internal quotation marks omitted). The determination whether "questions of law or fact common to class members predominate," Fed. R. Civ. P. 23(b)(3), may require analysis of the elements of the plaintiff's claims and the manner in which those elements would ordinarily be proved. See *In re Hydrogen Peroxide Antitrust Litig.*, 552 F.3d at 317; *Shook* v. *Board of County Comm'rs of El Paso County*, 543 F.3d 597, 612 (10th Cir. 2008); see also, *e.g.*, *Falcon*, 457 U.S. at 155-160 (conducting such an analysis). In *Basic*, for

example, the Court's holding that the securities-fraud claims were amenable to class treatment rested in part on its antecedent determination that the reliance element could be proved through the fraud-on-the-market presumption. See 485 U.S. at 242-250; pp. 10-11, *supra*. But the possibility of "overlap between a Rule 23 requirement and a merits issue" does not mean that the district court may treat likelihood of success on the merits as a prerequisite for class certification. *In re Initial Pub. Offerings Sec. Litig.*, 471 F.3d 24, 41 (2d Cir. 2006). So long as a plaintiff demonstrates that common questions predominate over questions that affect only individual class members (and that the suit meets the other requirements in Rule 23), he is "entitl[ed] * * * to pursue his claim as a class action." *Shady Grove*, 130 S. Ct. at 1437.

2. The court below, relying on *Oscar*, held that a plaintiff in a putative securities-fraud class action is required to prove loss causation "at the class certification stage by a preponderance of all admissible evidence." Pet. App. 115a (quoting *Oscar*, 487 F.3d at 269). The court required that showing even though the parties "did not dispute" the facts giving rise to the fraud-on-the-market presumption (the efficiency of the market and petitioner's trading activity). *Ibid.* The court of appeals further held that, even when the price of the relevant securities is shown to have fallen soon after the defendant's prior misstatements were corrected, the plaintiff must prove at the class-certification stage that the price drop was caused by the corrective statement rather than by some other contemporaneous disclosure. *Id.* at 117a-118a.

The burden that rule imposes is a heavy one. Because petitioner alleged that respondents had made

false statements followed by corrective disclosures that resulted in losses to the class members, the court required petitioner to show that respondents' alleged corrective disclosures were "*related* to the false, non-confirmatory positive statement made earlier" and "that it is *more probable than not* that it was this related corrective disclosure, and not any other unrelated negative statement, that caused the stock price decline." Pet. App. 119a-120a (internal quotation marks omitted); see *Oscar*, 487 F.3d at 265, 270. In the court's view, such a showing generally "requires both expert testimony and analytical research or an event study that demonstrates a linkage between the culpable disclosure and the stock-price movement." Pet. App. 130a; see *Oscar*, 487 F.3d at 270-271. The court then conducted a thorough merits analysis, addressing each alleged misstatement and corrective disclosure in turn before concluding that petitioner had failed to prove that the class losses were likely caused by respondents' corrective disclosures. Pet. App. 123a-136a.

3. Respondents contend that the Fifth Circuit's approach has no substantive impact on the outcome of the lawsuit and that this case presents "only the procedural question whether certain meritless class actions should be certified." Supp. Br. in Opp. 5. That assertion might have force if the district court had denied class certification on the ground that petitioner's *complaint* did not sufficiently *allege* a violation of Section 10(b) and Rule 10b-5. Although such an approach would be analytically wrong, see *Eisen*, 417 U.S. at 178 (explaining that, under Rule 23, "the question is not whether the plaintiff or plaintiffs have stated a cause of action"), the likely practical consequences of such an error would be slight, since a district court in ruling on a motion to dismiss can

assess the adequacy of a plaintiff's allegations at a threshold stage of the case. If a district court concludes that a plaintiff's allegations are legally insufficient, and if that assessment of the complaint is otherwise sound, an erroneous effort to incorporate that analysis into the class-certification inquiry is unlikely to change the ultimate disposition of the case.

The error committed by the Fifth Circuit in *Oscar* and in this case, by contrast, has real practical significance. The court of appeals did not simply shoehorn a motion-to-dismiss inquiry into the class-certification analysis, but instead required petitioner to prove an essential element of its case at a threshold stage of the litigation. The error in that approach went far beyond simply placing the wrong label on an inquiry that the district court was in substance permitted to undertake. By requiring such proof at the class-certification stage, and by directing the district court to determine whether that burden had been discharged, the court of appeals improperly preempted the merits inquiries that occur at summary judgment and at trial. For two principal reasons, that error creates a significant danger that class certification will be denied in cases where the plaintiff class could ultimately prevail.

First, the *Oscar* rule requires plaintiffs to prove an essential element of their case before they have had an adequate opportunity to adduce the evidence required for such a showing. The lengthy analyses of loss causation performed by the courts below in this case attest to the fact that full consideration of loss causation is a detailed and complex inquiry. Under Rule 23, however, class certification is to be decided "[a]t an early practicable time after a person sues or is sued as a class representative." Fed. R. Civ. P. 23(c)(1). At that point, dis-

covery may not be complete, or even substantially underway.[4] The *Oscar* court suggested that discovery was not necessary to prove loss causation because "[i]ts 'proof' is drawn from public data and public filings." 487 F.3d at 267. That suggestion is belied, however, by the court's rejection of the expert testimony presented in that case and its explanation that "plaintiffs must do more" by providing an "empirically-based showing" as to the cause of the plaintiff's loss. *Id.* at 270-271.

Second, even in cases where discovery would not meaningfully supplement the range of available evidence bearing on loss causation, the Fifth Circuit's approach improperly requires district courts to usurp the role of juries in resolving disputed loss-causation issues. In order to obtain summary judgment, a defendant must show that, viewing the evidence in the light most favorable to the plaintiff, there are no genuine issues of material fact for trial. See, *e.g.*, *Celotex Corp.* v. *Catrett*, 477 U.S. 317, 323-324 (1986); *Adickes* v. *S.H. Kress & Co.*, 398 U.S. 144, 157 (1970); Fed. R. Civ. P. 56(c). Summary judgment is not appropriate if "there are any genuine factual issues that properly can be resolved only by a finder of fact because they may reasonably be resolved

---

[4] A named plaintiff's lack of access to discovery at the class-certification stage of a securities-fraud suit is particularly significant if the Fifth Circuit's opinion in this case is read to require proof of scienter as well as (or as a supposed component of) loss causation. Compare Pet. App. 123a n.35 (plaintiff need not prove "intentional fraud" at class certification) with *id.* at 121a-122a (loss-causation showing requires proof that "the corrective disclosure shows the misleading or deceptive nature of the prior positive statements" and that "original estimates or predictions were designed to defraud"). Proof that the defendant acted with scienter may be particularly difficult to adduce before discovery has taken place.

in favor of either party." *Anderson* v. *Liberty Lobby, Inc.*, 477 U.S. 242, 250 (1986).

Under the Fifth Circuit's approach, however, the district court must decide at the class-certification stage whether the named plaintiff has proved loss causation by a preponderance of the evidence, not simply whether a reasonable fact-finder could so conclude. Under that preponderance standard, a named plaintiff could be denied class certification even if it proffered sufficient evidence of loss causation to survive a summary judgment motion. The court of appeals' approach therefore does not simply expedite the resolution of an issue that the district court would ultimately have been required to decide in any event. Rather, it improperly denies class members in securities-fraud suits the opportunity to have loss-causation issues resolved by a jury. See *Tellabs*, 551 U.S. at 326-328 (recognizing that plaintiffs are entitled to have their securities-fraud claims decided by a jury once a sufficient initial showing has been made).[5]

4. A central theme of respondents' submissions is that class-action plaintiffs should be required to prove loss causation at the class-certification stage in order to avoid certification of meritless actions. Br. in Opp. 8-9, 23-25; Supp. Br. in Opp. 2, 4, 5, 9, 11. Other procedural mechanisms (*e.g.*, motions to dismiss under Federal Rule of Civil Procedure 12, or motions for summary

---

[5] Respondents contend (Supp. Br. in Opp. 11) that the court of appeals' approach is "not inconsistent with either summary judgment or jury-trial principles" because a jury may revisit the issue of loss causation and reach a conclusion different from that of the district court. That argument is misconceived because the denial of class certification effectively precludes the claims of unnamed class members from being presented to a jury.

judgment under Rule 56), however, are specifically designed to avoid needlessly protracted litigation of meritless claims. The prerequisites to class certification under Rule 23 are not intended as additional checks on meritless suits, but instead address the distinct question whether disputed merits issues can appropriately be resolved on a classwide basis. See *Schleicher*, 618 F.3d at 685 (explaining that consideration of the merits is "limited to those aspects of the merits that affect the decisions essential under Rule 23"); *id.* at 686 ("Rule 23 allows certification of classes that are fated to lose as well as classes that are sure to win."). Use of Rule 23 as an additional merits screen is particularly inappropriate in the securities-fraud context, where Congress has recently addressed the burdens imposed by private suits, including through certain provisions directed specifically at class actions, without requiring plaintiffs to prove an element of their claims as a prerequisite to class certification. See pp. 14-15, *supra*.

If, after discovery, petitioners cannot adduce evidence from which a reasonable jury could infer that respondents' misstatements caused economic loss to the plaintiff class, respondents will be entitled to summary judgment. Alternatively, if it becomes apparent that some class members cannot recover (*e.g.*, because the evidence shows that the relevant facts were made known to the market before those class members purchased their shares), then the district court may modify the class-certification order. See *Schleicher*, 618 F.3d at 686-687; see also *Falcon*, 457 U.S. at 160 ("Even after a certification order is entered, the judge remains free to modify it in light of subsequent developments in the litigation."). It puts "the cart before the horse," however, to insist that plaintiffs prove that the defendant's fraud

caused their losses before any class can be certified. *Schleicher*, 618 F.3d at 687.

CONCLUSION

The judgment of the court of appeals should be reversed.

Respectfully submitted.

APPENDIX

1. 15 U.S.C. 78j provides, in pertinent part:

Manipulative and deceptive devices

It shall be unlawful for any person, directly or indirectly, by the use of any means or instrumentality of interstate commerce or of the mails, or of any facility of any national securities exchange—

* * * * *

(b) To use or employ, in connection with the purchase or sale of any security registered on a national securities exchange or any security not so registered, or any securities-based swap agreement (as defined in section 206B of the Gramm-Leach-Bliley Act), any manipulative or deceptive device or contrivance in contravention of such rules and regulations as the Commission may prescribe as necessary or appropriate in the public interest or for the protection of investors.

* * * * *

2. 15 U.S.C. 78u-4 provides, in pertinent part:

Private securities litigation

* * * * *

(b) Requirements for securities fraud actions

(1) Misleading statements and omissions

In any private action arising under this chapter in which the plaintiff alleges that the defendant—

(A) made an untrue statement of a material fact; or

(B) omitted to state a material fact necessary in order to make the statements made, in the light of the circumstances in which they were made, not misleading;

the complaint shall specify each statement alleged to have been misleading, the reason or reasons why the statement is misleading, and, if an allegation regarding the statement or omission is made on information and belief, the complaint shall state with particularity all facts on which that belief is formed.

(2) Required state of mind

In any private action arising under this chapter in which the plaintiff may recover money damages only on proof that the defendant acted with a particular state of mind, the complaint shall, with respect to each act or omission alleged to violate this chapter, state with particularity facts giving rise to a strong inference that the defendant acted with the required state of mind.

(3) Motion to dismiss; stay of discovery

(A) Dismissal for failure to meet pleading requirements

In any private action arising under this chapter, the court shall, on the motion of any defendant, dismiss the complaint if the requirements of paragraphs (1) and (2) are not met.

(B) Stay of discovery

In any private action arising under this chapter, all discovery and other proceedings shall be stayed during the pendency of any motion to dismiss, unless the court finds upon the motion of any party that particularized discovery is necessary to preserve evidence or to prevent undue prejudice to that party.

(C) Preservation of evidence

(i) In general

During the pendency of any stay of discovery pursuant to this paragraph, unless otherwise ordered by the court, any party to the action with actual notice of the allegations contained in the complaint shall treat all documents, data compilations (including electronically recorded or stored data), and tangible objects that are in the custody or control of such person and that are relevant to the allegations, as if they were the subject of a continuing request for production of documents from an opposing party under the Federal Rules of Civil Procedure.

(ii) Sanction for willful violation

A party aggrieved by the willful failure of an opposing party to comply with clause (i) may apply to the court for an order awarding appropriate sanctions.

(D) Circumvention of stay of discovery

Upon a proper showing, a court may stay discovery proceedings in any private action in a State

court, as necessary in aid of its jurisdiction, or to protect or effectuate its judgments, in an action subject to a stay of discovery pursuant to this paragraph.

(4) Loss causation

In any private action arising under this chapter, the plaintiff shall have the burden of proving that the act or omission of the defendant alleged to violate this chapter caused the loss for which the plaintiff seeks to recover damages.

* * * * *

3. 17 C.F.R. 240.10b-5 provides, in pertinent part:

Employment of manipulative and deceptive devices.

It shall be unlawful for any person, directly or indirectly, by the use of any means or instrumentality of interstate commerce, or of the mails or of any facility of any national securities exchange,

* * * * *

(b) To make any untrue statement of a material fact or to omit to state a material fact necessary in order to make the statements made, in the light of the circumstances under which they were made, not misleading

* * * * *

4. Federal Rule Civil Procedure Rule 23 provides, in pertinent part:

Class Actions

(a) **Prerequisites.** One or more members of a class may sue or be sued as representative parties on behalf of all members only if:

(1) the class is so numerous that joinder of all members is impracticable;

(2) there are questions of law or fact common to the class;

(3) the claims or defenses of the representative parties are typical of the claims or defenses of the class; and

(4) the representative parties will fairly and adequately protect the interests of the class.

(b) **Types of Class Actions.** A class action may be maintained if Rule 23(a) is satisfied and if:

(1) prosecuting separate actions by or against individual class members would create a risk of:

(A) inconsistent or varying adjudications with respect to individual class members that would establish incompatible standards of conduct for the party opposing the class; or

(B) adjudications with respect to individual class members that, as a practical matter, would be dispositive of the interests of the other members not parties to the individual adjudications or would substantially impair or

impede their ability to protect their interests;

(2) the party opposing the class has acted or refused to act on grounds that apply generally to the class, so that final injunctive relief or corresponding declaratory relief is appropriate respecting the class as a whole; or

(3) the court finds that the questions of law or fact common to class members predominate over any questions affecting only individual members, and that a class action is superior to other available methods for fairly and efficiently adjudicating the controversy. The matters pertinent to these findings include:

(A) the class members' interests in individually controlling the prosecution or defense of separate actions;

(B) the extent and nature of any litigation concerning the controversy already begun by or against class members;

(C) the desirability or undesirability of concentrating the litigation of the claims in the particular forum; and

(D) the likely difficulties in managing a class action.

(c) Certification Order; Notice to Class Members; Judgment; Issues Classes; Subclasses.

(1) ***Certification Order.***

(A) *Time to Issue.* At an early practicable time after a person sues or is sued as a class representative, the court must determine by order whether to certify the action as a class action.

(B) *Defining the Class; Appointing Class Counsel.* An order that certifies a class action must define the class and the class claims, issues, or defenses, and must appoint class counsel under Rule 23(g).

(C) *Altering or Amending the Order.* An order that grants or denies class certification may be altered or amended before final judgment.

(2) ***Notice.***

(A) *For (b)(1) or (b)(2) Classes.* For any class certified under Rule 23(b)(1) or (b)(2), the court may direct appropriate notice to the class.

(B) *For (b)(3) Classes.* For any class certified under Rule 23(b)(3), the court must direct to class members the best notice that is practicable under the circumstances, including individual notice to all members who can be identified through reasonable effort. The notice must clearly and concisely state in plain, easily understood language:

(i) the nature of the action;

(ii) the definition of the class certified;

(iii) the class claims, issues, or defenses;

(iv) that a class member may enter an appearance through an attorney if the member so desires;

(v) that the court will exclude from the class any member who requests exclusion;

(vi) the time and manner for requesting exclusion; and

(vii) the binding effect of a class judgment on members under Rule 23(c)(3).

(3) ***Judgment.*** Whether or not favorable to the class, the judgment in a class action must:

(A) for any class certified under Rule 23(b)(1) or (b)(2), include and describe those whom the court finds to be class members; and

(B) for any class certified under Rule 23(b)(3), include and specify or describe those to whom the Rule 23(c)(2) notice was directed, who have not requested exclusion, and whom the court finds to be class members.

(4) ***Particular Issues.*** When appropriate, an action may be brought or maintained as a class action with respect to particular issues.

(5) ***Subclasses.*** When appropriate, a class may be divided into subclasses that are each treated as a class under this rule.

INTERESTS OF *AMICI CURIAE*[1]

AARP is a non-partisan, non-profit organization dedicated to representing the needs and interests of people age fifty and older. AARP is greatly concerned about fraudulent, deceptive and unfair business practices, many of which disproportionately harm older people. AARP thus supports laws and public policies designed to protect older people from such business practices and to preserve the legal means for them to seek redress. Among these activities, AARP advocates for improved access to the civil justice system and supports the availability of the full range of enforcement tools, including class actions.

A significant percentage of the investing public in the United States' markets is comprised of members of the age fifty and older population. Older persons are frequent targets of financial fraud because they often have significant assets and they look for investment opportunities that will supplement Social Security and other sources of retirement income. As a result, AARP has elevated the need to combat securities fraud and made this issue a high priority. The Association has regularly commented on legislative and regulatory proposals that address investment fraud, filed *amicus* briefs in

---

[1] In accordance with this Court's Rule 37.6, no party's counsel wrote this brief in whole or in part and no person other than amici or their counsel made a monetary contribution intended to fund the preparation or submission of the brief. The parties' letters consenting to the filing of this brief have been lodged with the Clerk of the Court.

cases involving the securities laws, and opposed legislative efforts to limit the remedies of defrauded investors.

The North American Securities Administrators Association, Inc. ("NASAA") is the non-profit association of state, provincial, and territorial securities regulators in the United States, Canada, and Mexico. It has sixty-seven (67) members, including the securities regulators in all fifty (50) states, the District of Columbia, Puerto Rico, and the U.S. Virgin Islands. Formed in 1919, NASAA is the oldest international organization devoted to protecting investors from fraud and abuse in the offer and sale of securities.

NASAA's members are responsible for regulating securities transactions under state law, and their principal activities include registering local securities offerings; licensing the brokers and investment advisers who sell securities or provide investment advice; and initiating enforcement actions to address fraud and other misconduct. They are intimately familiar with the investment offerings and sales abuses confronting their state residents on a daily basis.

NASAA supports all of its members' activities and it appears as amicus curiae in important cases involving securities regulation and investor protection. Recognizing that private actions are an essential complement to governmental enforcement of the securities laws, NASAA and its members also support the rights of investors to seek redress in

court for investment-related fraud and abuse. NASAA and its members have an interest in this appeal because it will profoundly affect the ability of investors to seek redress in cases where unscrupulous companies and individuals seek to cloak their fraudulent acts through perverse uses of the corporate form.

The resolution of this case will have a significant impact on the integrity of the securities markets and the remediation of securities fraud in those markets. This is of particular concern at this time, to both AARP and NASAA, given the entry of many first-time investors into the market and the responsibility for retirement investing that pensioners have had to assume as a result of the shift in the retirement plan paradigm from defined benefit pension plans (under which employers bear the risk of loss) to defined contribution pension plans (under which plan participants bear the risk of loss).

SUMMARY OF ARGUMENT

Securities fraud litigation initiated by private parties under the U.S. Securities and Exchange Commission's Rule 10b-5, 17 C.F.R. § 240.10(b) ("Rule 10b-5"), serves as an essential means of protecting the integrity of the securities markets for investors, maintaining investor confidence in the markets, and making victims whole. The Fifth Circuit's loss causation requirement, however, undermines private securities actions in contravention of *Basic v. Levinson*, 485 U.S. 224 (1988) and Congress' support for such litigation.

Basic serves to aid plaintiffs seeking class certification under Federal Rule of Civil Procedure 23(b)(3) ("Rule 23") by providing them the fraud-on-the-market presumption to demonstrate reliance as a class and satisfy the predominance requirement. The Fifth Circuit's approach contravenes this Court's underlying rationale and establishes a substantial hurdle to certification in many cases by requiring the plaintiff to demonstrate loss causation prior to relying on this presumption. The Circuit mistakenly relies on *Basic*, however, because loss causation focuses on the effects of the defendant's conduct and not on each potential member of the class and is therefore wholly different from reliance.

Moreover, the Fifth Circuit's holding undermines private securities litigation by adding loss causation as a prerequisite for class certification when it is not part of the plain language of Rule 23. Further, Congress in its lawmaking has recognized the interests that must be balanced in facilitating private securities litigation and plainly addressed these interests through the Private Securities Litigation Reform Act of 2005 ("PSLRA"), 15 U.S.C. 78u-4 (2006), and the Securities Litigation Uniform Standards Act ("SLUSA"), 15 U.S.C. § 78a (2006). The Fifth Circuit's loss causation requirement tampers with the balance struck in these statutes and implements a hurdle that Congress chose not to enact.

Therefore, as a result of the importance of Rule 10b-5 and the unavailability of alternative remedies under state law, the Fifth Circuit's

requirement that a plaintiff demonstrate loss causation by a preponderance of the evidence at the certification stage will have a deleterious result on private securities litigation, leaving investors unprotected.

ARGUMENT

The Fifth Circuit's requirement that the named plaintiff prove loss causation by a preponderance of the evidence prior to class certification creates an insurmountable hurdle that will close the door to the private securities actions that Congress embraced under Section 10(b) of the Securities and Exchange Act of 1934 and the U.S. Securities and Exchange Commission ("Commission") implemented through Rule 10b-5.

I. RULE 10b-5 PROVIDES PLAINTIFFS THE OPPORTUNITY TO BRING PRIVATE SECURITIES LITIGATION.

Congress' intention to provide individual investors private rights of action in securities frauds claims is manifest throughout the federal securities law. Section 10(b) of the Securities and Exchange Act of 1934 makes it unlawful to violate the rules promulgated by the Commission. *See* 15 U.S.C. § 78j(b). In turn, Rule 10b-5 provides that it is unlawful, during the sale or purchase of a security, for an issuer to "make any untrue statement of a material fact or to omit to state a material fact necessary in order to make the statements made, in

light of the circumstances under which they were made, not misleading." *See* 17 C.F.R. § 240.10b-5(b).

In order to prove a violation of Rule 10b-5, a party must demonstrate (1) the presence of a material misrepresentation or omission; (2) the defendant's scienter; (3) a connection between the misrepresentation or omission and the transaction involving the security; (4) a plaintiff's reliance on the misrepresentation or omission; (5) a plaintiff's economic loss; and (6) a causal connection between the misrepresentation or omission and the plaintiff's loss. *See Dura Pharms., Inc. v. Broudo* (*Dura*), 544 U.S. 336, 341 (2005). Because Rule 10b-5 does not specify these elements, *see* 17 C.F.R. 240.10b-5(b), this Court has taken the initiative for detailing the requirements of proving a violation of Rule 10b-5, *see* Matthew L. Fry, *Pleading and Proving Loss Causation in Fraud-on-the-Market-Based Securities Suits Post*-Dura Pharmaceuticals, 36 Sec. Reg. L.J. 31, 33 (2008).

Rule 10b-5 creates a private right of action. *See Dura*, 544 U.S. at 341, 345 (recognizing the importance of the private right of action in securities cases and explaining their role in maintaining public confidence and deterring fraud). This private right of action is often pursued by a class certified pursuant to Federal Rule of Civil Procedure 23 ("Rule 23"). Successful certification of a class under Rule 23 requires the named plaintiff to show numerosity, commonality, and adequacy of representation. Further, the named plaintiff must demonstrate that her claim falls within Rule 23(b).

The named plaintiff in this case seeks to demonstrate that its suit falls within Rule 23(b)(3), Pet. Mot. For Class Certification 8-9 (Sept. 17, 2007), which provides for class certification when "the questions of law or fact common to class members predominate over any questions affecting only individual members, and that a class action is superior to other available methods for fairly and efficiently adjudicating the controversy," Fed. R. Civ. P. 23(b)(3).

This Court embraced the importance of certified classes pursuing private causes of action under Rule 10b-5 and made such classes more feasible through its holding in *Basic*, 485 U.S. at 241. Because reliance, unlike any of the other factors in a Rule 10b-5 claim, is specific to each member of the class, this Court aided the ability of plaintiffs to demonstrate a common question of fact under Rule 23(b) by allowing them to establish a presumption of reliance, rather than having them demonstrate reliance for each member of the proposed class. *See id.* To establish this presumption, the plaintiff must demonstrate (1) the alleged misrepresentations were made publicly by the defendant; (2) the shares at issue were traded in an efficient market; and (3) the trading of shares took place in the time between when the misrepresentations were made and the truth was revealed. *See Basic*, 485 U.S. at 241-42.

This presumption does not apply to the other factors for a Rule 10b-5 violation. Unlike the issue of whether a particular plaintiff relied on the

defendant's misstatement or omission, in the context of the other elements of a Rule 10b-5 claim the plaintiff's reliance is irrelevant because the elements of a Rule 10b-5 inquiry revolve around the defendant's conduct and its effect on the market. Nevertheless, despite the inapplicability of *Basic*'s presumption as to the other elements of a Rule 10b-5 claim, the Fifth Circuit and the Respondent seek to apply this Court's analysis to the loss causation factor. *See Archdiocese of Milwaukee Supporting Fund, Inc. v. Halliburton Co.* ("*AMSF*"), 597 F.3d 330, 335 (5th Cir. 2010); Joint Brief of the Appellees Halliburton Company and David J. Lesar at 18, *AMSF*, 597 F.3d 330 (5th Cir. 2010). This use of the *Basic* holding not only reverses this Court's attempt to facilitate more efficient class certification in the Rule 10b-5 context, but also builds a restrictive wall around class certification. Significantly, rather than walling off class certification, as is the result of the Fifth Circuit's approach, *Basic* represents the importance this Court places on facilitating class certifications, which allow plaintiffs the opportunity to prove their Rule 10b-5 claim on its merits.

II. PRIVATE SECURITIES LITIGATION SERVES A CRUCIAL ROLE IN THE ENFORCEMENT OF THE SECURITIES LAWS, MAINTAINING INVESTOR CONFIDENCE, AND MAKING VICTIMS WHOLE.

Securities fraud litigation initiated by private parties is an essential means of enforcing the securities laws and protecting the integrity of the securities markets for investors and maintaining investor confidence in the markets. The limited

resources of the Commission are selectively employed and are seldom directed at making securities fraud victims whole. *See* Brief of the United States as Amicus Curiae Supporting Respondents at 1, *Merck & Co., Inc. v. Reynolds*, 130 S. Ct. 1784 (2010) (recognizing the importance of private securities litigation as a supplement to the Commission's criminal and civil enforcement actions); Brief for the Securities and Exchange Commission as Amicus Curiae in Support of Partial Affirmance at 6, *Herman & MacLean v. Huddleston*, 459 U.S. 375 (1983).

Consequently, the answer to the questions presented in this case will have immediate and potentially serious repercussions for the civil enforcement of securities law violations in this country, especially as they relate to Rule 10b-5. As financial crimes abound and alternative forums for aggrieved investors remain limited, it is especially important that the federal courts interpret federal law in a way that, to the extent possible, affords meaningful remedies to victims of securities fraud. This Court's reversal of the Fifth Circuit's holding will help accomplish this objective by fulfilling the standards articulated in Rule 10b-5 and providing plaintiffs a source of relief not otherwise available under state law.

A. This Court and Congress Have Emphasized the Importance of Private Securities Litigation in Deterring and Redressing Securities Fraud.

The Court has long recognized the vital importance of legitimate private securities litigation to the federal enforcement regime for securities fraud. *See, e.g., Lampf, Pleva, Lipkind, Prupis & Petigrow v. Gilbertson*, 501 U.S. 350 (1991); *Pinter v. Dahl*, 486 U.S. 622 (1988); *Bateman Eichler, Hill Richards, Inc. v. Berner*, 472 U.S. 299, 310 (1985) (observing that "implied private actions are a most effective weapon in the enforcement of the securities laws"); *J.I. Case Co. v. Borak*, 377 U.S. 426, 432 (1964). *See also Blue Chip Stamps v. Manor Drug Stores*, 421 U.S. 723, 730 (1975) (stating that "private enforcement" of Rule 10b-5 is "a necessary supplement to Commission action"). In these and other decisions, the Court has recognized a strong Congressional policy of favoring private actions as a means of achieving the fundamental goals of our securities laws: fraud deterrence, victim compensation, and the promotion of investor confidence.

As a deterrent, private securities actions are essential to inspiring compliance with securities laws. As the Commission has explained, "given the limited enforcement resources of the Commission, the private right of action is vital to effective enforcement of Section 10(b)." See Brief for the Securities and Exchange Commission as Amicus

Curiae in Support of Partial Affirmance, *supra*, at 6. Former SEC Chairman David Ruder noted in 1989 that in earlier years less than ten percent of cases involving securities or commodities had been brought by the government. *See* David S. Ruder, *The Development of Legal Doctrine through Amicus Participation: The SEC Experience*, 1989 Wis. L. Rev. 1167, 1168.

William R. McLucas, former Director of the Commission's Enforcement Division, has argued that the private right of action under §10(b) and Rule 10b-5 is necessary to supplement federal enforcement of securities laws, based on "the continued growth in the size and complexity of our securities market, and the absolute certainty that persons seeking to perpetuate financial fraud will always be among us." *Private Litigation of the Federal Securities Laws: Hearings Before the Subcomm. on Securities of the Senate Comm. on Banking Housing & Urban Affairs*, 103d Cong., 1st Sess. 113 (June 17, 1993) [hereinafter *Hearings*] (testimony of William R. McLucas). Government agencies are generally strangers to the transactions that give rise to allegations of fraud. Private participants in allegedly fraudulent transactions thus have an informational advantage over government agencies and have stronger incentives to prosecute certain alleged frauds because they stand to profit from any recovery.

Statistics show that "private enforcement . . . dwarf[s] public enforcement," and thus private litigants are much more successful in terms of

recovery than the Commission. John C. Coffee, Jr., *Reforming the Securities Class Action: An Essay on Deterrence and Its Implementation*, 106 Colum. L. Rev. 1534, 1542-43 tbls. 2 & 3 (2006). In fact, "even in major scandals where the [Commission] has brought its own action, the damages paid in securities class actions are usually (but not always) a multiple of those paid to the [Commission]." *Id.* Private actions are also able to reach a much broader range of perpetrated frauds. The Congressional mandate and funding for the Commission only allows it to prosecute the most flagrant abuses of securities laws. The Commission "does not have the resources to investigate every instance in which a public company's disclosure is questionable," an issue that would "continue to be the case even if the Commission's resources were substantially increased." *Berner v. Lazzaro*, 730 F.2d 1319, 1322-23 (9th Cir. 1984). *See also* H.R. Rep. No. 355, 98th Cong., 1st Sess., at 6 (1983) ("In recent years, the securities markets have grown dramatically in size and complexity, while Commission enforcement resources have declined."). Nowhere have the limits of the Commission's abilities to stop and prevent fraud been more apparent than the case of Bernard Madoff, who managed to operate a Ponzi scheme for nearly half a century in spite of continuous oversight from the Commission. Further, probing violations in the mutual fund industry has not been a top priority for the Commission. Marcia Vickers, Commentary, *How Eliot Spitzer Makes the SEC Look Stodgy*, Businessweek (Sept. 15, 2003), *available at* http://www.business week.com/magazine/content /03_37/b384 9047.htm ("The real failure has been on

the enforcement side. The SEC has done nothing to show that it really means business.").

Private enforcement actions are also an essential tool in compensating victims. Private actions afford victims of fraud the best and often only hope of recovering their losses, something for which government enforcement actions are ill equipped. As the Commission has explained,

> When the Commission files an enforcement action, its principal objectives are to enjoin the wrongdoer from future violations of the law, to deprive violators of their profit by seeking orders of disgorgement, and generally to deter other violations by seeking civil money penalties. Although the Commission usually makes disgorged funds available for the compensation of injured investors, the amount of investor losses often exceeds the wrongdoer's ill-gotten gains. Private actions, by contrast, enable defrauded investors to seek compensatory damages and thereby recover the full amount of their losses.

Hearings, *supra*, at 113.

Thus, while the Commission may seek monetary relief, its remedies are designed primarily to deter violations by making them unprofitable, rather than to make investors whole. And with good reason: the

damages in major securities fraud cases can and often do run into the billions of dollars. *See, e.g.*, *Regents of the Univ. of California v. Credit Suisse First Bos.*, 482 F.3d 372, 379 (2007); *In re Global Crossing*, 225 F.R.D. 436, 460 (2004); *see also* Coffee, *supra*, at 1555 (cataloguing settlement amounts in major securities fraud cases).

Accordingly, the primary means of compensating injured investors remains the private action. Finally, and especially important in our current financial downturn, private securities litigation performs a significant role in maintaining investor confidence by enforcing the mandatory disclosure system. As this Court recently noted, "The magnitude of the federal interest in protecting the integrity and efficient operation of the market for nationally traded securities cannot be overstated." *Merrill Lynch, Pierce, Fenner & Smith Inc. v. Dabit*, 547 U.S. 71, 78 (2006). Investor confidence in the integrity of the securities markets is crucial to helping businesses raise the capital they need to expand and keep the lights on. *See Basic*, 485 U.S. at 235 n.12 (1988). If investors are prevented from holding corporate actors accountable for their frauds, investors will be far less willing to participate in our securities markets. *See Hearings*, *supra*, at 145.

B. Rule 10b-5 Represents the Petitioner's Only Source of Redress Because of Federal Limitations on Securities Fraud Claims Based on State Law.

The need to insure that investors have meaningful remedies in federal court is all the more important when state law does not provide an alternative remedy. This is especially true for securities fraud cases in light of the fact that "federal law, not state law has long been the principal vehicle for asserting class-action securities fraud claims." *Dabit*, 547 U.S. at 88. Furthermore, this Court has observed that the disadvantages posed by a restrictive interpretation of federal securities law can be "attenuated" where adequate remedies are available under state law. *See Blue Chip Stamps*, 421 U.S. at 738 n.9 (weighing fact that class action in state court was an alternative remedy); *see also Santa Fe Industries, Inc. v. Green*, 430 U.S. 462, 478 (1977) (state cause of action under corporate law was a factor in determining whether to recognize federal cause of action); *J.I. Case Co.*, 377 U.S. at 434-35 (1964) (noting that if federal jurisdiction is limited and state affords no relief, then the "whole purpose" of the statutory provision might be frustrated). Conversely, where state law does not offer a significant alternative forum for plaintiffs' claims, there is a correspondingly greater justification—and need—for the federal courts to afford relief.

In this case, state law offers limited recourse for investors in the Petitioner's position, as Congress

has expressly limited the use of class action suits seeking recovery for securities fraud under state law. In 1998, Congress enacted SLUSA to address the concern that "securities class action lawsuits [had] shifted from Federal to state courts" as a means of circumventing the Reform Act. *See* 15 U.S.C. § 78a (findings set forth in Pub L. 105-353, § 2, Nov. 3, 1998). With certain exceptions, SLUSA provides that no class action based upon state law may be maintained in any state court on behalf of more than 50 class members. *See id.* § 77p(b). Moreover, state courts generally have not recognized the doctrine of fraud-on-the-market in cases seeking relief under state common law—a doctrine central to Petitioner's case—further limiting the state courts as an alternative forum for investors aggrieved by misconduct of the sort alleged in this case. *See, e.g.*, *Peil v. Speiser*, 806 F.2d 1154, 1163 (3rd Cir. 1986) (noting that no states have adopted fraud on the market theory); *Kaufman v. i-Stat Corp.*, 754 A.2d 1188, 1193-94 (N.J. 2000); *Mirkin v. Wasserman*, 858 P.2d 568, 584 (Cal. 1993).

Precisely because of the massive corporate frauds that have surfaced in recent years, some courts have recognized the need to re-evaluate barriers to civil actions alleging securities fraud. The California Supreme Court, for example, has cited the troubling increase in corporate fraud as a reason to recalibrate the balance between the interests of investors and the interests of corporations, in favor of providing greater judicial recourse to victims of fraud. The court explained that

When Congress enacted the Private Securities Litigation Reform Act of 1995 and the Uniform Standards Act of 1998, it was almost entirely concerned with preventing non-meritorious suits. But events since 1998 have changed the perspective. The last few years have seen repeated reports of false financial statements and accounting fraud, demonstrating that many charges of corporate fraud were neither speculative nor attempts to extort settlement money, but were based on actual misconduct. To open the newspaper today is to receive a daily dose of scandal, from Adelphia to Enron and beyond. Sadly, each of us knows that these newly publicized instances of accounting-related securities fraud are no longer out of the ordinary, save perhaps in scale alone. The victims of the reported frauds, moreover, are often persons who were induced to hold corporate stock by rosy but false financial reports, while others who knew the true state of affairs exercised stock options and sold at inflated prices. Eliminating barriers that deny redress to actual victims of fraud now assumes an importance equal

> to that of deterring non-meritorious suits.

See Small v. Fritz Companies, Inc., 65 P. 3d 1255, 1263-64 (Cal. 2003) (internal citations and quotation marks omitted).

III. THE FIFTH CIRCUIT'S REQUIREMENT OF PROVING LOSS CAUSATION CUTS AGAINST THIS COURT'S PRECEDENT, CONGRESS' ENACTMENT OF SECURITIES FRAUD REMEDIAL PROVISIONS UNDER SECTION 10(B), AND THE SEC'S REGULATORY AUTHORITY EXPRESSED IN RULE 10b-5.

The Fifth Circuit's requirement that plaintiffs demonstrate loss causation by a preponderance of the evidence prior to class certification mistakenly relies on this Court's precedent in *Basic* and undermines Court precedent, Congressional enactment, and regulatory rulemaking.

A. The Fifth Circuit's Loss Causation Requirement Contravenes this Court's Holding in *Basic*.

By requiring the plaintiff to prove loss causation when demonstrating the common issues of law and fact under Rule 23(b)(3), the Fifth Circuit's holding erects a substantial hurdle in contravention of this Court's recognition of the importance of private securities fraud causes of action. *See AMSF*, 597 F.3d at 344. The Circuit does not explicitly require loss causation as a condition for Rule 23

certification. Instead, the holding below cloaks the proof hurdle as a prerequisite to relying on *Basic*'s fraud on the market presumption. *See Oscar Private Equity Invs. v. Allegiance Telecom, Inc.*, 487 F.3d 261, 265 (5th Cir. 2007) (holding that "we require plaintiffs to establish loss causation in order to trigger the fraud-on-the-market presumption.").

Because a plaintiff seeking to use *Basic*'s reliance presumption must first demonstrate loss causation, the Circuit's requirement directly contravenes this Court's underlying rationale in *Basic*, which aimed to aid rather than hinder plaintiffs seeking to certify a class in Rule 10b-5 actions. *Basic* provides the fraud-on-the-market presumption as a result of the difficulty of proving reliance for each individual class member. Loss causation, however, does not share this characteristic. Specifically, because loss causation focuses on the defendant and not the plaintiffs, it is different from the reliance factor and consequently is necessarily irrelevant to Rule 23 considerations. Unlike reliance, loss causation is necessarily common to all plaintiffs because it focuses merely on whether the defendant's conduct caused a change in the market. The number or type of plaintiff is irrelevant in this consideration. Therefore, while the presence of loss causation may be important in the context of a motion to dismiss, a motion for summary judgment, or a trial, such a consideration is irrelevant when the court evaluates whether plaintiffs share common issues of law or fact under Rule 23(b)(3). Thus, without legal or logical warrant, the Circuit's holding requires plaintiffs to

undertake a merits inquiry not related to class certification prior to having access to full discovery.

Despite the irrelevance of loss causation in determining the existence of common issues of fact, the Fifth Circuit reaffirmed this considerable burden in this case without providing any additional rationale except for reliance on the Circuit's previous holding in *Oscar*. No other circuit has adopted the Fifth Circuit's approach. For instance, the Second Circuit implicitly rejects the requirement that plaintiffs demonstrate loss causation at the certification stage. *See In re Salomon Analyst Metromedia Litigation*, 544 F.3d 474, 483 (2d Cir. 2008). More recently, a unanimous panel of the Seventh Circuit dismissed the loss causation requirement at the certification stage explaining that the Fifth Circuit's requirement "represents a go-it-alone strategy" that "would make certification impossible in many securities suits." *See Schleicher v. Wendt*, 618 F.3d 679, 686-87 (7th Cir. 2010). Writing for the court, Judge Easterbrook recognized that requiring plaintiffs to establish loss causation at the certification stage would cause the circuit to essentially "jettison the fraud-on-the-market exception" established by this Court under *Basic*. *See id.* at 683.

In addition to contravening the underlying rationale in *Basic*, the Fifth Circuit's requirement that the plaintiff establish loss causation at the certification stage creates an impermissible hurdle in two concrete ways. First, the named plaintiff must demonstrate loss causation prior to having the

benefit of discovery – a substantial burden, to be sure! Second, in addition to requiring that the plaintiff demonstrate loss causation at a very early stage in the litigation, the plaintiff makes her proof by a preponderance of the evidence. In sum, under the Circuit's loss causation requirement, the named plaintiff must prove by a preponderance of the evidence that the defendant's misrepresentation or omission caused her loss, and consequently the losses of everyone in the class, without the benefit of full discovery. It may be fairly observed that the burdens imposed by the Fifth Circuit's scheme amount to no less than the plaintiff having to make her entire case on the merits at the class certification stage. *See Schleicher*, 618 F.3d at 686-87 (explaining that requiring loss causation at the class certification stage "gets the cart before the horse" and "make[s] certification impossible in many securities suits").

The court below implicitly concedes the difficulty with the proof burden its analysis imposes and explains that the "showing of loss causation is a 'rigorous process' and requires both expert testimony and analytical research or an event study." *See AMSF*, 597 F.3d at 341. Further, the evidence on which the plaintiff must rely in satisfying this burden is becoming considerably more difficult to acquire. Previously, the Fifth Circuit accepted proof of causation based on "public data and public records." *See Oscar Private Equity Invs.*, 487 F.3d at 267. In the present case, however, the Circuit increases the difficulty of proving causation by requiring the plaintiffs to rely on evidence specific to

the defendant. *See AMSF*, 597 F.3d at 338. In particular, rather than relying on third-party analysis of the defendant's conduct in the market to demonstrate causation, the court held that the plaintiffs must focus on the scienter of the defendant and "prove the corrective disclosure shows the misleading or deceptive nature of the prior positive statements" and that "the corrective disclosure more probably than not shows that the original estimates or predictions were designed to defraud." *See AMSF*, 597 F.3d at 338. The rigor of the showing required of the plaintiff at the class certification stage is unique in the circuits, and it is unsupported by applicable law.

This substantial burden of proof results in the trial of Rule10b-5 claims on the merits before discovery is substantially completed or even underway. For instance, in the present case, the plaintiff sought certification at approximately six months into discovery proceedings. *See* Brief of Petitioner at 14, *Erica P. John Fund v. Halliburton Co.*, No. 09-1403 (2010). Further, although the plaintiff in this case had the benefit of some discovery, lower courts in the Fifth Circuit have already begun to refuse the requests of plaintiffs to allow more discovery before having to prove loss causation by a preponderance of the evidence. *See, e.g., In re TETRA Technologies, Inc. Securities Litigation*, No. 4:08-cv-0965, 2010 U.S. Dist. LEXIS 33012, at *9 (S.D. Tex. Apr. 5, 2010) (finding that the plaintiffs are not "entitled by law to additional merits discovery prior to submitting their expert report and seeking class certification"). This result

directly contravenes this Court's rationale in *Basic* and imposes severe restrictions on class certification under Rule 10b-5.

B. The Fifth Circuit's Loss Causation Requirement Undermines the Congressional Initiative Expressed In Section 10(b) and the SEC's Regulatory and Enforcement Follow-Up in Rule 10b-5.

This Court, Congress and the SEC embrace the importance of private securities litigation. *See* 15 USCS § 78u-4 (detailing the requirements for a private right of action under the Securities and Exchange Act of 1934); *Dura*, 544 U.S. at 341 (describing the private right of action available under the Securities and Exchange Act of 1934); 17 C.F.R. 240.10b-5. Through Rule 23 Congress and this Court determined the elements for class certification. In enacting the PSLRA and SLUSA Congress provided additional requirements for private securities litigation. These requirements, however, represent the full extent of the hurdles that plaintiffs must overcome in order to certify a class under Section 10(b) and the related Rule 10b-5 and Rule 23. As such, the Fifth Circuit exceeded its judicial power in setting a higher bar. It is beyond argument that additional restrictive measures, such as the need to prove loss causation during class certification under Rule 10b-5, directly contravene Congress' intent by creating requirements that Congress itself omitted from its enactments. The Fifth Circuit's erection of these additional hurdles

beyond the terms of Rule 23 and the PSLRA is unsustainable under the law.

First, a named plaintiff seeking to certify a class must satisfy the requirements of Rule 23. Rule 23 has never stood as an insurmountable bar for plaintiffs by requiring a trial on the merits before discovery is complete and the courts venture out of their proper bounds in erecting such a hurdle. *See Amchem Prods. v. Windsor*, 521 U.S. 591, 620 (1997) (explaining in the context of Rule 23 that "[c]ourts are not free to amend a rule outside the process Congress ordered."). The Fifth Circuit's loss causation requirement, however, contravenes the generally understood and previously accepted operative plan of Rule 23 by requiring a series of "mini-trials on the merits of cases at the class certification stage." *Oscar*, 487 F.3d at 272 (Dennis, J., dissenting). Rather than permitting the erection of hurdles not previously recognized, this Court should focus on the plain language of Rule 23 and consider whether the plaintiffs satisfied the requirements of the Rule as interpreted by *Basic*. *See Eisen v. Carlisle & Jacquelin*, 417 U.S. 156, 177-78 (1974).

Second, Congress struck a balance between the various interests in private securities litigation through the PSLRA and SLUSA. In order to address abuses that arose in such actions, Congress changed the pleading standards for scienter and misrepresentation, but remained silent with regard to the loss causation requirement. *See* Fry, *supra*, at 33; *see also Schleicher*, 618 F.3d at 686 (explaining

that Congress already addressed private securities reform by "requir[ing] more at the pleading stage and to ensur[ing] that litigation occurs in federal court). Despite the heightened pleading requirements, this Court recognized the balance that Congress struck and explained that "[n]othing in the PSLRA . . . casts doubt on the conclusion 'that private securities litigation is an indispensable tool with which defrauded investors can recover their losses'-a matter crucial to the integrity of domestic capital markets." *See Tellabs, Inc. v. Makor Issues & Rights, Ltd.*, 551 U.S. 308, 321 n.4 (2007) (*quoting Merrill Lynch, Pierce, Fenner & Smith Inc. v. Dabit*, 547 U.S. 71, 81 (2006) (internal quotation marks omitted)).

As such, at the height of reform of private securities litigation, Congress continued to recognize the importance of private securities actions and declined to change the pleading standard for loss causation much less suggest that plaintiffs prove it by a preponderance of the evidence during class certification proceedings. Further, Congress recognized that the heightened pleading standards it created in the PLSRA unintentionally undercut private securities litigation and responded by enacting the SLUSA to help facilitate easier class certification. Nevertheless, the Fifth Circuit seeks to add the loss causation element to reform actions under Section 10(b) and the related Rule 10b-5 in a way that Congress and the Commission did not envision.

Lastly, adding the loss causation requirement cuts against the Securities Act of 1934, as well as the PSLRA and SLUSA, by creating a loophole for dishonesty. In particular, issuers will be able to hide behind a smoke screen of unrelated information to shroud the effect of releasing the details about a prior misstatement or omission. *See* Tad E. Thompson, Recent Development, *Messin' with Texas: How The Fifth Circuit's Decision in* Oscar Private Equity *Misinterprets The Fraud-on-the-Market Theory*, 86 N.C. L. Rev. 1086, 1095-96 (2008); *see also Schleicher v. Wendt*, 618 F.3d 679, 686 (7th Cir. 2010) (explaining that the Fifth Circuit's approach "would make certification impossible in many securities suits, because when true and false statements are made together it is often impossible to disentangle the effects with any confidence"). So long as any misstatement or omission is made in conjunction with unrelated, but accurate, information, plaintiffs will experience significant difficulty in demonstrating loss causation. This loophole becomes especially apparent when it arises early in discovery and the plaintiff must prove causation by a preponderance of the evidence. In such a situation, the plaintiff will not have the necessary information to differentiate between statements of the issuer that caused loss and those deviously designed to cloud the situation. *See* Thompson, *supra*, at 1095-96. This loophole cuts directly against the Securities Act of 1934, by means of which Congress intended to encourage issuers to provide open, full, and honest information in the sale and purchase of securities. *See* H.R. Rep. No. 73-1383, at 11 (1934) (explaining that the Act was

meant to promote fair and honest markets by encouraging full disclosure).

CONCLUSION

For all of the foregoing reasons, *amici* respectfully submit that the decision of the Fifth Circuit should be reversed.

INTEREST OF *AMICUS CURIAE*[1]

The American Institute of Certified Public Accountants ("AICPA") is the national organization of the certified public accounting profession with more than 350,000 members involved in public accounting, business and industry, government and academia. Its members involved in public accounting and their firms audit the financial statements of virtually every public company in the United States, and thus they are often drawn into securities litigation involving issues such as those presented in this case.

Although no member of the AICPA is involved in this case, the standards governing class certification decisions are of immense interest to the profession that the AICPA represents. As this Court has observed, the *in terrorem* effect of class certification is considerable. Curbing that effect in frivolous class actions was one of the main reasons that Congress passed the Private Securities Litigation Reform Act in 1995. That Act not only heightened pleading standards, but made clear that investors must prove loss causation to be successful in a Rule 10b-5 lawsuit.

The firms of AICPA members (as well as officers, directors and other professionals) are frequently named as defendants in securities litigation when investors allege that the audit report issued on a public company's financial

---

1. Pursuant to Rule 37.6, *amicus* affirms that no counsel for a party authored this brief in whole or in part, and that no person other than *amicus* and its counsel made a monetary contribution to the preparation or submission of this brief. The parties have filed letters giving blanket consent to the filing of amicus briefs in this case.

statements was false and misleading and thereby violated Section 10(b) of the Securities Exchange Act and Rule 10b-5. A fair number of these allegations survive a motion to dismiss despite the heightened pleading requirements of the Private Securities Litigation Reform Act of 1995. Although the auditors and the other defendants might well defeat the surviving allegations at a later stage of the proceedings (*e.g.*, summary judgment after discovery, or trial), the economic and reputational costs of reaching that point are extraordinarily high and the risk enormous where there is judicial certification of a large class of investors. The risk will be compounded by (i) the fact that many AICPA members (and their firms) audit in any given year the financial statements of many public companies and (ii) the possibility that a public company will declare bankruptcy and thus potentially shift its financial exposure to other defendants.

Further, certification based upon a presumption will invariably cause disclosures (assuming the class action claims are material to the financial statements) that would not have otherwise been made. AICPA members who work as internal accountants for public companies, as well as AICPA members who serve as public company auditors, must consider the adequacy of public litigation contingency reporting, a task made more problematic by class certification. Certification necessarily creates an *in terrorem* effect that is exponentially magnified when companies are called upon, as they are by accounting standards, to disclose the risk in their financial statements and other public reporting. Accordingly, certifying a class, in many instances, can result in a company disclosing a substantial loss contingency which by itself can have a direct impact on the purchase and sale decisions of stock

market investors. A rule that permits a more studied decision regarding whether a class should be certified would allow companies to avoid unnecessary fluctuations in their stock price.

For all these reasons, the AICPA, on behalf of its members, therefore has a keen interest in assuring that its members and their firms, as well as all others involved in the financial reporting process, are able to raise, and have considered before the class certification decision is made, challenges to the underlying assumptions required for class treatment of a Rule 10b-5 case.

Considering at an early litigation stage issues related to whether alleged misrepresentations actually moved the market price would ensure that classes are certified only when those assumptions are valid. This would: (i) save judicial time and resources; (ii) save costs for all parties; (iii) better align litigation costs with real litigation risks; (iv) improve the financial accounting of public companies; and (v) control the *in terrorem* and adverse reputational effects of class actions and mitigate the tendency to file strike suits. That those early stage challenges may touch upon aspects of the loss causation or materiality element of an investor's claim in no way supports precluding defendants from seeking to protect themselves from the unjustifiable costs of erroneous class certification decisions.

SUMMARY OF ARGUMENT

This Court allowed trial courts to grant investors, for purposes of class certification, a rebuttable presumption of reliance based on the fraud-on-the-market theory. *Basic v. Levinson*, 485 U.S. 224 (1988). Such a presumption allows class representatives to avoid proving that each class member relied on the alleged material misrepresentations.

A presumption based on the fraud-on-the-market theory depends on the premise that the alleged material misrepresentations moved the market price for the security. Thus, when investors invoke that theory to support class actions brought under Rule 10b-5, the class certification decision rests on the validity of that premise. Evidence regarding whether the alleged misrepresentations actually moved the market – either at the time they were made or at the time of their alleged correction – is central to whether a fraud-on-the-market based reliance presumption should be applied.

Whether submitted by investors in an effort to show that a reliance presumption applies, or by defendants in an effort to rebut that presumption, nothing within Rule 23 or this Court's jurisprudence, including *Eisen v. Carlisle & Jacquelin*, 417 U.S. 156 (1974), precludes a trial court's consideration, at the class certification stage, of evidence regarding whether an alleged misrepresentation moved the market price. Such evidence is publicly available, and a claimed need for discovery cannot justify forcing defendants to wait until trial to submit evidence that, if sufficient to rebut the presumption, would mean that class certification was improper in the first instance.

The AICPA urges this Court not to impose a prohibition on defendants' ability to protect themselves by rebutting, at the class certification stage, a fraud-on-the-market based reliance presumption. Indeed, such a prohibition would be inconsistent with the recent revisions to Rule 23. Where defendants' evidence is not sufficient to rebut the presumption, class actions will continue to be certified. Where it is sufficient, however, defendants may be relieved of the unjustifiable costs and risks associated with an erroneous class certification decision.

ARGUMENT

I. When Investors Invoke The Fraud-On-The-Market Theory, They Inject A Merits-Related Issue Into The Class Certification Decision

This Court has held, and reaffirmed, that reliance is an element of a Rule 10b-5 claim. *Stoneridge Investment Partners, LLC v. Scientific-Atlanta, Inc.*, 552 U.S. 148, 159 (2008); *Dura Pharms., Inc. v. Broudo*, 544 U.S. 336, 341-42 (2005); *Basic, Inc. v. Levinson*, 485 U.S. 224, 243 (1988). Tied to causation, the reliance element ensures that an investor cannot recover if he would have made the same investment decision with or without the alleged misrepresentation, *Stoneridge*, 522 U.S. at 159; *see also id.* at 160 ("[R]eliance is tied to causation, leading to the inquiry whether respondents' acts were immediate or remote to the injury."), or that the loss would have been incurred in spite of it.

But proving that each putative class member actually relied on an alleged misrepresentation would mean that "individual questions. . . would . . . overwhelm[] common

ones[,]" *Basic*, 485 U.S. at 242, rendering class actions in Rule 10b-5 cases virtually impossible. Thus, the Court's decision in *Basic* allows a district court to apply a rebuttable presumption of reliance, based on the fraud-on-the-market theory, to permit the investor to meet the predominance requirement of Rule 23(b)(3).

The presumption at issue in *Basic* depends on a hypothesized connection between a defendant's public statements and the price of a share of stock. The efficient market hypothesis – which underlies the fraud-on-the-market theory – posits that in open and developed securities markets, professional investors evaluate new information, and that if that information alters their perception of the value of the stock, their trading activity leads to changes in the market price. *West v. Prudential Secs., Inc.*, 282 F.3d 935, 937 (7th Cir. 2002). In short, the efficient market hypothesis predicts that the trading activity of professional investors leads to a market price for a security that reflects the value of a share of the defendant's stock. "An investor who buys or sells stock at the price set by the market does so in reliance on the integrity of that price. Because most publicly available information is reflected in market price, an investor's reliance on any public material misrepresentations, therefore, may be presumed for purposes of a Rule 10b-5 action." *Basic*, 485 U.S. at 247.[2]

---

2. Since *Basic* was decided, numerous studies have reported evidence failing to support the efficient market hypothesis' predictions. *See, e.g.*, Frederick C. Dunbar & Dana Heller, *Fraud on the Market Meets Behavioral Finance*, 31 DEL. J. CORP. L. 455, 471 (2006) ("The growing academic literature documenting violations of the efficient market hypothesis, along with the accumulated research on 'irrationality' of some investors, should

The reliance presumption approved in *Basic* is based on three premises: (1) the market price of a share of stock has absorbed the alleged material misrepresentation; (2) investors relied on the market price in making their investment decisions; and (3) that reliance was reasonable. *Semerenko v. Cendant Corp.*, 223 F.3d 165, 178-79 (3d Cir. 2000). Thus, when an investor invokes the fraud-on-the-market theory in a Rule 10b-5 case, the issue of whether an alleged misrepresentation actually moved the market price is, under *Basic*, central to the class certification decision. The theory is based on the assumption that it did, and because it did, an investor who is assumed to rely on the market price can be said to have relied (indirectly) on the alleged misrepresentation.

The Court in *Basic* did not advocate a particular form of the fraud-on-the-market theory, and it did not describe the particular showings an investor would be required to make in order to gain the benefit of a reliance presumption

---

prompt scholars, practitioners and regulators to examine the implications of these developments on securities law in general, and on the unchallenged applicability of fraud-on-the-market theory in particular."). In addition, Congress enacted the Private Securities Litigation Reform Act of 1995, Pub. L. 104-67, 109 Stat. 737, seeking, among other things, to limit frivolous securities claims. Some have argued that the Act's damages provisions show Congress' skepticism regarding that hypothesis as a descriptor of how securities markets actually operate. Jeffrey L. Oldham, *Comment: Taking "Efficient Markets" Out of the Fraud-On-The-Market Doctrine After The Private Securities Litigation Reform Act*," 97 Nw. U.L. Rev. 995, 1027-28 (2003). Although these developments could be used as reasons for moving away from *Basic*'s acceptance of the fraud-on-the-market theory as a vehicle for a reliance presumption, this brief proceeds under the current jurisprudence.

based on that theory. Instead, it only listed what the Court of Appeals for the Sixth Circuit had described as to what an investor would need to "plead and prove." 485 U.S. at 248 & n. 27. With no express statement as to what needed to be pleaded and proved for a fraud-on-the-market presumption to apply, lower courts have devised their own requirements. *See, e.g., In re Polymedica Corp.*, 432 F.3d 1, 12 (1st Cir. 2005) (noting that *Basic* provided no definition of an efficient market, leaving courts to define what was required); *Gariety v. Grant Thornton, LLP*, 368 F.3d 356, 368 (4th Cir. 2004) (same); *Abell v. Potomac Ins. Co.*, 858 F.2d 1104, 1120 (5th Cir. 1988), *vacated on other grounds sub. nom. Fryar v. Abell*, 492 U.S. 914 (1989) ("*Basic* essentially allows each of the circuits room to develop its own fraud-on-the-market rules.").

Increasingly, courts have shown a willingness to consider, at the class certification stage, whether it can be shown that an alleged misrepresentation actually moved the market price for a share of stock. *See, e.g., In re DVI Inc. Securities Litig.*, 2011 U.S. App. LEXIS 6302 (3d Cir. Mar. 29, 2011); *In re Salomon Analyst Metromedia Litig.*, 544 F.3d 474 (2d Cir. 2008); *Oscar Private Equity Invs. v. Allegiance Telecom, Inc.*, 487 F.3d 261 (5th Cir. 2007); *In re Xcelera.com Securities Litig.*, 430 F.3d 503, 513 (1st Cir. 2005).[3] That this is an issue related to the

3. The Court of Appeals for the Third Circuit also requires that an investor relying on the efficient market hypothesis plead that the alleged false statement or omission moved the market price. *Oran v. Stafford*. 226 F.3d 275, 282 (3d Cir. 2000); *In re Burlington Coat Factory Sec. Litig.*, 114 F.3d 1410, 1417 (3d Cir. 1997). That court has dismissed claims under Rule 12(b)(6) where an investor's allegations (and public information that could be judicially noticed) do not show that the market price changed "in

merits of an investor's claim has not been a deterrent for these courts. Nor should it be. The Court in *Basic*, for example, acknowledged that materiality – an element of a Rule 10b-5 claim – would be relevant to the class certification decision. 485 U.S. at 248 & n. 27 (noting that one of the Sixth Circuit's prerequisites was materiality). In *In re LTV Securities Litigation* (a case the Court cited favorably in *Basic*), Judge Higginbotham – then a district court judge – stated:

> Reliance is presumed once it is shown that a misrepresentation is material, or, what is substantially identical given the concept of materiality once it is established that the material misrepresentation affected the price of stock traded on the open market.

In re LTV Securities Litig., 88 F.R.D. 134, 142 (N.D. Tex. 1980) (emphasis added).

In sum, an investor who invokes the fraud-on-the-market theory injects a merits-related issue into the class certification decision. A fraud-on-the-market theory based reliance presumption depends on the premise that an alleged material misrepresentation moved the market price. That premise can be rebutted in various ways (*e.g.*, a showing of no price effect at the time of the allegedly false statement's publication or at the time it was allegedly

---

the period immediately following disclosure." *Oran*, 226 F.3d at 282. *See, e.g., In re Merck & Co. Securities Litig.*, 432 F.3d 261 (3d Cir. 2005); *In re NAHC, Inc. Securities Litig.*, 306 F.3d 1314 (3d Cir. 2002). The disclosure in such cases is held to be immaterial as a matter of law. *See, e.g., In re Merck & Co. Securities Litig.*, 432 F.3d at 268-71.

corrected, a showing that the market is not efficient). There can be no dispute that whether that premise holds true in a particular case is now an issue the investor must prove to be successful in his Rule 10b-5 suit. At issue is whether courts are limited under *Basic* in deciding what evidence can be reviewed at the class certification stage to determine whether a reliance presumption will apply (and thus whether the predominance requirement has been met). Are they limited solely to a showing of an efficient market, or may they also consider evidence (*e.g.*, lack of materiality or loss causation) supporting a conclusion as to whether there was a change in market price associated with the alleged misrepresentation?

II. Courts Must Be Able To Consider At The Certification Stage Evidence Regarding The Alleged Misrepresentation's Effect On The Market Price

Neither Rule 23 nor *Eisen* precludes a court, in its effort to satisfy itself that the requirements for class certification have been met, from considering evidence going to the heart of the major premise underlying the reliance presumption described in *Basic*, *i.e.*, that an alleged material misrepresentation has changed the market price of the investor's shares. Although other indicators are available, these indicators are, at best, indirect evidence – *e.g.*, a showing that the market price generally moves up or down on the basis of other public disclosures, or that a sufficient number of "market makers" follow the stock. There is no reason to exclude from the certification analysis direct evidence regarding whether an alleged misrepresentation moved the market price.

A. Rebuttal Of The Reliance Presumption Removes The Basis For Class Certification

The Court in *Basic* made clear that defendants could rebut a fraud-on-the-market theory based reliance presumption with "[a]ny showing that severs the link between the alleged misrepresentation and . . . the price received (or paid) by the plaintiff." 485 U.S. at 247-48. As the Court described, evidence related to materiality (whether an alleged misrepresentation moved the price at the time made) or to loss causation (whether an alleged correction moved the price) is among the evidence that would sever the tie between the alleged misrepresentation and the market price. *Basic*, 485 U.S. at 248-49.

A defendant's submission of reliable evidence supporting a conclusion that the alleged misrepresentation had no effect on market price would make the reliance presumption disappear, and would return the parties to the state that existed before the presumption was applied:

> In all civil actions and proceedings not otherwise provided for by Act of Congress or by these rules, a presumption imposes on the party against whom it is directed the burden of going forward with evidence to rebut or meet the presumption, but does not shift to such party the burden of proof in the sense of the risk of nonpersuasion, which remains throughout the trial upon the party on whom it was originally cast.

Fed. R. Evid. 301 (emphasis added). Rule 301 reflects the "bursting bubble" theory of presumptions because a

presumption does not shift the ultimate burden of proof. *St. Mary's Honor Ctr. v. Hicks*, 509 U.S. 502, 506-07 (1993); *Texas Dept. of Community Affairs v. Burdine*, 450 U.S. 248, 255 & n. 10 (1981); *Sheridan v. E.I. duPont de Nemours and Co.*, 100 F.3d 1061, 1080-81 (3d Cir. 1996) (*en banc*) (Alito, J., concurring in part and dissenting in part; describing that Congress rejected the Advisory Committee's proposal that the burden of persuasion shift to the party against whom the presumption operated).[4]

With a presumption in favor of the party having the ultimate burden of proof, if the other party produces evidence meeting or rebutting the presumption, the presumption disappears. *Sheridan*, 100 F.3d at 1079 (Alito, J.; "Under [the "bursting bubble"] theory, 'the only effect of a presumption is to shift the burden of producing evidence with regard to the presumed fact. If that evidence is produced by the adversary, the presumption is spent and disappears.' . . . The case then proceeds 'as though there had never been a presumption at all.'" (internal citations omitted)).

B. *Oscar*'s Requirement

In *Oscar*, Judge Higginbotham, writing for the Court of Appeals for the Fifth Circuit, required an investor asserting a Rule 10b-5 claim involving multiple simultaneous disclosures to produce evidence that the alleged misrepresentation actually "moved the market"

---

4. *See also Nunley v. City of Los Angeles*, 52 F.3d 792, 796 (9th Cir. 1995); *McKenna v. Pacific Rail Serv.*, 32 F.3d 820, 829-30 (3d Cir. 1994); *A.C. Aukerman Co. v. R.L. Chaides Constr.*, 960 F.2d 1020, 1037-38 (Fed. Cir. 1992); *In re Yoder Co.*, 758 F.2d 1114, 1120 & n.13 (6th Cir. 1985); *Legille v. Dann*, 178 U.S. App. D.C. 78, 544 F.2d 1, 5-7 (D.C. Cir. 1976).

before it was given the benefit of a reliance presumption. *Oscar*, 487 F.3d at 265. As Judge Higginbotham explained, this did not lift the defendant's burden of rebuttal because "[a]s a matter of practice, the oft-chosen defensive move is to make '*any* showing that severs the link' between the misrepresentation and the plaintiff's loss; to do so rebuts on arrival the plaintiff's fraud-on-the-market theory." *Id.*

As both the district court and court of appeals in this case understood, *Archdiocese of Milwaukee Supporting Fund, Inc. v. Halliburton Co*, 597 F.3d 330, 335 (5th Cir. 2010); *Archdiocese of Milwaukee Supporting Fund, Inc. v. Halliburton Co.*, 2008 U.S. Dist. LEXIS 89598 (N.D. Tex. Nov. 4, 2008), at *13, *Oscar*'s requirement means that an investor could produce evidence showing either that the price moved as a result of the alleged misrepresentation (*e.g.*, to cause the price to be distorted as a result of a false statement), or that the price moved as a result of a correction of the alleged misrepresentation.[5] Thus, before being given the benefit of a fraud-on-the-market based reliance presumption, *Oscar* requires that the investor produce evidence showing that the alleged material misrepresentation changed the price of the purchased or sold security, as the fraud-on-the-market theory predicts.[6] Judge Higginbotham in *Oscar* also noted that consideration of the issue at class certification did not

5. In this case, the investor chose to submit the latter type of evidence. *Archdiocese of Milwaukee Supporting Fund, Inc. v. Halliburton Co.*, 2008 U.S. Dist. LEXIS 89598 (Nov. 4, 2008), at *13.

6. The Court of Appeals for the First Circuit's approach appears to permit (although it does not require) empirical evidence regarding the effect of the alleged misrepresentation on market price in the context of an investor's "efficient market" showing. *In re Xcelera.com Securities Litig.*, 430 F.3d at 513.

preclude its reconsideration later in the proceedings (*e.g.*, summary judgment). 487 F.3d at 269 n. 40; *see also Gariety*, 368 F.3d at 366 (concluding that determinations for purposes of class certification are not binding on the trier of fact).

C. Current Rule 23 Permits Consideration Of Evidence Regarding Whether An Alleged Misrepresentation Moved The Market Price

Before a trial court certifies a class, the court must be satisfied that each of Rule 23's requirements have been met. *General Tel. Co. v. Falcon*, 457 U.S. 147, 161 (1982). As a result, the court must conduct a "rigorous analysis" of the particular claims, defenses, and applicable law. *Falcon*, 457 U.S. at 161; *Castano v. Am. Tobacco Co.*, 84 F.3d 734, 744 (5th Cir. 1996). It cannot in all cases simply take the pleadings as true. *See, e.g.*, *Gariety*, 368 F.3d at 365; *Szabo v. Bridgeport Machs., Inc.*, 249 F.3d 672, 675-76 (7th Cir. 2001). Instead, it must address factual and legal disputes relevant to Rule 23's requirements and make findings, determinations, or rulings with respect to those disputes. *See, e.g.*, *In re Hydrogen Peroxide Antitrust Litig.*, 552 F.3d 305, 319 (3d Cir. 2008) ("To summarize: because each requirement of Rule 23 must be met, a district court errs as a matter of law when it fails to resolve a genuine legal or factual dispute relevant to determining the requirements."); *In re Initial Pub. Offering Sec. Litig.* ["*In re IPO*"], 471 F.3d 24, 41 (2d Cir. 2006) ("[Class certification] determinations can be made only if the judge resolves factual disputes relevant to each Rule 23 requirement . . ."). This is true even if Rule 23 issues overlap with the merits of the plaintiff's claims.

Vallario v. Vandehey, 554 F.3d 1259, 1266-67 (10th Cir. 2009); *In re Polymedica Corp.*, 432 F.3d at 6.[7]

The 2003 amendments to Rule 23 greatly facilitated courts' agreement on the extent to which merits-related issues could be addressed when making the class certification decision. Among other changes, those amendments removed reference to "conditional" certification orders. No longer may courts grant orders on a tentative basis. *In re Hydrogen Peroxide Antitrust Litig.*, 552 F.3d at 319-20 (quoting Committee Report of the Standing Committee on Rules of Practice and Procedures). Courts are now expressly advised to refuse certification until they satisfy themselves that the requirements of certification have been met. Advisory Comm. Notes on Fed. R. Civ. P. 23 (2003 amends.), 28 U.S.C. App., p. 144 (2006 ed.). They no longer need to make a certification decision "as soon as practicable;" a decision "at an early practicable time" is sufficient. Fed. R. Civ. P. 23(c)(1)(A). Trial courts may permit "controlled discovery into the 'merits'" to facilitate the class certification decision. Advisory Comm. Notes on Fed. R. Civ. P. 23 (2003 amends.), 28 U.S.C. App., p. 144. Such changes gave a trial court more freedom to conduct a rigorous inquiry

---

7. *See also In re IPO*, 471 F.3d at 41; *Unger v. Amedisys Inc.*, 401 F.3d 316, 320-21 (5th Cir. 2005); *Gariety*, 368 F.3d at 365; *Newton v. Merrill Lynch, Pierce, Fenner & Smith, Inc.*, 259 F.3d 154, 168 (3d Cir. 2001); *Szabo*, 249 F.3d at 676; *Love v. Turlington*, 733 F.2d 1562, 1564 (11th Cir. 1984); *Blackie v. Barrack*, 524 F.2d 891, 897 (9th Cir. 1975). As the Court has noted, overlap with merits-related issues is a normal situation when a plaintiff requests certification under Rule 23(b)(3). *Coopers & Lybrand v. Livesay*, 437 U.S. 463, 469 n. 12 (1978).

into whether the requirements of Rule 23 have been met. *In re IPO*, 471 F.3d at 39.

Nothing within the amended Rule 23 precludes consideration at the class certification stage of whether an alleged misrepresentation moved the market price. Nor does the pre-amendment *Eisen v. Carlisle & Jacquelin*, 417 U.S. 156 (1974), impose a limitation. In fact, courts are virtually unanimous in concluding that *Eisen* does not preclude consideration of merits-related issues that are relevant to the class certification decision.[8]

This is because *Eisen* did not address whether a court could consider merits-related issues that were relevant to the class-certification decision. The district court in *Eisen* had concluded that the defendant should pay for notice to class members if the plaintiff could make a showing of a strong likelihood of success on the merits. 417 U.S. at 168. It conducted a preliminary hearing on the likelihood of success for this reason, and, concluding that the plaintiff was likely to prevail on his claims, imposed on the defendant the cost of notice. *Id.* Analyzing old Rule 23, this Court decided a very narrow issue, holding the district court had erred in evaluating the likelihood of success, and saying that "[n]othing in either the language or history of Rule 23 that gives a court any authority to conduct a preliminary inquiry into the merits of a suit

---

8. *Dukes v. Wal-Mart Stores, Inc.*, 603 F.3d 571, 582 (9th Cir.), *petition for cert. granted in part*, 131 S. Ct. 795 (2010); *Shook v. Bd. of County Comm'rs*, 543 F.3d 597, 612 (10th Cir. 2008); *In re IPO*, 471 F.3d at 33; *Gariety*, 368 F.3d at 365-66; *Newton*, 259 F.3d at 166-67; *Szabo*, 249 F.3d at 677; *Waste Management Holdings, Inc. v. Mowbray*, 208 F.3d 288, 298 (1st Cir. 2000); *Castano*, 84 F.3d at 744.

in order to determine whether it may be maintained as a class action." *Id.* at 177. *Eisen*'s oft-quoted statement, therefore, was not a ruling as to whether a district court could address merits-related issues where those issues overlapped the requirements for class certification. *In re IPO*, 471 F.3d at 33.

Because an investor invoking the fraud-on-the-market theory to gain a reliance presumption depends on the premise that the alleged misrepresentations moved the market price, he makes that issue central to the class certification decision.

D. Trial Courts Must Be Allowed To Consider At The Certification Stage Evidence Regarding Whether An Alleged Misrepresentation Moved The Market Price

The Court in *Basic* noted that a defendant's showing that severed the link between the misrepresentation and price could be made at trial, "throughout which the District Court retains the authority to amend the certification order as may be appropriate. See Fed. Rule Civ. Proc. 23(c)(1) and (c)(4)." *Basic*, 485 U.S. at 249, n. 29. Any argument that consideration of such evidence must be deferred until trial has been vitiated given the fundamental changes to Rule 23(c)(1) that have been made since *Basic* was decided. Class certification decisions are no longer to be viewed as tentative, *see* 5 Moore's Federal Practice § 23.80[2] ("The 2003 amendment clarifies that courts should not grant certification except after searching inquiry, and that courts should not rely on later developments to determine whether certification is appropriate."), and the Rule now makes absolutely clear

that courts may address issues related to the merits in making their certification decisions.

The potential need for some limited discovery does not justify delaying consideration of evidence regarding whether an alleged misrepresentation moved the market price. Producing support for (or rebutting) the fraud-on-the-market theory's predictions regarding price effects typically relies on readily available data, with some of it, as the Court of Appeals for the Third Circuit has recognized, being subject to judicial notice. *In re NAHC, Inc. Securities Litig.*, 306 F.3d 1314, 1330-31 (3d Cir. 2002).[9] Even if discovery is necessary given the nature of the investor's claims, courts now have the ability to permit it to the extent necessary to reach a class certification decision. Advisory Comm. Notes on Fed. R. Civ. P. 23 (2003 amends.), 28 U.S.C. App., p. 144..

In short, there is no conceivable reason to preclude the parties from submitting, and trial courts from considering, evidence regarding whether the assumptions underlying a fraud-on-the-market theory based reliance presumption are valid with respect to the alleged misrepresentations. The Court of Appeals for the Fifth Circuit concluded that the class certification stage was a proper time for defendants to rebut a fraud-on-the-market based

---

9. Given investors relying on the fraud-on-the-market theory must base their allegations on public statements, the Court of Appeals for the Third Circuit is not alone in using publicly available information to assess the investor's claims, even where that assessment occurs in the context of a motion to dismiss. *See, e.g., Lattanzio v. Deloitte*, 476 F.3d 147, 157-58 (2d Cir. 2007) (dismissing claims because allegations were insufficient to show loss causation in light of other defendant statements).

presumption, rejecting the argument that *Eisen* precluded consideration of that evidence. *Oscar*, 487 F.3d at 268, 270. The Courts of Appeals for the Second Circuit and for the Third Circuit agree that a defendant's rebuttal evidence is properly weighed at the class certification stage. *In re DVI Inc. Securities Litig.*, 2011 U.S. App. LEXIS 6302, at *36 (concluding that "rebuttal of the presumption of reliance falls within the ambit of issues that, if relevant, should be addressed by district courts at the class certification stage. "); *In re Salomon*, 544 F.3d at 485 ("[T]he [trial] court must permit defendants to present their rebuttal arguments 'before certifying a class . . . .'"). One difference between the Second Circuit's and Third Circuit's approach and that of the Fifth Circuit as currently applied appears to be that the latter requires investors to be first in producing price effect evidence. *In re DVI Inc. Securities Litig.*, 2011 U.S. App. LEXIS 6302, at *33-*37; *In re Salomon*, 544 F.3d at 486 n. 9.

Giving trial courts the ability to test the fraud-on-the-market theory's price predictions at the class certification stage allows them to satisfy themselves that the requirements for class certification have indeed been met. Even where a court initially looks to only indirect evidence of an effect on price for a reliance presumption to apply (*e.g.*, through a showing of "objective" materiality or that the market for the security at issue is, in general, efficient), a defendant must be allowed to submit rebuttal evidence, which may take the form of direct evidence of no price effect (either at the time of the alleged misrepresentation or at the time of the alleged correction). *See, e.g., In re American Int'l Group, Inc. Securities Litig.*, 265 F.R.D. 167, 182 (S.D.N.Y. 2010) (rejecting argument that rebuttal evidence was limited to a showing regarding the initial

misrepresentation and could not address the effects of a correction). If this evidence is reliable, the trial court must be allowed to refuse to certify a class because the presumption no longer applies, unless the investor can provide reasons for disregarding defendant's evidence or can come forth with additional support for a conclusion that the market price for the security reflected the alleged misrepresentation.

That it may sometimes be difficult to disentangle the effects of various forces affecting price from the effect of an alleged misstatement or its correction is also no reason to avoid the issue at the class certification stage. Because much of the evidence that would be presented relies largely on publicly available data, it is likely that such difficulties in proving price effects will be present both at the certification stage and at trial; additional discovery will not, in general, make disentangling the effects of multiple disclosures go away. Those difficulties, in short, are part and parcel of what an investor accepts when it decides to initiate a Rule 10b-5 class action and what a defendant accepts if it chooses to challenge the premise that an alleged misrepresentation changed the market price.

In sum, issues related to whether a central premise underlying a reliance presumption holds go hand in hand with an investor's invocation of the fraud-on-the-market theory. It makes no sense to limit the proofs that defendants may submit, or to limit a court's consideration of those proofs, simply because merits-related issues may be implicated. *Eisen* does not require this. Rule 23 now expressly permits it. Accepting investors' circumstantial evidence of an effect on market price (*e.g.* that the

market for a defendant's shares is generally efficient) and rejecting defendant's direct evidence that the alleged misrepresentation did not move that price, *e.g.*, *In re Boston Scientific Corp. Securities Litig.*, 604 F. Supp. 2d 275, 284-87 (D. Mass. 2009), means only that classes will be certified despite the fact that it cannot be assumed that investors, as a class, relied on the alleged misrepresentation.

E. The Fact That Price Effects Are Susceptible To Class-Wide Proof Is Irrelevant To The Class Certification Inquiry In A Fraud-on-the-Market Case

When an investor invokes the fraud-on-the-market theory to gain a presumption of reliance, the first question that must be addressed is whether that presumption is appropriately applied under the circumstances. The fact that an answer to that question may be supported or rebutted with class-wide evidence that addresses subsidiary class-wide issues does not mean common questions predominate for purposes of Rule 23(b)(3). The applicability of the presumption is the issue, not whether threshold facts can be proved with class-wide evidence.

For example, a number of courts require that investors show that the market for the security at issue is efficient before applying a reliance presumption, as Petitioner readily admits (Petitioner's Brief, pp. 35, 48). Whether the market for a security is efficient is a class-wide issue. That fact does not mean that an investor is entitled to class certification without satisfying the prerequisite. By the same token, the fact that the existence (or nonexistence) of a price effect associated with an alleged misrepresentation

– an issue that goes to the heart of a fraud-on-the-market based reliance presumption – is a "class-wide issue" that, virtually by definition, is provable on a class-wide basis does not mean that class certification is appropriate.

Unlike most other types of class actions, certification in Rule 10b-5 cases rests on a presumption. Class certification is therefore not simply a matter of looking at claims and possible defenses; applicability of the presumption is an issue that must be squarely addressed and decided. Applying a fraud-on-the-market based presumption is appropriate if its underlying premises are, more likely than not, valid in a particular case. If they are not valid, the reliance presumption should not be applied. Without the presumption, individual issues would predominate (each investor would have to be shown to have relied on the alleged misstatement), and the class should not be certified. Whether an alleged misrepresentation moved the market price is an issue that falls squarely within the assessment necessary to make sure that the requirements of Rule 23 have been met.

An argument based on the fact that effects on market price are susceptible to class wide proof might have some force if price effects were entirely irrelevant to the applicability of a fraud-on-the-market based reliance presumption. Some would undoubtedly prefer to view things in this manner, with reliance entirely eliminated as an element of a Rule 10b-5 claim. *See, e.g., Schleicher v. Wendt*, 618 F.3d 679, 682 (7th Cir. 2010) (asserting that the fraud-on-the-market doctrine "supplants 'reliance' as an independent element by establishing a more direct method of causation.") But this is not what the Court held.

The reasoning of a case like *Schleicher is* fundamentally at odds with *Basic*. This can be readily seen with the example of an alleged misrepresentation to which professional investors in an efficient market assign trivial, or no, importance. Such a misrepresentation would unlikely have any significant effect on market price, making it difficult to conceptualize how it could be said that, but for the alleged misrepresentation, the investor would not have entered into the transaction or that the statement caused the loss. Nonetheless, an advocate of the efficient market hypothesis would likely assert that the information has been absorbed into the market price; the information has merely been given a value of close to (or equal to) zero. Under this view, because the information is "in" the price, a class should be certified; the class would simply lose on the merits. *See Schleicher*, 618 F.3d at 685 ("It is possible to certify a class under Rule 23(b)(3) even though all statements turn out to have only trivial effects on stock prices. Certification is appropriate, but the class will lose on the merits.").

The Seventh Circuit's approach makes the reliance presumption irrebutable: any evidence regarding the absence of a price effect would go to the merits, not to rebutting the presumption. Therefore, a defendant would have no opportunity to "burst the bubble" of the presumption. It is no accident that *Schleicher*'s list of "contestable" elements in a Rule 10b-5 case involving a defendant whose shares are traded in an efficient market does not include reliance. 618 F.3d at 682 ("When a company's stock trades in a large and efficient market, the contestable elements of the Rule 10b-5 claim reduce to false-hood, scienter, materiality, and loss.").

Under the Seventh Circuit's approach, a class should be certified solely on a showing of an efficient market. Even requiring a showing of materiality to gain the benefit of the presumption is – despite *Basic*'s express reference to the Sixth Circuit's use of that prerequisite – a "misreading of *Basic*." 618 F.3d at 687. And thus evidence demonstrating that the alleged misrepresentations had no effect on market price may only be submitted at trial because that evidence goes solely to the merits of the plaintiff's claims (*e.g.*, either materiality or loss). The patient defendant who is subject to this regime goes through the entire litigation process before he gains a judgment that is adverse to every member of the class. The implications of the fact that it will be clear at that point that the class should never have been certified are not considered.

Of course, not every defendant is willing to accept the risks associated with taking a case to its conclusion and most cannot afford to do so from an economic or reputational perspective. Thus, many (perhaps most) are sufficiently risk-adverse that they settle to avoid it. As the Fifth Circuit has noted:

> [C]lass certification creates insurmountable pressure on defendants to settle, whereas individual trials would not. . . . The risk of facing an all-or-nothing verdict presents too high a risk, even when the probability of an adverse judgment is low.

Castano, 84 F.3d at 746 (citation omitted); *see also* Janet Cooper Alexander, *Re-thinking Damages in Securities Class Actions*, 48 STAN. L. REV. 1487, 1511 (1996) ("The

class-based compensatory damages regime in theory imposes remedies that are so catastrophically large that defendants are unwilling to go to trial even if they believe the chance of being found liable is small."). In this respect, class certification grants plaintiffs with weak cases a bargaining chip to extract from defendants (and current shareholders) more than the plaintiffs' claims are truly worth. Professionals, whose reputations are affected, are particularly vulnerable.

The *in terrorem* effect of the class certification decision is widely recognized. *See, e.g., Coopers & Lybrand v. Livesay*, 437 U.S. 463, 476, 98 S. Ct. 2454, 57 L. Ed. 2d 351 (1978); *West*, 282 F.3d at 937; *Castano*, 84 F.3d at 746; *In re Rhone-Poulenc Rorer, Inc.*, 51 F.3d 1293, 1299 (7th Cir. 1995). It is one reason for permitting such decisions to be reviewed on appeal prior to issuance of a final judgment in the case. Advisory Comm. Notes on Fed. R. Civ. P. 23 (1998 amends.), 28 U.S.C. App., p. 143; *see Szabo*, 249 F.3d at 675 (noting that the class certification decision at issue turned a $ 200,000 dispute into a $ 200 million dispute, making it "a prime occasion for the use of Rule 23(f), . . . "); *Newton v. Merrill Lynch, Pierce, Fenner & Smith, Inc.*, 259 F.3d 154, 162 (3d Cir. 2001).

Moreover, the certification of a class action makes the evaluation of the litigation contingency in financial accounting particularly difficult, because of the possible range of results. An erroneous determination based solely on the presumption could very well adversely affect the quality of financial reporting.

Nothing supports such results. *Cf. Basic*, 485 U.S. at 252 (White, J., joined by O'Connor, J., concurring in part

and dissenting in part) ("[A]llowing recovery in the face of affirmative evidence of nonreliance--would effectively convert Rule 10b-5 into a scheme of investor's insurance. There is no support in the Securities Exchange Act, the Rule, or our cases for such a result." (internal quotation marks and citations omitted)). The AICPA urges the Court to reject arguments seeking such an outcome.

A better approach would be to allow defendants to attempt to rebut the presumption at the class action certification hearing by considering any evidence that severs the connection between the alleged misrepresentation and the stock price. A successful rebuttal would destroy the reliance commonality embedded in the presumption, and it would then be incumbent on the plaintiffs to prove, by a preponderance of the evidence, that the necessary connection between the alleged misrepresentation and the stock price exists. Failure to do so would necessarily mean that individual issues predominate and that a class should not be certified.

III. The Judgment In This Case

Because *Basic* did not identify a set of requirements for a fraud-on-the-market based reliance presumption to apply, it is not inconsistent with *Basic* for the Fifth Circuit to include in a set of prerequisites a preliminary showing of an effect of an alleged misrepresentation on the market price of the security at issue. The Fifth Circuit's approach also does not conflict with Rule 23 or with *Eisen*, as neither precludes consideration of merits-related issues relevant to the class certification decision. Whether an alleged misrepresentation moved the market is relevant to that decision because the Fund invoked the fraud-on-the-market theory.

Even if *Basic* required that Halliburton be first in putting forth evidence regarding whether an alleged misrepresentation moved the market price, this does not require that the Fifth Circuit's decision in this case be vacated and the case remanded. Petitioners do not assert that Halliburton's evidence could not burst the bubble of the reliance presumption, and the panel in this case affirmed the denial of class certification on the basis of a finding that the Fund's evidence did not show that the alleged misrepresentations affected the market price of Halliburton's stock.

CONCLUSION

For the above reasons, the AICPA asks that the Court affirm the judgment below.

Respectfully submitted,

BRIEF FOR THE AMERICAN INSURANCE ASSOCIATION, AXIS INSURANCE COMPANY, CONTINENTAL CASUALTY COMPANY, AND HCC GLOBAL FINANCIAL PRODUCTS AS AMICI CURIAE SUPPORTING AFFIRMANCE

INTEREST OF AMICI CURIAE*

The American Insurance Association ("AIA") is the leading property-casualty insurance trade organization, representing approximately 300 insurers that write nearly $100 billion in premiums each year for virtually all types of property-casualty insurance. On issues of importance to the insurance industry and marketplace, AIA advocates sound public policies in legislative, regulatory, and judicial forums at the state and federal levels. AIA members are often involved in class-action litigation, both as litigants and as insurers of litigants, and have a great interest in the correct development of the law concerning class certification. AIA has therefore participated as *amicus curiae* in several recent cases on related issues, including *Stoneridge Investment Partners, LLC* v. *Scientific-Atlanta, Inc.*, 552 U.S. 148 (2008), and

* Pursuant to this Court's Rule 37.6, counsel for *amici* represents that no counsel for a party authored this brief in whole or in part, and that no person other than *amici* and their members made a monetary contribution intended to fund the preparation or submission of this brief. Pursuant to this Court's Rule 37.3, counsel for *amici* represents that all parties have filed letters with the Clerk giving blanket consent to the filing of *amicus* briefs.

Shady Grove Orthopedic Associates, P.A. v. *Allstate Insurance Co.*, 130 S. Ct. 1431 (2010).

Axis Insurance Company, and its affiliate Axis Reinsurance Company, are leading providers of specialty lines insurance in the United States. Axis has become a significant issuer of directors and officers liability insurance to public companies and is involved in numerous securities class actions throughout the United States. As such, Axis has a great interest in the correct development of the law concerning class certification in cases that implicate fiduciary duty liability.

Continental Casualty Company is one of the largest commercial and property and casualty insurers in the nation. Continental specializes in underwriting of business risks in a broad range of industries. Continental was a respondent in *Ortiz* v. *Fibreboard Corp.*, 527 U.S. 815 (1999), and has a continued interest in the correct development of the law concerning class certification.

HCC Global Financial Products is a wholly owned subsidiary of HCC Insurance Holdings Inc., one of the world's largest and most established specialty insurance groups, with offices in the United States, the United Kingdom, Spain, and Ireland. As a leading issuer of directors and officers liability insurance policies to public companies, HCC is involved in securities class actions across the United States. HCC therefore has a great interest in the correct development of the law concerning class-action litigation and the securities laws in the United States.

STATEMENT

This is a private securities-fraud case that raises significant and far-reaching issues under Federal Rule of Civil Procedure 23, which could affect *all* class actions in federal court.

The second question presented by petitioner is whether, in determining at the class-certification stage if plaintiffs had properly "invoke[d] the fraud-on-the-market presumption," the lower courts "improperly considered the merits of the underlying litigation, in violation of both *Eisen* v. *Carlisle & Jacquelin*, 417 U.S. 156 (1974), and Federal Rule of Civil Procedure 23." Pet. Br. i. This question, involving the interplay between the findings required by Rule 23 and the "merits" of a lawsuit, receives scant discussion in petitioner's brief (*see id.* at 46–51), somewhat more attention in the Solicitor General's brief, and none at all in the other *amicus* briefs advocating reversal. Yet the Court's answer to it could have a wide-ranging impact on future class actions, in both securities cases and others. This brief therefore focuses on that question.

Petitioner—an investor in Halliburton's common stock—alleges that Halliburton made false statements about its business and that stockholders lost money when Halliburton subsequently corrected those statements. Petitioner sought certification of "a class of all persons and entities who purchased or acquired common stock of Halliburton during the class period." Pet. Br. 14.

The district court rejected petitioner's class-certification bid on the ground that petitioner could not establish entitlement to the "fraud on the market" presumption that this Court recognized in *Basic Inc.* v. *Levinson*, 485 U.S. 224 (1988), which enables

a securities plaintiff to establish the "reliance" element of its claim without proving individual investors' actual reliance on the allegedly fraudulent statements. *Id.* at 242–50. In making this determination, the district court considered *all* of the evidence tendered by the parties—both petitioner's argument in support of the presumption and Halliburton's rebuttal arguments. *See* Pet. App. 11a–54a. The Fifth Circuit affirmed. *See id.* at 111a–136a.

SUMMARY OF ARGUMENT

The decision below, affirming the district court's resolution of the applicability of the fraud-on-the-market presumption at the class-certification stage, is correct and fully in accord with this Court's precedents.

I. A class action "may only be certified if the trial court is satisfied, after a *rigorous analysis*," that the plaintiff can meet the certification requirements set forth in Rule 23. *Gen. Tel. Co. of the Sw.* v. *Falcon*, 457 U.S. 147, 161 (1982) (emphasis added). Plaintiffs seeking class certification must do more than simply allege that they have met the requirements of Rule 23; they must establish that those requirements have actually been met. As pertinent here, the district court must "find[] that the questions of law or fact common to class members *predominate* over any questions affecting only individual members." Fed. R. Civ. P. 23(b)(3) (emphasis added). Courts must address these issues as part of the Rule 23 analysis even if there is some overlap with the merits of the case. *See Coopers & Lybrand* v. *Livesay*, 437 U.S. 463, 469 & n.12 (1978).

II. Reliance is an essential element of a securities fraud claim. *Dura Pharm., Inc.* v. *Broudo*, 544 U.S. 336, 341–42 (2005). Where each individual member

of a proposed class seeking damages arising from an alleged securities fraud (or some other cause) must demonstrate reliance with individualized proof that they relied on the defendant's statements, class certification is not appropriate under Rule 23 because individual issues will "predominate" over common issues. Fed. R. Civ. P. 23(b)(3). Accordingly, the "fraud on the market" presumption is the key to class certification for securities plaintiffs. *See Basic Inc.* v. *Levinson*, 485 U.S. 224, 242–50 (1988).

Nothing about Section 10(b) or the fraud-on-the-market presumption alters the class-certification framework or the district court's mandate at the class-certification stage. The district court in a Section 10(b) case must determine if the fraud-on-the-market presumption is available at the class-certification stage. The procedure for resolving that "reliance" issue in a Section 10(b) case is no different than in any other case: As every court of appeals has held, the district court can consider "merits" evidence—including the plaintiff's evidence and the defendant's rebuttal evidence—to resolve that question. *See, e.g.*, *In re IPO Sec. Litig.*, 471 F.3d 24, 41–43 (2d Cir. 2006).

As both petitioner and the United States acknowledge, the applicability of the fraud-on-the-market presumption is a necessary precondition to certification of a securities fraud claim, because in the absence of the presumption individualized questions of reliance will "predominate" over any common issues in the case. Pet. Br. 48 & n.15; U.S. Br. 11.

Petitioner and the United States insist, however, that the district court may not consider evidence rebutting the fraud-on-the-market presumption until the case proceeds to summary judgment or trial.

Pet. Br. 35; U.S. Br. 17–19. That is manifestly wrong. A district court must weigh *both* sides' evidence and make factual findings on the Rule 23 factors *before* certifying a class. *See, e.g.*, *Falcon*, 457 U.S. at 160–61; *In re Hydrogen Peroxide Antitrust Litig.*, 552 F.3d 305, 307, 320 (3d Cir. 2009) (amended opinion). In particular, a district court "must permit defendants to present their rebuttal arguments [regarding the fraud-on-the-market presumption] before certifying a class." *In re Salomon Analyst Metromedia Litig.*, 544 F.3d 474, 485 (2d Cir. 2008) (internal quotation marks omitted); *see also In re DVI, Inc. Sec. Litig.*, No. 08-8033 (3d Cir. Mar. 29, 2011), slip op. at 31–32. Because that is what the courts below did in this case, the judgment of the court of appeals should be affirmed.

ARGUMENT

Reliance is an essential element of a claim for securities fraud. *Matrixx Initiatives, Inc.* v. *Siracusano*, No. 09-1156 (U.S. Mar. 22, 2011), slip op. at 9 (citing *Stoneridge Inv. Partners, LLC* v. *Scientific-Atlanta, Inc.*, 552 U.S. 148, 157 (2008)). Such a claim usually cannot proceed as a class action without the "fraud on the market" presumption of reliance, because in the absence of that presumption individuated issues of reliance will "predominate" over the common issues in the case. Fed. R. Civ. P. 23(b)(3); *Basic Inc.* v. *Levinson*, 485 U.S. 224, 242 (1988). Therefore, the plaintiff in such a case must establish its entitlement to the *Basic* presumption at the class-certification stage, and the district court must also resolve at that stage any challenges to the applicability of the presumption put forward by the defendant.

I. DISTRICT COURTS MUST CONDUCT A "RIGOROUS ANALYSIS" OF CLASS-CERTIFICATION REQUIREMENTS

1. Petitioner acknowledges that "[t]rial courts must make a rigorous determination of whether the [Rule] 23 prerequisites are satisfied." Pet. Br. 48. The United States, likewise, recognizes that the class-certification procedure may "'involve[] considerations that are enmeshed in the factual and legal issues comprising the plaintiff's cause of action,'" and "may require analysis of the elements of the plaintiff's claims and the manner in which those elements would ordinarily be proved." U.S. Br. 23 (alteration in original) (quoting *Gen. Tel. Co. of the Sw.* v. *Falcon*, 457 U.S. 147, 160 (1982)).

This point is not contested because this Court has clearly held that a class action "may only be certified if the trial court is satisfied, after a *rigorous analysis*, that the prerequisites of Rule 23(a) have been satisfied." *Falcon*, 457 U.S. at 161 (emphasis added); *see also Coopers & Lybrand* v. *Livesay*, 437 U.S. 463, 469 (1978) ("the class determination generally involves considerations that are enmeshed in the factual and legal issues comprising the plaintiff's cause of action") (internal quotation marks omitted). "[A]ctual, not presumed, conformance with Rule 23(a) remains ... indispensable" (*Falcon*, 457 U.S. at 160), and courts must therefore take a "close look" at the evidence and legal arguments presented before certifying a class. *Amchem Prods., Inc.* v. *Windsor*, 521 U.S. 591, 615 (1997). This includes the predominance requirement of Rule 23(b)(3), which this Court has described as a "vital prescription." *Id.* at 623.

A plaintiff seeking certification of a class is thus required to do more than just *allege* the facts neces-

sary to satisfy Rule 23 or put forth "some evidence" that the Rule's requirements have been met. *See In re IPO Sec. Litig.*, 471 F.3d 24, 33, 42 (2d Cir. 2006) (rejecting "some showing" burden of proof); *In re Hydrogen Peroxide Antitrust Litig.*, 552 F.3d 305, 316 (3d Cir. 2009) (amended opinion) ("the requirements set out in Rule 23 are not mere pleading rules"); *see also* 5 James Wm. Moore et al., Moore's Federal Practice § 23.61 (3d ed. 2008) ("Pleading requirements are distinct from the requirements for certifying a case as a class action"). At class certification, "[t]ough questions must be faced and squarely decided, if necessary by holding evidentiary hearings and choosing between competing perspectives." *West* v. *Prudential Sec., Inc.*, 282 F.3d 935, 938 (7th Cir. 2002). In other words, a plaintiff must *establish* that the Rule 23 requirements are "actual[ly]" satisfied. *Falcon*, 457 U.S. at 160.

The 2003 amendments to Rule 23 further clarified the scope of review required at the class-certification stage. The amendments removed from Rule 23(c)(1)(C) the provision that class certification "may be conditional," because "[a] court that is not satisfied that the requirements of Rule 23 have been met should refuse certification until they have been met." Fed. R. Civ. P. 23(c)(1)(C) advisory committee's note (2003). And where Rule 23(c)(1)(A) previously stated that class certification should be decided "as soon as practicable," it now only requires that the certification decision be made "at an early practicable time." "Allowing time for limited discovery supporting certification motions may ... be necessary for sound judicial administration." *Hydrogen Peroxide*, 552 F.3d at 319 (internal quotation marks omitted). Taken together, these amendments "combine to permit a more extensive inquiry into whether Rule 23 re-

quirements are met than was previously appropriate." *IPO*, 471 F.3d at 39; *see also Hydrogen Peroxide*, 552 F.3d at 318–19.

Before the 2003 amendments, some courts shied away from a full and rigorous review of the law and evidence at class certification, invoking this Court's statement that "nothing in either the language or history of Rule 23 ... gives a court any authority to conduct a preliminary inquiry into the merits of a suit in order to determine whether it may be maintained as a class action." *Eisen* v. *Carlisle & Jacquelin*, 417 U.S. 156, 177 (1974); *see, e.g.*, *In re Visa Check/MasterMoney Antitrust Litig.*, 280 F.3d 124, 134–35 (2d Cir. 2001); *Caridad* v. *Metro-N. Commuter R.R.*, 191 F.3d 283, 292 (2d Cir. 1999).

As petitioner concedes, however, this was a misreading of *Eisen* that has subsequently been corrected in the lower courts. Pet. Br. 47 ("While *Eisen* was initially construed as a blanket prohibition against consideration of the merits of the underlying claims at class certification, courts have since interpreted *Eisen* to prohibit examination of the merits except insofar as necessary to determine whether the Rule 23 prerequisites have been met") (citing *IPO*, 471 F.3d at 41); *see also Hydrogen Peroxide*, 552 F.3d at 316–17; *In re Polymedica Corp. Sec. Litig.*, 432 F.3d 1, 6 (1st Cir. 2005); *Unger* v. *Amedisys, Inc.*, 401 F.3d 316, 320–21 (5th Cir. 2005); *Gariety* v. *Grant Thornton, LLP*, 368 F.3d 356, 366 (4th Cir. 2004); Manual for Complex Litigation (Fourth) § 21.14 (2004) ("A preliminary inquiry into the merits may be required to decide whether the claims and defenses can be presented and resolved on a class-wide basis").

The district court in *Eisen* had ordered the defendants to pay 90 percent of the cost of notice to the class based on its determination that plaintiffs were likely to succeed on the merits of their claim. 417 U.S. at 168. This Court held that Rule 23 does not authorize shifting the cost of notice from the plaintiff to the defendant (*id.* at 177), and in that context rejected the district court's "preliminary inquiry into the merits" because it would allow a class representative to adjudicate the merits of the case "without any assurance that a class action may be maintained." *Id.* at 177–78. The Court concluded that "[i]n determining the propriety of a class action, the question is not whether the plaintiff or plaintiffs have stated a cause of action or will prevail on the merits, but rather whether the requirements of Rule 23 are met." *Id.* at 178 (internal quotation marks omitted).

In *Eisen*, therefore, the district court "assessed the merits to decide the *collateral* issue of who should pay for the notice." *IPO*, 471 F.3d at 34 (emphasis added). Nothing in *Eisen* suggests that a district court can avoid deciding an issue *central to* the Rule 23 requirements because that issue also relates to the merits of the case. And this Court's decisions since *Eisen* recognize that "the class determination generally involves considerations that are enmeshed in the factual and legal issues comprising the plaintiff's cause of action," and "it may be necessary for the court to probe behind the pleadings before coming to rest on the certification question." *Falcon*, 457 U.S. at 160 (internal quotation marks omitted); *see also Coopers & Lybrand*, 437 U.S. at 469 & n.12 ("Evaluation of many of the questions entering into determination of class action questions is intimately involved with the merits of the claims") (internal

quotation marks omitted); Fed. R. Civ. P. 23(c)(1)(A) advisory committee's note (2003) ("Although an evaluation of the probable outcome on the merits is not properly part of the certification decision, ... it is appropriate to conduct controlled discovery into the 'merits,' limited to those aspects relevant to making the certification decision on an informed basis").

Neither petitioner nor the United States takes issue with the unbroken line of post-2003 appellate decisions rejecting a reading of *Eisen* that limits district courts' review of the Rule 23 requirements at class certification. On the contrary, they both cite these cases with approval as correctly stating the applicable legal rules. *See* Pet. Br. 47–48 (citing *IPO*, 471 F.3d at 41, and *Hydrogen Peroxide*, 552 F.3d at 311–12); U.S. Br. 23–24 (ditto). It is therefore undisputed that district courts have not just the authority but the obligation to resolve disputes that go to the Rule 23 requirements, even if they overlap with the "merits" of the dispute. *See, e.g.*, *IPO*, 471 F.3d at 41 ("the obligation" to determine if Rule 23 is satisfied "is not lessened by overlap between a Rule 23 requirement and a merits issue, even a merits issue that is *identical* with a Rule 23 requirement") (emphasis added).

2. Where necessary to fully analyze the Rule 23 requirements, district courts must weigh the evidence presented by the parties and make factual findings regarding the evidence that is "enmeshed" with the class-certification analysis. *Falcon*, 457 U.S. at 160 (internal quotation marks omitted). "Class certification requires a *finding* that each of the requirements of Rule 23 has been met." *Hydrogen Peroxide*, 552 F.3d at 320 (emphasis added); *see also, e.g.*, *Blades* v. *Monsanto Co.*, 400 F.3d 562, 575 (8th Cir. 2005).

If expert evidence is submitted at class certification—for example, an event study analyzing stock price movements—that evidence must meet the standards for admissibility of expert testimony set forth in *Daubert* v. *Merrell Dow Pharmaceuticals, Inc.*, 509 U.S. 579 (1993). *See Am. Honda Motor Co.* v. *Allen*, 600 F.3d 813, 815–16 (7th Cir. 2010) (per curiam); *Hydrogen Peroxide*, 552 F.3d at 315 n.13; *Unger*, 401 F.3d at 323 n.6. And a court must also analyze whether the expert evidence suffices to meet the plaintiff's burden of satisfying Rule 23. *See Hydrogen Peroxide*, 552 F.3d at 323–24. Certifying a class without exercising such scrutiny would "amount[] to a delegation of judicial power to the plaintiffs, who can obtain class certification just by hiring a competent expert." *West*, 282 F.3d at 938; *see also McLaughlin* v. *Am. Tobacco Co.*, 522 F.3d 215, 232 (2d Cir. 2008); *IPO*, 471 F.3d at 42; *Gariety*, 368 F.3d at 366–67.

According to petitioner, some discovery might be required to enable the parties to litigate, and the courts to resolve, the Rule 23 prerequisites. Pet. Br. 52. And the United States argues that requiring proof at class certification "requires plaintiffs to prove an essential element of their case before they have had an adequate opportunity to adduce the evidence required for such a showing." U.S. Br. 26. But Rule 23 *specifically contemplates* pre-merits discovery, and was amended in 2003 to allow even more time before certification in order for the parties to develop the record. *See* Fed. R. Civ. P. 23(c)(1) advisory committee's note (2003) (pre-certification discovery required "to identify the nature of the issues that actually will be presented at trial" in order for the judge to "mak[e] the certification decision on an informed basis").

Discovery may therefore be proper "to illuminate issues bearing on certification, including the nature of the issues that will be tried; whether the evidence on the merits is common to the members of the proposed class; whether the issues are susceptible to class-wide proof; and what trial-management problems the case will present." Summary of the Report of the Judicial Conference Committee on Rules of Practice and Procedure at 4 (2002); *see also* Manual for Complex Litigation (Fourth) § 21.14 (2004) ("discovery may be necessary ... when the facts relevant to any of the certification requirements are disputed, or when the opposing party contends that proof of the claims or defenses unavoidably raises individual issues") (citations omitted). There is no basis for arguing that it is difficult or infeasible for plaintiffs to develop the evidence necessary to establish the Rule 23 requirements when the Rule specifically allows them to do so.

3. Every court of appeals to have considered the issue has concluded that the plaintiff bears the burden of proving the Rule 23 prerequisites by a preponderance of the evidence. *Hydrogen Peroxide*, 552 F.3d at 320; *Teamsters Local 445 Freight Div. Pension Fund* v. *Bombardier, Inc.*, 546 F.3d 196, 202 (2d Cir. 2008); *see also Alaska Elec. Pension Fund* v. *Flowserve Corp.*, 572 F.3d 221, 228 (5th Cir. 2009) (per curiam). These decisions correctly state the applicable standard of proof.

The government does not take issue with this unanimity in the lower courts on the preponderance standard. U.S. Br. 10 n.1 ("The courts that have addressed the question have held that facts relevant to whether the Rule 23 requirements have been met must be established by a preponderance of the evidence"). Petitioner does not even mention the appro-

priate standard, thus conceding that preponderance of the evidence—as articulated in cases such as *Hydrogen Peroxide*, with which petitioner expresses agreement—is the correct standard.

Preponderance of the evidence is the default standard in civil cases, as it "allows both parties to 'share the risk of error in roughly equal fashion.'" *Herman & MacLean* v. *Huddleston*, 459 U.S. 375, 390 (1983) (quoting *Addington* v. *Texas*, 441 U.S. 418, 423 (1979)). Departures from the preponderance standard usually involve the application of a *higher* standard of proof where "particularly important individual interests or rights are at stake." *Id.* at 389.

There is no basis for adopting a *lesser* burden of proof for the Rule 23 prerequisites at class certification. Rule 23's requirements are more than "mere pleading rules" (*Hydrogen Peroxide*, 552 F.3d at 316), and thus require a standard more stringent than "plausibility." *Ashcroft* v. *Iqbal*, 129 S. Ct. 1937, 1949–50 (2009); *Bell Atl. Corp.* v. *Twombly*, 550 U.S. 544, 555–57 (2007). This Court's statements that a district court must "rigorous[ly]" analyze (*Falcon*, 457 U.S. at 161), and take a "close look" (*Amchem*, 521 U.S. at 615), at whether Rule 23 is satisfied are plainly incompatible with imposing a minimal burden on plaintiffs seeking class certification. And the important interests of the absent class members (*see Amchem*, 521 U.S. at 629) preclude any ratcheting down of the standard of proof from the baseline "preponderance" standard.

The United States argues that analyzing the substantive issues in the case at class certification under the preponderance standard "shoehorn[s] a motion-to-dismiss inquiry into the class-certification analy-

sis," which it suggests "usurp[s] the role of juries" in resolving substantive legal issues. U.S. Br. 26–27. But that argument proves too much: Pretrial motions *always* entail judicial resolution of issues that might otherwise be submitted to a jury, and if such motions are authorized by law there is no "usurpation" (and no Seventh Amendment concern). *Tellabs, Inc.* v. *Makor Issues & Rights, Ltd.*, 551 U.S. 308, 326–27 (2007) (internal quotation marks omitted). In any event, the leading decisions indicate that judicial determinations made at the class-certification stage are not binding on later proceedings in the case. *See, e.g.*, *Hydrogen Peroxide*, 552 F.3d at 318; *IPO*, 471 F.3d at 41.

4. These foregoing principles of class-certification law are critical to ensuring that class-wide adjudication "leaves the parties' legal rights and duties intact and the rules of decision unchanged." *Shady Grove Orthopedic Assocs., P.A.* v. *Allstate Ins. Co.*, 130 S. Ct. 1431, 1443 (2010) (plurality). Class actions depart from the general rule that litigation is conducted only by the named parties and binds only them. *See Ortiz* v. *Fibreboard Corp.*, 527 U.S. 815, 846 (1999); *Califano* v. *Yamasaki*, 442 U.S. 682, 700–01 (1979). And while class actions may in some cases promote efficiency, they must also be fair to absent class members (*see, e.g.*, *Phillips Petroleum Co.* v. *Shutts*, 472 U.S. 797, 811–12 (1985)), as well as defendants. *See Coopers & Lybrand*, 437 U.S. at 476.

A class representative can lose just as easily as it can win. *See Falcon*, 457 U.S. at 161 (courts cannot assume that "all will be well for surely the plaintiff will win and manna will fall on all members of the class") (citation and internal quotation marks omitted); *Schleicher* v. *Wendt*, 618 F.3d 679, 685 (7th Cir.

2010) (even when "[c]ertification is appropriate" a class can "lose on the merits"). And when the named plaintiff loses, so does the certified class, which is bound by the judgment. *See Cooper* v. *Fed. Reserve Bank of Richmond*, 467 U.S. 867, 874 (1984). The class-certification inquiry must therefore ensure that, should such a judgment issue, absent class members are sufficiently protected. *See Taylor* v. *Sturgell*, 553 U.S. 880, 900–01 (2008); *Amchem*, 521 U.S. at 621–22, 629. Rule 23(b)(3)'s predominance requirement, in particular, has been deemed a "vital prescription" by the Court. *Amchem*, 521 U.S. at 623. And rigorous analysis is needed to ensure that those who aspire to bind others to a judgment do so in a way that is fair to those being bound.

A court must also be mindful that "[c]ertification of a large class may so increase the defendant's potential damages liability and litigation costs that he may find it economically prudent to settle and to abandon a meritorious defense." *Coopers & Lybrand*, 437 U.S. at 476; *see also, e.g.*, *Hydrogen Peroxide*, 552 F.3d at 310; *Newton* v. *Merrill Lynch, Pierce, Fenner & Smith, Inc.*, 259 F.3d 154, 162, 167–68 & n.8 (3d Cir. 2001); *Castano* v. *Am. Tobacco Co.*, 84 F.3d 734, 746 (5th Cir. 1996); *In re Rhone-Poulenc Rorer, Inc.*, 51 F.3d 1293, 1298 (7th Cir. 1995). As the Seventh Circuit put it, "class certification turns a $200,000 dispute ... into a $200 million dispute[,]" which "puts a bet-your-company decision to [a defendant] and may induce a substantial settlement even if the [plaintiff's] position is weak." *Szabo* v. *Bridgeport Machs., Inc.*, 249 F.3d 672, 675 (7th Cir. 2001); *see also CE Design Ltd.* v. *King Architectural Metals, Inc.*, No. 10-8050 (7th Cir. Mar. 18, 2011), slip. op. at 2 (Posner, J.) ("Certification as a class action can coerce a defendant into settling on highly disadvanta-

geous terms regardless of the merits of the suit"). While this pressure alone might not be a reason to deny certification (*see Rhone-Poulenc*, 51 F.3d at 1299), it warrants careful attention in the class-certification analysis. *See, e.g., Newton*, 259 F.3d at 192 ("class certification would place hydraulic pressure on defendants to settle which weighs in the superiority analysis [under Rule 23(b)(3)]").

This is particularly true in the context of securities class actions using the fraud-on-the-market presumption, which already "reallocates the risks of mistaken adjudications" in a plaintiff's favor. *In re Salomon Analyst Metromedia Litig.*, 544 F.3d 474, 483 (2d Cir. 2008) (internal quotation marks omitted). We turn now to that particular implementation of this Court's rigorous analysis mandate.

II. The Applicability of the Fraud-on-the-Market Presumption Is a Class-Certification Requirement

1. In a private federal securities action, a plaintiff must show, among other things, that it *relied* on a material misstatement made by the defendant. *See Dura Pharm., Inc. v. Broudo*, 544 U.S. 336, 341 (2005); *Basic*, 485 U.S. at 243. "Reliance provides the requisite causal connection between a defendant's misrepresentation and a plaintiff's injury." *Basic*, 485 U.S. at 243. But the need to satisfy reliance in a securities action would ordinarily preclude class treatment, "since individual issues would ... overwhelm[] the common ones." *Id.* at 242.

This Court's 4-2 decision in *Basic*, however, recognized the "fraud on the market" presumption, which creates a rebuttable presumption of class-wide reliance if a material public misstatement is made about a security that trades in a well-developed, effi-

cient market. *See* 485 U.S. at 247–48; *see also, e.g.*, *Salomon*, 544 F.3d at 483. The presumption rests on the economic theory that, in an efficient securities market, the price of a security will reflect publicly available information about that security, including statements made by the issuing company, and thus, one who buys at the market price will have indirectly relied on that publicly available information. *See Basic*, 485 U.S. at 241–42, 246–47; *see also Stoneridge*, 552 U.S. at 159.

The fraud-on-the-market *presumption* is meant "to assist courts in managing circumstances in which direct proof, for one reason or another, is rendered difficult." *Basic*, 485 U.S. at 245. But if the presumption cannot be established, then reliance cannot be proved in the aggregate and the class may not be certified because individual questions will predominate. *See id.* at 242; *IPO*, 471 F.3d at 43 ("Without the *Basic* presumption, individual questions of reliance would predominate over common questions"); *see also Salomon*, 544 F.3d at 485; *Gariety*, 368 F.3d at 362–64. Petitioner acknowledges as much. *See* Pet. Br. 48 ("determining whether plaintiffs have met the requirements for invoking the presumption ... is crucial to showing [that] common issues predominate").

The fraud-on-the-market presumption is rebuttable on "[a]ny showing that severs the link between the alleged misrepresentation and either the price received (or paid) by the plaintiff, or his decision to trade at a fair market price." *Basic*, 485 U.S. at 248. Such a showing breaks the "causal connection" between the alleged misrepresentation and investor reliance. *Id.* at 248–49.

2. Because establishing the availability of the fraud-on-the-market presumption is a necessary predicate to a finding that common issues predominate, a court must determine if a plaintiff is entitled to that presumption *before* certifying the class. *See IPO*, 471 F.3d at 43. Petitioner here relied on the fraud-on-the-market presumption to satisfy Rule 23(b)(3)'s predominance requirement, squarely presenting the issue at class certification. J.A. 147a–148a. The lower courts were, accordingly, correct to scrutinize it as they did. *See* Pet. App. 3a–54a, 111a–136a; *see also Basic*, 485 U.S. at 242; *Falcon*, 457 U.S. at 160–61; *Hydrogen Peroxide*, 552 F.3d at 307, 320; *Unger*, 401 F.3d at 321; *Gariety*, 368 F.3d at 365–66.

Indeed, both petitioner and the United States accept that the plaintiff bears the burden of showing, at the class-certification stage, that the predicates of the *Basic* presumption are met. Pet. Br. 48 (court must "determin[e] whether plaintiffs have met the requirements for invoking the presumption, in particular by showing that the market in question is efficient"); U.S. Br. 11 ("To invoke that presumption at the class-certification stage, petitioner was required to show that respondents' alleged misrepresentations were made publicly, that the company's shares were traded in an efficient market, and that the plaintiff traded shares between the time the misrepresentations were made and the time the truth was revealed").

Petitioner argues, however, that "the proper time to rebut the presumption of reliance ... is at *trial*, *not* class certification." Pet. Br. 35; *but see id.* at 48 n.15. The United States likewise argues that a court need not permit a defendant to rebut the fraud-on-the-market presumption at class certification. U.S. Br.

19 n.3. The government's position is entitled to no deference, since government prosecutions need not comply with Rule 23 and, in any event, the government takes the position that reliance is not an element of an enforcement action. *See Piper* v. *Chris-Craft Indus., Inc.*, 430 U.S. 1, 42 n.27 (1977). And both the government and petitioner are wrong in this respect.

The leading decision on the rebuttal issue is *Salomon*, from the Circuit that hears more securities cases than any other and that announced (in *IPO*) the definitive treatment of a district court's authority to resolve disputes that go to the Rule 23 requirements. The *Salomon* court recognized that the district court must consider not only plaintiff's proof of entitlement to the *Basic* presumption, but also any rebuttal evidence offered by the defendant, *before* certifying the class. *See* 544 F.3d at 485 (the required "definitive assessment that the Rule 23(b)(3) predominance requirement has been met ... cannot be made without determining whether defendants can successfully rebut the fraud-on-the-market presumption") (internal quotation marks omitted). While petitioner tries to square *Salomon* with its position (*see, e.g.*, Pet. Br. 24 & 45), the government maintains that *Salomon*'s ruling on rebuttal evidence was "err[oneous]." U.S. Br. 19 n.3. It is the government, however, that errs.

The Third Circuit very recently agreed that "rebuttal of the presumption of reliance falls within the ambit of issues that, if relevant, should be addressed by district courts at the class certification stage." *In re DVI, Inc. Sec. Litig.*, No. 08-8033 (3d Cir. Mar. 29, 2011), slip op. at 31. The court explained that because the presumption of reliance "is necessary to meet the Rule 23(b)(3) predominance requirement, a

district court should conduct a rigorous market efficiency analysis." *Id.* at 19. "This may, in some cases, include weighing conflicting expert testimony and making factual findings." *Ibid.* Although the court expressed the view that "loss causation considered separate and apart from the presumption of reliance will rarely defeat the Rule 23(b)(3) predominance requirement," it recognized that "evidence introduced by a defendant at the class certification stage demonstrating ... that there was no market impact and therefore no loss causation" can "rebut the presumption of reliance and in turn defeat predominance." *Id.* at 32–33. Therefore such evidence—that is, evidence related to causation-cum-reliance—must be considered by the district court at the certification stage.

Salomon and *DVI* are applications of the proper rule that a district court *must* consider a defendant's rebuttal arguments, at the class-certification stage, because this is the only way to conduct the "close look" that ensures "actual ... conformance" with Rule 23. *Amchem*, 521 U.S. at 615; *Falcon*, 457 U.S. at 160–61. As *Basic* held, rebuttal of the presumption means that a class cannot be maintained. *See* 485 U.S. at 242. 248. Because a court must make a "definitive assessment" (*IPO*, 471 F.3d at 41), of whether the Rule 23 requirements are satisfied, it must consider a defendant's evidence rebutting the fraud-on-the-market presumption at class certification. *See Salomon*, 544 F.3d at 485; *Gariety*, 368 F.3d at 366–67. The court's analysis is not limited to the plaintiff's evidence in support of class certification; if the defendant can successfully rebut the presumption, then the court cannot allow the plaintiff to present its case at trial on a class-wide basis and therefore cannot certify the class. *See* Fed. R. Civ. P.

23(c)(1)(B); *Salomon*, 544 F.3d at 485 ("The *Basic* Court explained that a successful rebuttal *defeats* certification by defeating the Rule 23(b)(3) predominance requirement") (citing 485 U.S. at 249 n.29); *see also DVI*, slip op. at 31–32.

3. The United States mistakenly claims that "[f]or purposes of Rule 23, a defendant's attempt to rebut the fraud-on-the-market presumption is no different from an effort to contest any other element of the plaintiff's claim, or to establish an affirmative defense." U.S. Br. 17. According to the United States, a plaintiff need only raise common questions regarding class-wide reliance to obtain certification. *See id.* at 18, 24.

This argument conflates the question whether a plaintiff can prove the *element* of reliance—ultimately a merits inquiry—with the question whether a representative plaintiff can invoke the fraud-on-the-market *presumption* in order to show reliance on a class-wide basis, a question essential to class certification. *See Falcon*, 457 U.S. at 160–61; *Eisen*, 417 U.S. at 177–78. Petitioner acknowledges that "[t]he proper analysis under Rule 23(b)(3) is how the putative class members will attempt to prove their case." Pet. Br. 25. Here, petitioner proposes to use the *Basic* presumption, and therefore the availability of the presumption must be tested on certification. *See Basic*, 485 U.S. at 242; *IPO*, 471 F.3d at 43; *Polymedica*, 432 F.3d at 7–8; *Unger*, 401 F.3d at 321–22; *Gariety*, 368 F.3d at 363–64. That is a Rule 23 issue, not a "merits" inquiry.

The availability of the presumption must be tested at class certification, as it bears on whether and how the claim can be tried as a class. *See* Fed. R. Civ. P. 23(c)(1)(B) (certification order must set out

the "claims, issues, [and] defenses" to be adjudicated at trial); *Hohider* v. *United Parcel Serv., Inc.*, 574 F.3d 169, 202 (3d Cir. 2009). If reliance cannot be presumed class-wide via the fraud-on-the-market presumption, then the class may not be certified. *See, e.g.*, *IPO*, 471 F.3d at 43. That is because if the "elements [of a claim] include individualized inquiries that cannot be addressed in a manner consistent with Rule 23, then the class cannot be certified." *Hohider*, 574 F.3d at 184; *see also Hydrogen Peroxide*, 552 F.3d at 311 (if "proof of the essential elements of the cause of action requires individual treatment, then class certification is unsuitable") (quoting *Newton*, 259 F.3d at 172); *McLaughlin*, 522 F.3d at 223–25.

This is not, therefore, a case where merely raising common questions will suffice. Rather, a plaintiff bears the burden of showing that it can prove reliance in an aggregated proceeding and that individualized inquiries regarding this element will not predominate. Richard A. Nagareda, *Class Certification in the Age of Aggregate Proof*, 84 N.Y.U. L. Rev. 97, 132 (2009) ("What matters to class certification ... is not the raising of common 'questions' ... but, rather, the capacity of a class-wide proceeding to generate common *answers* apt to drive the resolution of the litigation").

Postponing the question whether a plaintiff is entitled to the fraud-on-the-market presumption would also implicate the Rules Enabling Act. As the Court has cautioned, Rule 23 may not be interpreted in a way that runs afoul of the Act. *See Ortiz*, 527 U.S. at 845–46; *Amchem*, 521 U.S. at 629. In particular, a class may not be certified if doing so would relieve a plaintiff of the burden of proving an element of its claim. *See, e.g.*, *Hohider*, 574 F.3d at 196; *McLaugh-*

lin, 522 F.3d at 231. Nor, for that matter, does due process countenance the elimination of any defense that would otherwise be available to a defendant in a single-plaintiff action. *See Philip Morris USA, Inc.* v *Scott*, 131 S. Ct. 1, 3–4 (2010) (Scalia, J., in chambers).

The fraud-on-the-market presumption was explicitly adopted to facilitate class certification of securities claims that the reliance requirement would otherwise preclude from such treatment. *See Basic*, 485 U.S. at 242; *Salomon*, 544 F.3d at 483. But the Court did not—and indeed *could not*—relieve a plaintiff of the ultimate burden of proving reliance. *See* 28 U.S.C. § 2072(b); *Amchem*, 521 U.S. at 629. Thus, the presumption is—and must be—rebuttable. *See Basic*, 485 U.S. at 248–49.

The only real question before the Court in this case, then, is *when* the presumption may be rebutted: at class certification or at trial? If entitlement to the presumption is not resolved at class certification, then a plaintiff comes very close to improperly "circumvent[ing] the reliance requirement" (*Cent. Bank of Denver N.A.* v. *First Interstate Bank of Denver, N.A.*, 511 U.S. 164, 180 (1994)), in violation of the Court's admonition that Rule 23 must be construed in harmony with the Rules Enabling Act. *See Ortiz*, 527 U.S. at 845. Accordingly, fraud on the market—a presumption crafted to facilitate certification—must be tested where its inapplicability would defeat certification, and not later (when it might be too late as a practical matter). *See* Resp. Br. 32–35.

4. Evidence that "severs the link between the alleged misrepresentation" and a plaintiff's decision to invest can rebut the fraud-on-the-market presumption, rendering a claim unsuitable for class treat-

ment. *Basic*, 485 U.S. at 248. Whether or not loss causation is necessarily a component of the fraud-on-the-market presumption, in many cases evidence bearing on loss causation also bears on the class-certification question of whether the "link" has been "sever[ed]." And because a court is obligated to determine if Rule 23 is satisfied before certifying a class, a plaintiff's *theory of causation* at class certification must be rigorously analyzed where such evidence is relevant to the applicability of the fraud-on-the-market presumption.

Petitioner tries to avoid this conclusion by insisting that "reliance and loss causation are distinct concepts" (Pet. Br. 42; *see also* U.S. Br. 20 (same)), but this Court disagrees. *See Stoneridge*, 552 U.S. at 160 ("reliance is tied to causation"). Indeed, *Basic* itself recognized the close tie between reliance and causation. 485 U.S. at 248; *see also Cent. Bank*, 511 U.S. at 180; *DVI*, slip op. at 33.

The Court held in *Basic* that the presumption could be rebutted by a defense showing "that the misrepresentation in fact did not lead to a distortion of price." 485 U.S. at 248. Halliburton made such a showing in this case, which petitioner failed to rebut. *See* Resp. Br. 25–27.

Contrary to petitioner's abbreviated argument on the second question presented, in reviewing the certification evidence and resolving petitioner's entitlement to the presumption the courts did not conduct an impermissible inquiry into the merits. While loss causation is an element of petitioner's substantive claim under the securities laws, the courts below determined in this case that causative evidence was also a necessary predicate to petitioner's entitlement to the fraud-on-the-market presumption (Pet. App.

6a, 115a); negating the predicate disentitled petitioner to the presumption, and therefore destroyed the basis for class certification. This is exactly the "rigorous analysis" of the Rule 23 prerequisites that this Court has required. *Falcon*, 457 U.S. at 161.

CONCLUSION

The judgment of the court of appeals should be affirmed.

Respectfully submitted.

INTEREST OF *AMICI CURIAE*

Amici are the following law professors who study, analyze, and teach the federal securities laws and their role in regulating U.S. capital markets:

1. Robert Bartlett is Assistant Professor of Law at the University of California, Berkeley School of Law.

2. Barbara Black is the Charles Hartsock Professor of Law and Director of the Corporate Law Center at the University of Cincinnati College of Law.

3. Chris Brummer is Professor of Law at the Georgetown University Law Center.

4. William J. Carney is the Charles Howard Candler Professor of Law at Emory University School of Law.

5. John C. Coffee, Jr. is the Adolph A. Berle Professor of Law at Columbia Law School.

6. James D. Cox is the Brainerd Currie Professor of Law at the Duke University School of Law.

18. Cynthia A. Williams is Professor of Law at the University of Illinois College of Law.

SUMMARY OF ARGUMENT

Time-tested economic theory and empirical data continue to support the circumscribed economic assumption underneath *Basic*'s fraud-on-the-market presumption, namely that in an open and well-developed market, prices for a security will typically change in response to a material misstatement. Moreover, this theory and data remain a strong foundation for this Court's post-*Basic* procedural architecture for evaluating market prices, market distortions upon material misstatements, and reliance (or transaction causation) in securities litigation. This architecture – a finding of an efficient market at class certification creates a rebuttable presumption of reliance followed by a more particularized and nuanced inquiry into loss causation at the merits stage – remains an appropriate way for trial courts to sift through economic evidence to evaluate first whether material misstatements distorted market prices and, later, whether these distortions proximately caused investors' economic losses.

Yet the Fifth Circuit performed radical surgery on *Basic v. Levinson*, 485 U.S. 224 (1988) in *Archdiocese of Milwaukee Supporting Fund, Inc. v. Halliburton Co.*, 597 F.3d 330 (5th Cir. 2010) [hereinafter *Halliburton*] and the earlier case of *Oscar Private Equity Investments v. Allegiance Telecom, Inc.*, 487 F.3d 261 (5th Cir. 2007) [hereinafter *Oscar*]. These cases graft onto *Basic* a requirement that, to receive class certification, investors must prove loss causation. *See Oscar*, 487 F.3d at 265 ("Essentially, we require plaintiffs to establish loss causation in order to trigger the fraud-on-the-market

presumption."). This novel condition for class certification not only conflicts with the logic of *Basic*, it presents deep problems. *Halliburton* and *Oscar* conflate reliance and loss causation, even though those are doctrinally and analytically distinct elements of a 10b-5 claim. *See Dura Pharmaceuticals, Inc. v. Broudo*, 544 U.S. 336, 342 (2005). In requiring plaintiffs to prove loss causation as a condition of class certification, *Halliburton* and *Oscar* fail to consider the predominance standard of Federal Rule of Civil Procedure 23(b)(3). Plaintiffs met this standard, as loss causation in a sufficiently efficient market presents issues that predominate with respect to all class members. *See, e.g., Schleicher v. Wendt*, 618 F.3d 679, 681 (7th Cir. 2010) ("whether the false-hoods affected the stock's price" is a common question). Nevertheless, *Halliburton* and *Oscar* effectively require that investors win a mini-trial on the merits at class-certification contrary to *Eisen v. Carlisle & Jacquelin*, 417 U.S. 156 (1974).

Halliburton and *Oscar* force a premature analysis of difficult issues of loss causation without the kind of full factual record that provides a reliable foundation for determining whether material misstatements or omissions proximately caused an economic loss to investors. *Halliburton* and *Oscar* require that, to achieve class certification, investors must prove by a preponderance of the evidence that specific misstatements or corrective disclosure caused particular stock price moves. *See Halliburton*, 597 F.3d at 341 (plaintiff is required "to demonstrate that there is a reasonable likelihood that the cause of the decline in price is due to the revelation of the truth and not the release of the unrelated negative information.") (internal quotation marks omitted); *Oscar*,

487 F.3d at 266.[1] *Halliburton* and *Oscar* thus frustrate a careful untangling of possible confounding causal factors that may explain why prices did move or did not move in response to the revelation of an earlier misstatement. If investors cannot isolate at the class certification stage the causation attributable to fraud from that caused by confounding factors, *Halliburton* and *Oscar* preclude class certification. *See Halliburton*, 597 F.3d at 336; *Oscar*, 487 F.3d at 266. Moreover, *Halliburton* and *Oscar* invite defendants to mask the price effects of corrective disclosure behind the noise of other disclosure or even fresh misstatements. Without fuller discovery, courts and investors lack the ability to uncover this camouflage.

I. Loss Causation Presents Issues that Predominate with Respect to the Proposed Class in *Halliburton*, Rendering Loss Causation an Improper Condition to Class Certification Under Rule 23.

Despite their conflation in *Halliburton* and *Oscar*, reliance and loss causation represent doctrinally distinct elements of a Rule 10b-5 claim. *See Dura*, 544 U.S. at 342.[2] This distinction reflects a basic analytical

1. "In such multi-layered loss-causation inquiries, the legal standard . . . requires that plaintiffs prove (1) that the negative "truthful" information causing the decrease in price is related to an allegedly false, non-confirmatory positive statement made earlier and (2) that it is more probable than not that it was this negative statement, and not other unrelated statements, that caused a significant amount of the decline." *Id.* (internal quotation marks omitted).

2. The common law origins of these elements of a 10b-5 claim also highlight their conceptual differences. Jill E. Fisch, *Cause for Concern: Causation and Federal Securities Fraud*, 94 Iowa L. Rev. 811, 829 (2009).

difference between reliance and loss causation that becomes apparent when comparing *Basic* and *Dura*. In proving that a well-developed and open market exists, investors establish a mechanism by which misstatements are shown to generate distortions in market prices. *See Basic*, 485 U.S. at 244. Price distortions, alone, however, do not prove that misstatements proximately caused economic losses to investors. *See Dura*, 544 U.S. at 344-45. The element of loss causation then handles the vexing questions of whether supervening causes other than the price distortion – for example, a business suffering losses unrelated to the misstatement – generated the subsequent economic losses to investors. *See Dura*, 544 U.S. at 342-43.

Yet *Halliburton*, by extending the rule of *Oscar*, conflates loss causation and reliance by effectively making loss causation a condition to a presumption of reliance. *Basic* held that investors are entitled to a presumption of reliance if they traded in the security at issue during the proposed class period in reliance on the integrity of a price set in an open and impersonal market. *See Basic*, 485 U.S. at 244, 247. As explained in Part II of this brief, to benefit from this presumption, investors must prove that the market for a particular security has the requisite informational efficiency, such that prices in that market generally respond to material information, including material misstatements. *Cf. Basic*, 485 U.S. at 247 (". . . where materially misleading statements have been disseminated into an impersonal, well-developed market for securities, the reliance of individual plaintiffs on the integrity of the market may be presumed."). Investor proof that the particular market is sufficiently efficient leads to a presumption that a material misstatement of omission distorted the market price. *See Basic*, 485 U.S. at 246-47. *Oscar*, on the other hand, requires that investors prove

the separate element of loss causation as a condition to *Basic*'s presumption and to class certification. *Oscar*'s new rule requires, in turn, proof that supervening factors other than a price distortion generated by a material misstatement or omission did not cause the economic losses to investors. *See Oscar*, 487 F.3d at 265. In his dissent in *Oscar*, Judge Dennis stated succinctly that requiring loss causation as a condition to *Basic*'s presumption of reliance "subverts the fraud-on-the-market presumption by requiring the plaintiffs to prove, as a precondition to the application of the presumption, the very facts that are to be presumed under *Basic* (i.e. that the defendant's material misrepresentation was reflected in the stock price)." *Oscar*, 487 F.3d at 274 (Dennis, J., dissenting).

Investors indeed have to prove the separate element of loss causation. *Dura*, 544 U.S. at 342. However, they must do so at the merits stage, not as a condition to class certification. *See Schleicher*, 618 F.3d at 681 (holding that "[w]hether the false-hoods affected the stock's price" is a common question, which would make class treatment appropriate under Rule 23(b)(3)). Whether a class should be certified turns on whether the proposed class meets the standard of Rule 23(b)(3), not on the policy views of courts on the *in terrorem* power of certification. *Compare id.* at 686 ("We do not think it appropriate for the judiciary to make its own further adjustment by reinterpreting Rule 23 to make likely success on the merits essential to class certification . . .") *with Oscar*, 487 F.3d at 267 ("We cannot ignore the *in terrorem* power of certification . . .").

The distinction between reliance and causation matters intensely for purposes of class certification under Rule 23(b)(3). Reliance is typically a gateway issue for class certification. As *Basic* explained, without the fraud-

on-the-market presumption, no class could have been certified in that case. *Basic*, 485 U.S. at 242 ("Requiring proof of individualized reliance from each member of the proposed plaintiff class effectively would have prevented respondents from proceeding with a class action, since individual issues then would have overwhelmed the common ones.").[3] By contrast, when reliance is presumed under *Basic*'s fraud-on-the-market theory (which involves the circumscribed economic assumption and the rigorous procedure described in Part II of this brief), loss causation presents issues that do not vary from investor to investor, but instead are common to an entire class. *See Schleicher*, 618 F.3d at 681 ("whether the false-hoods affected the stock's price" is a common question); Donald C. Langevoort, *Basic at Twenty: Rethinking Fraud on the Market*, 2009 Wis. L. Rev. 151, 185 (reliance on a distorted price is common to all class members). More particularly, questions of whether a misstatement or subsequent corrective disclosure moved or did not move the price of a security affect the class as a whole.

Plaintiffs might lose on the issue of causation at the merits if the evidence fails to establish a causal connection between Halliburton's misstatements and movements in the price of that company's stock. However, this would

---

3. The fraud-on-the-market presumption does not mean that common issues inevitably predominate with respect to the issue of reliance. In unique fact patterns, there may still be significant differences among plaintiffs of a proposed class that make certification inappropriate under the predominance standard of Rule 23. *See, e.g., In re Public Offering Sec. Litig.*, 471 F.3d 24, 43-44 (2d Cir. 2006) (precluding certification of class in which many institutional plaintiffs knew of, or participated in, alleged underwriter practices with respect to initial public offerings).

translate into a fatal weakness in the case of all plaintiffs.[4] Accordingly, under Rule 23(b)(3), common questions on the issue of loss causation predominate, and loss causation is an improper condition to the certification of a class. *See Amchem Prods., Inc. v. Windsor*, 521 U.S. 591, 623 (1997) ("The Rule 23b(3) predominance inquiry tests whether proposed classes are sufficiently cohesive to warrant adjudication by representation.").[5]

---

4. "When the concern about the proposed class is not that it exhibits some fatal dissimilarity but, rather, a fatal similarity - a failure of proof as to an element of the plaintiffs' cause of action - courts should engage that question as a matter of summary judgment, not class certification." Richard A. Nagareda, *Class Certification in the Age of Aggregate Proof*, 84 N.Y.U. L. Rev. 97, 107 (2009).

5. Though the *level* of distortion may vary over the course of a class period, any potential variance in distortion over time would affect the amount of damages, not to the plaintiff's ability to prove the elements of her case. *See Blackie v. Barrack*, 524 F.2d 891, 909 n.25 (9th Cir. 1975), *cited with approval in Basic*, 485 U.S. at 245 & 247 n.25; *In re LTV Sec. Litig.*, 88 F.R.D. 134, 142 (N.D. Tex. 1980), *cited with approval in Basic*, 485 U.S. at 244 & 246 n.24; *cf. Miller v. Asensio & Co.*, 364 F.3d 223, 232 (4th Cir. 2004) (holding that the element of loss causation is satisfied if some portion of the loss was due to fraud; the precise amount is a damages question); *Robbins v. Koger Props. Inc.*, 116 F.3d 1441, 1447 n.5 (11th Cir. 1997) (same). The requirement to prove damages is itself a distinct element of Rule 10b-5 claims. *See Dura*, 544 U.S. at 342, 15 U.S.C. § 78u-4(b)(4) (2011). A class may be certified notwithstanding the necessity for individualized damages determinations. *See McLaughlin v. Am. Tobacco Co.*, 522 F.3d 215, 231 (2d Cir. 2008). *Kohen v. Pac. Inv. Mgmt. Co. LLC & PIMCO Funds*, 571 F.3d 672, 676 (7th Cir. 2009). This Court implicitly recognized as much in *Basic*, when it held that any dissipation of artificial inflation over the course of the class period should be determined at trial. *Cf.* 485 U.S. at 249 n.29. Trial courts can determine the different damages of individual plaintiffs in a class. *Schleicher*, 618 F.3d at 682.

Under Rule 23, a class action may be maintained if Rule 23(a) is satisfied and *any* one of the three elements of Rule 23(b) is satisfied. In rejecting class certification, *Halliburton* and *Oscar* ignore the last of these three elements, the predominance standard of Rule 23(b)(3). The failure of *Halliburton* and *Oscar* to base their rulings on whether the proposed class satisfies Rule 23(b) contravenes *Eisen*, in which this Court stated, "[i]n determining the propriety of a class action, the question is not whether the plaintiff or plaintiffs have stated a cause of action or will prevail on the merits, but rather whether the requirements of Rule 23 are met." *Eisen*, 417 U.S. at 178.

II. *Basic's* Fraud-on-the-market Presumption Remains Justified, Its Limited Economic Assumption Remains Grounded in Economic Research, and Its Procedural Framework Provides Appropriate Mechanisms to Ensure that Prices in a Specific Market Would Respond to Material Information.

Halliburton and *Oscar* introduce confusion regarding the current state of economic theory and evidence on market efficiency and their implications for *Basic*'s rebuttable fraud-on-the-market presumption. We believe that Judge Easterbrook's analysis in *Schleicher*, 618 F.3d 679, reflects a well-considered and concise analysis of the rationale and circumscribed economic assumption behind *Basic*'s fraud-on-the-market presumption. Judge Easterbrook has been influential in the development of the fraud-on-the-market theory in the courts and in the academy. Langevoort, *Basic at Twenty: Rethinking Fraud on the Market*, 2009 Wis. L. Rev. at 164. Although we may not all agree with every detail of his analysis, we write to reinforce generally Judge Easterbrook's reasoned support for *Basic* and his criticism of *Oscar* in *Schleicher*.

Below, we underscore the sensible purpose for which *Basic* created the fraud-on-the-market presumption, the circumscribed economic assumption behind this presumption, and the fact that this assumption does not rise or fall on current research on the Efficient Market Hypothesis (EMH) as a general economic proposition. *See Basic*, 485 U.S. at 246 n.24. Instead, *Basic*'s limited economic assumption depends on a reasonable procedural framework for determining that prices in the market for a particular security typically change in response to new material information. Understanding the purpose of the fraud-on-the-market presumption, the limited assumption underlying the presumption, and the rigorous procedure for triggering the presumption ensures that fast-and-loose translations of descriptive research and empirical questions on the EMH do not result in ill-considered changes to time-tested legal rules. These time-tested, durable, and reasonable rules include the nuanced procedural framework created by this Court in *Basic* and radically altered by *Halliburton* and *Oscar*. This framework includes a requirement that investors prove by a preponderance of evidence that the market for the security at issue is sufficiently efficient at the class certification stage. *Cf. Basic*, 485 U.S. at 248. By proving that the market for the particular security in question has the requisite efficiency, investors both establish that a material misstatement would distort the market price and trigger the fraud-on-the-market presumption. *Cf. id.* at 247-48. Defendants can rebut this presumption. *Id.* at 248. Moreover, plaintiffs must then prove the separate element of loss causation. *See Dura*, 544 U.S. at 342-43. This procedural framework, when combined with the other requirements for a Rule 10b-5 claim, remains an appropriate way for trial courts to sift through economic evidence in Rule 10b-5 actions.

Basic held that the presence of an impersonal and well-developed market permitted a presumption that investors could rely on the integrity of the market price (not that they actually relied). *See Basic*, 485 U.S. at 245-47. This reveals the rationale for the fraud-on-the-market presumption. The Court held that the presumption facilitated investor reliance on the integrity of the market price, or, in other words, that the price was undistorted by fraud. *See id.* at 245-47. The presumption thus serves the same rationale as common law fraud rules, which allow parties to rely on representations of others without regard to their trustworthiness in order to facilitate confidence and economic exchange. *See Blackie*, 524 F.2d at 907 ("The statute and rule are designed to foster an expectation that securities markets are free from fraud - an expectation on which purchasers should be able to rely."); Langevoort, *Basic at Twenty: Rethinking Fraud on the Market*, 2009 Wis. L. Rev. at 161, Richard A. Posner, *Economic Analysis of Law* 111-14 (7th ed. 2007). The pragmatism of the presumption lies at the heart of the folksy, yet profound insight in *Basic*: "[w]ho would knowingly roll the dice in a crooked crap game?" *Basic*, 485 U.S. at 247.[6]

Basic's fraud-on-the-market presumption in turn rests on a very limited, but fundamental economic assumption, namely that, in a particular market with sufficient informational efficiency a material misstatement, typically

---

6. *Basic* was not the first time this Court created a presumption of reliance. In *Affiliated Ute Citizens v. U.S.*, 406 U.S. 128 (1972), the Court created a presumption of reliance in the case of a failure to disclose. *Id.* at 153-54. Without that judicially-created presumption, investors could offer little proof that their investment decisions would have changed but for omitted statements and much fraud would go un-checked.

affects and distorts the market price of a security (or, alternatively, prices would have changed but for a material omission). *See id.* at 246-47. Without relying on technical economic research, *Basic* assumed that when the market for a company's securities was open and developed, material misstatements would typically impact and distort the price of those securities. *See id.* If investors meet the burden of proving that a particular market is sufficiently efficient, then *Basic* creates a rebuttable presumption that the reliance element of a 10b-5 claim is satisfied. *See id.* at 248. The economic assumption that undergirds *Basic*'s holding is tightly circumscribed. *Basic* does not rest on more ambitious claims that prices in a particular market reflect some "intrinsic" value of the security in question. *In re PolyMedica Corp. Sec. Litig.*, 432 F.3d 1, 14-16 (1st Cir. 2005).[7] Nor, as we explain below, does the fraud-on-the-market presumption depend on whether prices in a particular market incorporate *all* public information or instantaneously react to information, or that exceptions to the tendency of prices to change on disclosure of material information do not exist. Nor did *Basic* premise the fraud-on-the-market presumption on an actual belief by investors that a market is efficient.[8]

---

7. *PolyMedica* explains that *Basic*'s fraud-on-the-market presumption requires courts to gauge whether prices in a particular market respond to material information, not whether prices respond "correctly" or whether they accurately reflect "fundamental value." *Id.*

8. In fact, if all investors believed either the semi-strong or strong versions of efficiency described below, they would have little incentive to trade, as they would not expect to make a profit. The informational efficiency of markets depends on a sufficient number of investors trading off the belief that they can profit off information and this trading then quickly closing any

Understanding the limited purpose of *Basic*'s presumption and the limited economic assumption on which it is based clarifies the relationship of the presumption to the EMH. This clearer understanding warns against oversimplified claims that empirical findings of exceptions to the EMH must mean that *Basic*'s fraud-on-the-market presumption is no longer reasonable. The EMH speaks to the informational efficiency of securities markets, *i.e.* the impact and speed by which information influences security prices, and comes in three forms. The "weak form" posits that current stock prices reflect all information on past price changes, the "semi-strong form" posits that stock prices reflect all publicly available information, and

---

opportunities. *See* Sanford J. Grossman & Joseph E. Stiglitz, *On the Impossibility of Informationally Efficient Markets*, 70 Am. Econ. Rev. 393, 404 (1980) (redefining EMH by showing how trading of informed investors on small information inefficiencies drives markets towards equilibrium of information efficiency).

Many courts have recognized that the fraud-on-the-market presumption does not depend on investors believing that the market meets perfect efficiency. *See Schleicher*, 618 F.3d at 685 (7th Cir. 2010) ("Short sellers play a role in aligning prices with information under any version of the efficient capital market hypothesis."); *cf. McGuire v. Dendreon Corp.*, 267 F.R.D. 690, 695 (W.D. Wash. 2010) ("The price per share reflects all the publicly available information and the beliefs of both investors like Wilczynski, who believe the stock is undervalued, and short-sellers, who believe the stock is overvalued."); *Cf. Blackie*, 524 F.2d at 907 (9th Cir. 1975) ("A purchaser on the stock exchanges may be either unaware of a specific false representation, or may not directly rely on it; he may purchase because of a favorable price trend, price earnings ratio, or some other factor. Nevertheless, he relies generally on the supposition that the market price is validly set . . .").

the "strong form" holds that prices reflect all existing information both public and nonpublic. *See* Eugene F. Fama, *Efficient Capital Markets: a Review of Theory and Empirical Work*, 25 J. Fin. 383, 414 (1970). Empirical support for the strong form of the EMH is weak, as even the most influential economists who developed the EMH admit. *See* Eugene F. Fama, *Efficient Capital Markets: II*, 46 J. Fin. 1575, 1603 (1991). The ability of insiders to profit off non-public information undermines claims of strong form efficiency. *See* Joseph E. Finnerty, *Insiders and Market Efficiency*, 31 J. Fin. 1141, 1148 (1976). However, the depth of evidence supporting the semi-strong form, which holds that prices in markets quickly impound all public information, spans several decades. *See, e.g.*, *Schleicher*, 618 F.3d at 685; Fama, *Efficient Capital Markets: II*, 46 J. Fin. at 1601-02 (1991); Tarun Chordia et al., *Evidence on the Speed of Convergence to Market Efficiency*, 76 J. Fin. Econ. 271 (2005). It is a version of this semi-strong form of the EMH that influences the *Basic* presumption. *See* Daniel R. Fischel, *Efficient Capital Markets, the Crash, and the Fraud on the Market Theory*, 74 Cornell L. Rev. 907, 911 (1989).

However, we highlight the difference between the semi-strong version of the EMH, which claims that markets generally will quickly reflect all publicly available information, and *Basic*'s sharply circumscribed economic assumption that the price for a security in a particular market that has sufficient informational efficiency will change when a defendant makes a material misstatement. *See Basic*, 485 U.S. at 248 n. 28 ("By accepting this rebuttable presumption, we do not intend conclusively to adopt any particular theory of how quickly and completely publicly available information is reflected in the market

price.").[9] Under *Basic*, market prices need not incorporate *all* public information, but only materially misleading information. *See id.* at 246-48. The reasonableness of this assumption is buttressed by the several decades of studies cited above that support the even more expansive claims of the semi-strong version of the EMH.

The reasonableness of the limited assumption in *Basic* endures notwithstanding empirical studies (grouped in a loose field called "behavioral finance") that report anomalies in the pricing of securities in some liquid markets.[10] Anomalies of interest to economists in academic

---

9. The Court held,

> We need not determine by adjudication what economists and social scientists have debated through the use of sophisticated statistical analysis and the application of economic theory. *For purposes of accepting the presumption of reliance in this case,* we need only believe that market professionals generally consider most publicly announced material statements about companies, thereby affecting stock market prices. 485 U.S. at 246 n.24 (emphasis added).

10. A number of behavioral finance scholars have posited that investor "irrationality" (sometimes called "noise trading" or "investor sentiment") accounts for discrete anomalies in which prices in liquid markets seemingly do not instantaneously reflect all publicly available information. Burton G. Malkiel, *The Efficient Market and Its Critics*, 17 J. Econ. Persp. 59, 61-72 (2003). One example of an anomaly is the "January effect," which refers to evidence that stocks experienced abnormal-risk adjusted returns in the month of January compared to the rest of the year. *See* Robert A. Haugen & Josef Lakonishok, *See The Incredible January Effect: the Stock Market's Unsolved Mystery* (1988). Should these anomalies occur, they may create discrete

opportunities for investors to profit based on price trends (an anomaly to the weak form of the EMH) or public information (an anomaly to the semi-strong form). *See* Nicholas Barberis & Richard Thaler, *A Survey of Behavioral Finance, in Handbook of the Economics of Finance Vol. 1B* 1054 (George M. Constantinides et al. eds., 2003).

Other economists have criticized the methodology used to find behavioral finance anomalies and argued that these anomalies disappear with changes in the sampling and measurement of data, including proper calculations of changes in the risk of stock. *See, e.g.*, Eugene F. Fama, *Market Efficiency, Long-term Returns, and Behavioral Finance*, 49 J. Fin. Econ. 283, 304 (1998); Eugene F. Fama & Kenneth R. French, *Multifactor Explanations of Asset Pricing Anomalies*, 51 J. Fin. 55 (1996).

In addition, both proponents of the EMH and behavioral finance scholars agree that the occurrence of many of the anomalies that would conflict with the EMH occur with much greater frequency for issuers with smaller market capitalization. *See* Barberis & Thaler, *A Survey of Behavioral Finance, in Handbook of the Economics of Finance Vol. 1B* at 1112; *see* Ronald J. Gilson & Reinier Kraakman, *The Mechanisms of Market Efficiency Twenty Years Later: the Hindsight Bias*, 28 Iowa J. Corp. L. 715, 735 (2003)("many of the long-term pricing anomalies that cut against the efficiency of market prices largely disappear when analysts control for company size"). Scholars attribute the tendency of anomalies to occur in smaller capitalization stocks with the presence of fewer arbitrageurs, sophisticated investors who bet against anomalies. Barberis & Thaler, *A Survey of Behavioral Finance, in Handbook of the Economics of Finance Vol. 1B* at 1112; Gilson & Kraakman, *The Mechanisms of Market Efficiency Twenty Years Later: the Hindsight Bias*, 28 Iowa J. Corp. L. at 734-36.

Some economists and legal scholars have described an emerging synthesis in which empirical research shows that in developed securities markets either the weak or semi-strong form

debates on the EMH may not be significant enough to undermine the limited economic assumption of *Basic*. Concededly an anomaly may create a "mispricing" that would enable an arbitrageur to earn an abnormal risk-adjusted profit. *See* Gilson & Kraakman, *The Mechanisms of Market Efficiency Twenty Years Later: the Hindsight Bias*, 28 Iowa J. Corp. L. at 723-24. Yet these mispricings may not be large enough to demonstrate that material misstatements would not affect market prices. Moreover, many of these anomalies in market prices vanish with time, presumably as traders in liquid markets recognize and exploit the opportunities to profit. *See* Malkiel, *The Efficient Market and Its Critics*, 17 J. Econ. Persp. at 80. *See also* Chordia et al., *Evidence on the Speed of Convergence to Market Efficiency*, 76 J. Fin. Econ. 271.

Even if prices in a market do not adjust quickly and precisely to new information, the critical question for *Basic*'s fraud on the market presumption is not the speed of adjustment, but rather whether a market generally reacts to material information, such that a material misstatement or omission would distort the market price. *See* Langevoort, *Basic at Twenty: Rethinking Fraud on the Market*, 2009 Wis. L. Rev. at 169-70.

Of course, any good economist will insist on empirical data to justify a claim, including one that market prices generally respond to material information, including

---

of EMH generally holds, but that anomalies and exceptions may apply from time to time. Gregory La Blanc & Jeffrey J. Rachlinski, *In Praise of Investor Irrationality, in The Law and Economics of Irrational Behavior* 542, 559-60 (Francesco Parisi & Vernon L. Smith eds., 2005) (describing behavioral finance as synthesis of empirical research on investor irrationality with widespread empirical support for the EMH).

material misstatements. So too do courts insist that plaintiffs prove every element of a 10b-5 claim. *Basic* and this Court's existing procedural framework insist on rigorous proof from plaintiffs of each element of their claim, yet require this proof in stages to allow for appropriate information gathering and minimize error in interpreting market data. Several procedural mechanisms together ensure that *Basic*'s preseumption is only available when the market for a particular security is sufficiently informationally efficient.[11]

First, plaintiffs must prove by a preponderance of the evidence at class certification that the market for a particular security typically has the requisite level of informational efficiency. *Basic* 485 U.S. at 245-47. In measuring efficiency, economists, including those who search for market anomalies, rely heavily on event studies, statistical methods that test whether specific events affected the market price of a security.[12] As a tool, event

---

11. Moreover, plaintiffs must prove damages or economic loss. Neither *Basic* nor earlier cases which created a presumption of reliance such as *Affiliated Ute* relaxed this requirement for plaintiffs. *See Basic*, 485 U.S. at 248 n.28 ("... our decision today is not to be interpreted as addressing the proper measure of damages in litigation of this kind."; *Cf. Affiliated Ute*, 406 U.S. at 154-57 (evaluating damages).

12. *See* Sanjai Bhagat & Roberta Romano, *Event Studies and the Law: Part I: Technique and Corporate Litigation*, 4 Am. L. & Econ. Rev. 141, 143 (outlining uses and proper methodology for event studies); Sanjai Bhagat & Roberta Romano, *Event Studies and the Law: Part II: Empirical Studies of Corporate Law*, 4 Am. L. & Econ. Rev. 380, 397-400 (2002) (outlining use of event studies in private securities litigation in wake of *Basic*); Fama, *Efficient Capital Markets: II*, 46 J. Fin. at 1599-1607 (summarizing results of decades of event studies as tests for EMH).

studies have gained wide acceptance in the community of economics and finance scholars, as well as by a wide range of federal courts in securities litigation. Bhagat & Romano, *Event Studies and the Law: Part II: Empirical Studies of Corporate Law*, 4 Am. L. & Econ. Rev. at 397-400. Event studies can show that a market price for a particular security typically reacts to new information, demonstrating informational efficiency. *See, e.g., In re NetBank, Inc., Sec. Litig.*, 259 F.R.D. 656, 673 n.9 (N.D. Ga. 2009). However, event studies generally work less well when other causal factors, including those intentionally introduced by defendants, may confound the impact of the event being studied.[13] (Part III of this brief discusses how this problem is exacerbated by *Halliburton*'s unique requirement that, as a condition to class certification, investors prove that specific misstatements or corrective disclosures led to specific price movements.) Lower courts also consider a series of pragmatic factors that serve as proxies for market efficiency.[14]

---

13. Event studies can lead to erroneous conclusions that particular event did not have a causal effect when other causes may mask the causal relationship. *See generally*, Vern R. Walker, *Restoring the Individual Plaintiff to Tort Law by Rejecting "Junk Logic" About Specific Causation*, 56 Ala. L. Rev. 381, 426 (2004) ("True causal relationships may be masked by the causal influence of other events and not revealed unless researchers manipulate and monitor the masking events."). *See also* Langevoort, *Basic at Twenty: Rethinking Fraud on the Market*, 2009 Wis. L. Rev. at 187.

14. Many federal courts follow *Cammer v. Bloom*, which sets forth factors for determining the requisite efficiency for the *Basic* fraud-on-the-market presumption such as (i) average weekly trading volume of a security, (ii) number of analysts covering a security, (iii) presence of market makers or arbitrageurs in a particular market, (iv) whether an issuer is eligible to file Form

Whether through event studies or the factors described above, plaintiffs must prove that markets have the requisite efficiency to trigger *Basic*'s fraud-on-the-market presumption. The case at bar does not require this Court to address the requisite level of efficiency for the fraud-on-the-market presumption of reliance nor the appropriate methods by which trial courts should determine this level of efficiency. In fact, the respondents

---

S-3 with the Securities and Exchange Commission, and (v) tests of whether a stock price has reacted to unexpected information in the past. *Cammer v. Bloom*, 711 F. Supp. 1264, 1286-87 (D.N.J. 1989). This last factor could be proven by event studies. *See, e.g., Wagner v. Barrick Gold Corp.*, 251 F.R.D. 112, 119 n.7 (S.D.N.Y. 2008). Other courts use several additional factors added by *Krogman v. Sterritt*, 202 F.R.D. 467 (N.D. Tex. 2001) including (vi) the market capitalization of the issuer, (vii) bid-ask spreads for the security, and (viii) public float, that is, the number of shares held by non-insiders. *Id.* at 471-78.

Many of these factors address the limitations that behavioral finance scholars admit exists in their study of anomalies. For example, many behavioral finance scholars believe that the active presence of arbitrageurs (a factor under *Cammer*) reduces anomalies and promotes informational efficiency. Barberis & Thaler, *A Survey of Behavioral Finance, in Handbook of the Economics of Finance Vol. 1B* at 1112. In addition, many anomalies disappear when economists study larger issuers. *Id*; *see also* Gilson & Kraakman, *The Mechanisms of Market Efficiency Twenty Years Later: the Hindsight Bias*, 28 Iowa J. Corp. L. at 734-36. Several of the factors above, including Form S-3 eligibility, market capitalization, and public float, may mean that courts are less likely to find an efficient market for those smaller issuers most likely to experience anomalies identified by behavioral finance. (In addition, the occurrence of an anomaly does not equate with a market being so informationally inefficient that material misstatements do not register in price changes).

in this case did not contest that the market for Halliburton stock was efficient. *See Halliburton*, 597 F.3d at 335 ("the parties ... do not dispute the efficiency of the market"). However, we note the many cases in which courts have ruled that investors have failed to prove that particular markets have the requisite efficiency and denied class certification. *E.g., Teamsters Local 445 Freight Division Pension Fund v. Bombardier, Inc.*, 546 F.3d 196, 210 (2d Cir. 2006) (affirming denial of certification in market for mortgage backed securities).[15]

The rebuttable nature of *Basic*'s presumption of reliance provides an second mechanism for courts to ensure the reasonableness of *Basic*'s assumption that, in an efficient market, material misstatements (or omissions) have an impact on price. This second mechanism operates by screening out cases in which, even in a well-developed, impersonal market for a security, prices may not move after material disclosures. The defendant may rebut the fraud-on-the-market presumption by "[a]ny showing that severs the link between the alleged misrepresentation and either the price received (or paid) by the plaintiff, or his decision to trade at a fair market price . . ." *Basic*, 485 U.S. at 248. The rebuttable fraud-on-the-market presumption presents an appropriate balance between continued widespread empirical support for the limited assumption

---

15. *See also In re Safety-Kleen Corp. Bondholders Litig.*, 2004 U.S. Dist. LEXIS 31099, *25 (D.S.C. Oct. 29, 2004) (decertifying class where market for bonds was not efficient); *Unger v. Amedisys, Inc.*, 401 F.3d 316, 322-325 (5th Cir. 2005) (vacating class certification for insufficient evidence of efficiency in market for securities of small cap issuer); *Freeman v. Laventhal & Horwath*, 915 F.2d 193, 199 (6th Cir. 1990) (finding a market for newly issued municipal bonds is not efficient).

of *Basic* – that, in a sufficiently efficient market, prices will generally react to material misstatements – with empirical evidence from behavioral finance of discrete cases of anomalies.

A common method of rebutting the presumption, for instance, is the so-called "Truth on the Market" defense fashioned by some lower courts. *See Schleicher*, 618 F.3d at 686-87. This defense flows from Justice Powell's statement in Basic that a defendant might rebut the fraud-on the-market presumption upon a showing that, notwithstanding a material misstatement, truthful news "credibly entered the market and dissipated the effects of the misstatements." *Basic*, 485 U.S. at 248-49. Significantly, however, those courts that consider this defense routinely address it at the summary judgment stage rather than the class certification stage and only after a defendant has put forth evidence indicating why truthful statements might have counteracted the pricing effect of the misrepresentation. *See, e.g., In re Apple Computer Sec. Litig.*, 886 F.2d 1109 (9th Cir. 1989); *see also Schleicher*, 618 F.3d at 686-87. In the process, these cases illustrate how some courts have found substantive protections for defendants in the fraud-on-the-market theory. Moreover, these cases demonstrate the procedural mechanism by which these protections are to be examined.

Yet *Oscar* misread *Basic* and transformed the defendant's right to rebut the *Basic* presumption into a requirement that plaintiffs affirmatively prove loss causation – and imposed this requirement at the class certification stage. *Oscar* reasons that *Basic*'s standard – that a defendant make "any showing that severs the link" – could be met by the mere presence of "publicly available

evidence that the corrective disclosure was buried in other bad news." *Oscar*, 487 F.3d at 265 *citing Greenberg v. Crossroads Systems, Inc.*, 364 F.3d 657 at 665 (5th Cir. 2004). Thus, under *Oscar*, a court could rule that the mere fact of a defendant making multiple simultaneous disclosures could be enough to require investors to prove the separate element of loss causation as a condition to a class being certified. *See Oscar*, 487 F.3d at 271-76 (Dennis, J., dissenting). Under no reasonable reading of *Basic*, can defendants meet the standard for rebutting the presumption "by simply asserting that a particular change in the market price could have been related to something other than the defendant's misrepresentations." *Id.* at 274-75. Again, *Oscar* overhauled *Basic*'s clear and carefully considered procedural framework.

III. Requiring a Mini-Trial on Loss Causation at Class Certification Frustrates Courts and Investors in Untangling the Effects of Mixed Statements, True and False, on Price Moves.

Loss causation creates a third, finer filter by which courts can review the causal connection between material misstatements and economic loss. Yet *Dura* clarifies the subtle, but important distinction between reliance and loss causation. If investors prove, and defendants do not rebut, that a market has sufficient efficiency, then the fraud-on-the market presumption will establish reliance, because, a material misstatement distorts the price of a security in a market with sufficient information efficiency. *Cf. Basic*, 485 U.S. at 245-47. Investors must then prove that the price distortion was the proximate cause of their economic loss. *See Dura*, 544 U.S. at 342. Even if Rule 23(b)(3) did not render loss causation inappropriate as a

condition to class certification, proof of loss causation by a preponderance of the evidence would remain an improper condition for class certification. *Halliburton* requires that, to achieve class certification, investors must prove by a preponderance of the evidence that specific misstatements or corrective disclosure caused particular stock price moves. *See Halliburton*, 597 F.3d at 335. Consequently, *Halliburton* and *Oscar* frustrate a careful untangling of possible confounding causal factors that may explain why prices did move or did not move. *See Schleicher*, 618 F.3d at 686.[16]

The facts of *Halliburton* demonstrate the unreasonableness of the requirement that investors prove loss causation at an early stage as a condition to class certification. The Fifth Circuit denied class certification because the plaintiffs did not prove that Halliburton's corrective disclosure was the cause of its share price drop. *Halliburton*, 597 F.3d at 336, 341-42, 344. *Halliburton* holds that "[b]y relying on a decline in price following a corrective disclosure as proof of causation, a plaintiff need prove that its loss resulted directly *because* of the correction to a prior misleading statement; otherwise there would be no inference raised that the original false statement caused an inflation in the price to begin with." *Id.* at 336 (emphasis in original). Thus, under *Halliburton*, unless investors can isolate, at the class certification stage, the causation solely attributable to fraud from any confounding factors, class certification is precluded.

---

16. *See* Fisch, *Cause for Concern: Causation and Federal Securities Fraud*, 94 Iowa L. Rev. at 840-842 (discussing difficulty determining causation in securities litigation).

The problem with *Halliburton* is that many other factors – some of Halliburton's own devising – could easily mask the price decline after corrective disclosure. For example, an issuer making a corrective statement may simultaneously make other negative disclosures that may move prices in the same direction as a revelation of alleged fraud. Indeed, this is precisely what happened in *Halliburton*. The court found that plaintiffs did not prove that corrective disclosure on the costs savings of a merger with Dresser caused the price drop because that disclosure was made simultaneously with "multiple pieces of negative news." *See Halliburton*, 597 F.3d at 341. The co-mingled bad news – the timing of which was completely controlled by Halliburton –included disclosures of lower than expected profits from the Dresser business, business declines in various Halliburton units, and lower than expected earnings in Halliburton's energy services group. *See id.* at 341-42.

Alternatively, the issuer's "unrelated" disclosures may, in fact, be related to the facts revealed in the corrective disclosure. In *Oscar*, the issuer revealed that it had overstated the number of telephone lines it installed, while simultaneously disclosing that it had missed analyst expectations on earnings per share and suffered higher than expected losses. *See Oscar*, 487 F.3d at 263. The court rejected class certification because plaintiffs could not isolate the effects of the corrective disclosure on telephone lines installed from the other negative disclosure. *See id.* at 266. The court ignored the very real possibility that the company's lower earnings and higher losses might in fact have stemmed from the non-existent phone lines not providing revenue.

Requiring investors in the early stages of litigation to disentangle the causal effects of various simultaneous statements a prerequisite to class certification imposes an inappropriately high, and sometimes impossible, burden on them. The Fifth Circuit supposes that investors can untangle causal effects with publicly available data and event studies. *See Oscar*, 487 F.3d at 267. However, event studies struggle to distinguish the causal effect of multiple simultaneous events on stock price.[17]

Moreover, single-firm event studies of the type used to demonstrate loss causation may very well require information obtainable only through discovery. For instance, specification of an appropriate regression equation may require the use of a multi-factor model to control for potential confounding events but identification of the appropriate factors to use (e.g., the stock returns of relevant competitors or peer firms) may be difficult to discern from public records alone. *See, e.g.*, Jonathan Klick & Robert H. Sitkoff, *Agency Costs, Charitable Trusts, And Corporate Control: Evidence from Hershey's Kiss-Off*, 108 Colum. L. Rev. 749, 806-814 (2008) (illustrating the use of a multi-factor regression model using competitor-based controls). As a result, forcing plaintiffs to rely at the class certification stage on event studies using only publicly-available data may effectively force plaintiffs to use misspecified pricing equations.

This problem may afflict investors at trial to some extent as well. However, investors would then have

17. Langevoort, *Basic at Twenty: Rethinking Fraud on the Market*, 2009 Wis. L. Rev. at 187. *See generally*, Walker, *Restoring the Individual Plaintiff to Tort Law by Rejecting "Junk Logic" About Specific Causation*, 56 Ala. L. Rev. at 426.

the benefit of discovery which would, at a minimum, allow investors to uncover evidence that the defendants manipulated the issuer's disclosure in order to conceal the effect of false statements. The discovery that comes at the merits stage is appropriate because of the perverse incentives that *Halliburton* and *Oscar* create. *Halliburton* invites defendants to mask the price effects of corrective disclosure behind the noise of other disclosure or even fresh misstatements. *Cf.* Fisch, *Cause for Concern: Causation and Federal Securities Fraud*, 94 Iowa L. Rev. at 852;[18] James C. Spindler, *Why Shareholders Want Their CEO to Lie More After Dura Pharmaceuticals*, 95 Geo. L.J. 653, 691 (2007). Without full discovery, investors have inadequate tools to uncover whether defendants made additional disclosures to camouflage the effects of corrective disclosure. This risks skewing judicial determinations of loss causation and rewarding obfuscation by defendants.

---

18. There are several ways in which defendants can time disclosure to frustrate the ability of plaintiffs to prove loss causation.

> Faced with the need to reveal their fraud, defendants can deliberately introduce additional causal factors. For example, before disclosing a fraud, corporate officials may release "unrelated" negative information that preemptively reduces stock price. This behavior is sometimes described as "walking down the stock price." Defendants also may bundle a corrective disclosure with good news that offsets the effect of the negative information on stock price. Still another alternative is to delay a corrective disclosure until immediately after market or industry bad news has caused stock prices to fall. *Id.*

A plaintiff class must still prove loss causation even amidst a "tangle of factors." *See Dura*, 544 U.S. at 342-43. However, courts can better analyze investor proof at the merits stage. Lower courts applying *Dura* insist on rigorous proof even when market-wide downturns present difficulties for plaintiffs and their experts in proving that specific material misstatements caused the economic loss. *See, e.g., In re Williams Sec. Litig. – WCG Subclass*, 558 F.3d 1130 (10th Cir. 2009) (affirming exclusion of expert testimony and awarding summary judgment against plaintiff class for failure to prove loss causation in light of market factors that included general boom and crash of telecommunications stocks).[19] Making determinations on loss causation at the summary judgment stage allows courts to conduct a more rigorous, fact-based inquiry into complex issues of causation.

In contrast, *Oscar* employs speculative theories about the efficiency of the market to cut off the inquiry at the class certification stage. *Oscar* further justifies its requirement that investors prove loss causation as a condition to certifying a class by arguing that the market may alternatively be either strong form efficient or inefficient with respect to specific types of information. *See Oscar*, 487 F.3d at 269. *Oscar* speculates that the market might be strong form efficient with respect to information on telephone line installations and thus insider trading might have corrected the market price well before the company's corrective disclosure. *See id.*

19. Moreover, a number of courts have ruled against plaintiffs in summary judgment (not in deciding to certify a class) based on the so-called "truth-on-the-market" defense described above. Although the truth-on-the-market defense is not before this Court, its adoption by lower courts indicates that market efficiency can also cut against plaintiffs on the merits.

at 269. Alternatively, *Oscar* speculates that a market might inefficiently process information on telephone line installations even though it was otherwise information efficient. *See id.* Requiring plaintiffs to prove neither of these speculative states of the market holds before a class is certified is improper.

Oscar offers no reason to believe that the market is likely to be strong form efficient (reflecting *all* public and non-public information) with respect to certain types of information like telephone line installations. Indeed, as noted above, there is scant economic evidence for strong efficiency. It is therefore inappropriate for class certification procedures to include a substantive inquiry based on the strong form. *Oscar* effectively creates a burden on investors to disprove strong form efficiency, speculating that insider trading could have changed the stock price before the corrective disclosure. *See Oscar*, 487 F.3d. at 269. Yet asking plaintiffs to disprove the effects of any insider trading would require them to prove a negative. Moreover, uncovering whether insider trading existed would be impossible without further discovery. We also note here that even though insider trading frequently is alleged in connection with market frauds, the presence of such trading may nonetheless be of insufficient volume to move the particular security the security's price. *Oscar* insists, however, that investors would not need additional discovery to prove their case. *See id.* at 267 ("Little discovery from defendants is demanded by the fraud-on-the-market regime. Its 'proof' is drawn from public data and public filings, as in this case.").[20]

---

20. Moreover, *Oscar*'s speculation is internally inconsistent. If a market were strong-form efficient, insider trading would not be profitable because the non-public information would already be

Moreover, a larger problem plagues *Oscar*'s expectation that investors prove that the market was neither inefficient nor strong form efficient with respect to certain types of information. The same capacity of confounding factors and mixed disclosure to blur the effects of particular defendant statements on particular price movements would here again frustrate the ability of plaintiffs and trial courts to untangle complex causal skeins.

Proving loss causation presents a daunting task for plaintiffs in any case. The economic analysis required by *Dura* raises substantial challenges. These challenges are raised to a new level, however, by the requirement of *Halliburton* and *Oscar* that plaintiffs provide this proof at the class certification stage. *Halliburton* and *Oscar* require plaintiffs and trial courts to perform delicate surgery, while operating in dim light without full discovery.

---

reflected in the market price. *Cf.* Finnerty, *Insiders and Market Efficiency*, 31 J. Fin. 1141, 1148 (1976).

CONCLUSION

For the foregoing reasons, the judgment of the Fifth Circuit should be reversed.

INTRODUCTION AND SUMMARY OF ARGUMENT 3

ARGUMENT 9

I. LOSS CAUSATION IS ESSENTIAL TO KEEP CLASS CERTIFICATION OF IMPLIED SECTION 10(B) ACTIONS WITHIN REASONABLE BOUNDS. 9

A. Loss Causation Is Relevant To Whether the Fraud-on-the-Market Presumption Can Be Established And Rebutted At The Class Certification Stage. 11

B. Loss Causation is Both a Merits Issue and a Class Certification Issue. 18

II. LOSS CAUSATION IS ALSO PERTINENT TO THE CLASS CERTIFICATION ISSUES OF CLASS PERIOD AND MANAGEABILITY. 26

A. Loss Causation is Essential to Class Period Issues. 26

B. Loss Causation Is Also Pertinent To Determining Whether A Proposed Plaintiff Class Action is Manageable. 29

INTEREST OF *AMICUS CURIAE*[1]

The Chamber of Commerce of the United States of America ("Chamber") is the Nation's largest federation of business companies and associations. It directly represents 300,000 members and indirectly represents the interests of over 3 million business, trade, and professional organizations of every size, in every sector, and from every region of the country. Over 96% of the Chamber's members are small businesses with 100 or fewer employees. An important function of the Chamber is to represent the interests of its members in matters before Congress, the Executive Branch, and the courts. To that end, the Chamber regularly files *amicus curiae* briefs in cases that raise issues of concern to the nation's business community, such as those involving the federal securities laws, including *Stoneridge Investment Partners, LLC v. Scientific Atlanta, Inc.*, 552 U.S. 148 (2008), *Tellabs, Inc. v. Makor Issues & Rights, Ltd.*, 551 U.S. 308 (2007), and *Dura Pharmaceuticals Inc. v. Broudo*, 544 U.S. 336 (2005).

Many of the Chamber's members are companies subject to the U.S. securities laws who would be directly and adversely affected if the Court were to hold that loss causation could not be considered at the class certification stage. Over

[1] Pursuant to this Court's Rule 37.6, *amicus curiae* affirms that no counsel for any party authored this brief in whole or in part, and no such counsel or party made a monetary contribution intended to fund the preparation or submission of this brief. No person other than *amicus curiae*, its members or its counsel made a monetary contribution to its preparation or submission.

Pursuant to Rule 37.3, *amicus curiae* states that petitioner and respondent have consented to the filing of this brief, and copies of their letters of consent are on file with the Clerk's Office.

twenty years ago, in *Basic Inc. v. Levinson*, 485 U.S. 224 (1988), the Court created the fraud-on-the-market presumption expressly to allow 10b-5 plaintiffs to bring class action claims without having to prove individual reliance. Without that presumption, as *Basic* held, most 10b-5 class actions could not be certified as individual issues would predominate. *Basic* at 242. This significantly expanded both the Rule 10b-5 implied private right of action and Rule 10b-5 class actions. However, *Basic* did provide some limits to these expansions. At the class certification stage, *Basic* (i) required plaintiffs seeking the benefit of the presumption to "allege and prove" that, among other things, the alleged misrepresentations were "material" and the market in which the securities traded was "efficient," and (ii) permitted the presumption to be rebutted by "[*a*]*ny* showing that severs the link between a [defendant's] alleged misrepresentation and ... the price received (or paid) by the plaintiff...." 485 U.S. at 248, n. 27 (emphasis added).

The result advocated by Petitioner would erase even the limits on the fraud-on-the-market presumption imposed by *Basic*. By prohibiting courts from considering loss causation evidence at the class certification stage, Petitioner's argument would render the fraud-on-the-market presumption virtually irrebuttable and thereby further expand the 10b-5 judicially-implied cause of action. This would open the door to a flood of Rule 10b-5 class action litigation to the detriment of our nation's businesses and the financial markets. Such a result cannot be reconciled with *Basic* or with *Stoneridge Investment Partners, LLC v. Scientific-Atlanta, Inc.*,

552 U.S. 148, 165-166 (2008), which held that the courts should not further expand the judicially-implied private right of action under Rule 10b-5.

INTRODUCTION AND SUMMARY OF ARGUMENT

In *Archdiocese of Milwaukee Supporting Fund, Inc. v. Halliburton Co.*, 597 F.3d 330, 341-42 (5th Cir. 2010), the Fifth Circuit Court of Appeals affirmed a lower court's decision denying class certification in a Rule 10b-5 case because the lack of any evidence of a market price impact disproved the fraud-on-the-market presumption. Specifically, the court stated that plaintiff could either prove that the price of the security was increased by the misrepresentation at the time it was made or, alternatively, prove that the price fell in response to a corrective disclosure through evidence akin to that used to show loss causation. The Court properly held that plaintiff could make neither showing. Petitioner seeks reversal of the Fifth Circuit's decision, arguing principally that because loss causation is a merits issue, it should not be considered as part of class certification. Petitioner is wrong because loss causation, like reliance, is *both* a class certification issue and a merits issue.

1. The result advocated by Petitioner – that courts are precluded from considering loss causation at the class certification stage – would expand class actions based on the Rule 10b-5 implied right of action in contravention of this Court's holdings in *Basic Inc. v. Levinson*, 485 U.S. 224 (1988) and

Stoneridge Investment Partners, LLC v. Scientific-Atlanta, Inc., 552 U.S. 148 (2008).

Basic Inc. v. Levinson,[2] significantly expanded the Rule 10b-5 implied right of action by creating a fraud-on-the-market presumption in order to permit securities fraud plaintiffs to meet class certification requirements under Fed. R. Civ. P. Rule 23. 485 U.S. at 242. *Basic* created the fraud-on-the-market presumption so that a class action might meet the predominance requirement of Fed. R. Civ. P. 23(b)(3). *Id.* ("Requiring proof of individualized reliance from each member of the proposed plaintiff class" would result in "individual issues . . . overwhelm[ing] the common ones"). To support its creation of a fraud-on-the-market presumption, the Court looked, not to the text of §10(b) and Rule 10b-5, but to an unexpressed "congressional policy" of "facilitating Rule 10b-5 litigation." *Id.* at 245.

Basic, however, expressly limited its expansion of the Rule 10b-5 private right of action by, *at the class certification stage*, (i) requiring plaintiffs seeking to benefit from the presumption to "allege and prove" that the alleged misrepresentations were material and that the securities traded in an efficient market, and (ii) permitting defendants to rebut the presumption by "[*a*]*ny* showing that severs the link between the alleged misrepresentation and . . . the price received (or paid) by the plaintiff. . . ." *Id.* at 248. Under *Basic*, establishing and rebutting the fraud-on-the-

---

[2] *Basic* was a 4-2 decision. Justices Rehnquist, Scalia, and Kennedy did not participate.

market presumption are class certification issues because, in the absence of the presumption, "individual [reliance] issues . . . overwhelm[] the common ones." *Id.* at 242.

Loss causation is directly relevant to both of these class certification inquiries in a way that other 10b-5 merits issues, such as scienter, are not. Specifically, the absence of loss causation is relevant to showing that either the alleged misrepresentation was not material or the market was not efficient – either of which independently undermines the presumption. For the same reason, evidence disproving loss causation is one showing that "severs the link between the alleged misrepresentation and . . . the price received (or paid) by the plaintiff . . . ." *Id.* at 248. It does this by proving that no event correcting that alleged misrepresentation ever moved the market price downward.

Unless the common-sense principle that what goes up must come down is repealed, the absence of loss causation disproves the presumption of reliance. When a plaintiff alleges that it paid an inflated stock price because a material misrepresentation was relied on by an efficient market – but the price never comes down due to a corrective event – this is a "showing" that rebuts the allegation of inflation in the first place.

An additional reason supports broadly interpreting *Basic*'s limitations so that the absence of loss causation disproves the presumption invented by *Basic*. This reason is that *Basic*'s presumption is inconsistent with the Court's more recent

jurisprudence against expanding implied rights of action, including 10b-5 private civil claims. *See Stoneridge Investment Partners, LLC v. Scientific-Atlanta, Inc.*, 552 U.S. 148, 166 (2008) (declining to expand Rule 10b-5 implied right of action). At a minimum, *Basic*'s presumption should be constrained, not further expanded, by construing loss causation to be relevant to disproving the presumption.

This Court already has rejected the canard that if an issue is a merits issue, it cannot also be a class certification issue. After all, *Basic* itself expressly treats establishing and rebutting the presumption of reliance as both a merits issue and a class certification issue. 485 U.S. at 230, 250. More generally, in *General Telephone Co. of the Southwest v. Falcon*, 457 U.S. 147 (1982), the Court held that the class certification decision requires a "rigorous analysis" of whether "the prerequisites of Rule 23(a) have been satisfied" which could entail "prob[ing] behind the pleadings" and deciding issues that are "*enmeshed in the factual and legal issues compromising the plaintiff's cause of action.*'" *Id.* at 160, 161. (internal citations and quotations omitted) (emphasis added); *see also Amchem Prods., Inc. v. Windsor*, 521 U.S. 591, 615 (1997) (noting that Rule 23(b)(3) "invites a close look at the case before it is accepted as a class action")(internal citation omitted); *Ortiz v. Fibreboard Corp.*, 527 U.S. 815, 845, n. 20 (1999), (noting that where there is a "likelihood that significant questions, not only of damages but *of liability and defenses of liability*, would be present, affecting the individuals in different ways," class certification may not be

appropriate)(emphasis added)(citing Advisory Committee Notes to Rule 23(b)(3)). Loss causation is such an issue.

2. Independently, loss causation is also relevant to other class certification issues such as: (i) the proper end of the class period, and (ii) whether a broad Rule 10b-5 plaintiff class is impracticable or unmanageable.

Class Period. Pursuant to Rule 23(c)(1)(B), "[a]n order that certifies a class action must define the class" and include "a readily discernable, clear, and precise statement of the parameters defining the class or classes to be certified," including the class period. Fed. R. Civ. P. 23(c)(1)(B); *Wachtel v. Guardian Life Ins. Co. of Am.*, 453 F.3d 179, 187-88 (3d. Cir. 2006). In a Rule 10b-5 case, identifying the end of the class period requires courts to determine the last date when curative events caused a price drop. Identifying the last date when, if ever, a curative event reduced the stock price is a loss causation question. *See Dura Pharm. Inc. v. Broudo*, 544 U.S. 336, 344 (2005) ("a person who misrepresents the financial condition of a corporation in order to sell its stock *becomes liable to a relying purchaser 'for the loss' the purchaser sustains 'when the facts . . . become generally known' and 'as a result' share value 'depreciate[s]'*")(emphasis added)(internal citations omitted). Absent loss causation, no class period can be defined, because it would never end, and no class can be certified.

Manageability. Under Rule 23(b)(3)(D), "likely difficulties in managing a class action" may require

that certification be denied. Although Rule 23(c)(5), allows, "[*w*]*hen appropriate*, a class [to] be divided into subclasses," a class with many subclasses may well be unmanageable. Fed. R. Civ. P. 23(c)(5) (emphasis added). Many putative 10b-5 class actions allege that curative events affected a stock's price over a long period of time. Before certifying a class action, a court would have to consider whether multiple subclasses are necessary for numerous different groups of plaintiffs who sold at various points in time before the curative events were complete, as well as for those who sold before any curative events, and those who never sold or sold after all curative events had been absorbed by the market. These subgroups and their contingency fee counsel might have conflicts, such as how fairly to divide among them any settlement proceeds, or court-ordered recovery, based on when loss causation occurred. Such a morass of subclasses could render a broad class action unmanageable. In addition to the other reasons, at the class certification stage, courts should consider loss causation on manageability issues.

ARGUMENT

I. LOSS CAUSATION IS ESSENTIAL TO KEEP CLASS CERTIFICATION OF IMPLIED SECTION 10(B) ACTIONS WITHIN REASONABLE BOUNDS.

Basic Inc. v. Levinson expanded class actions based on the Rule 10b-5 implied private right of action by permitting putative class action plaintiffs to benefit from a class-wide presumption of reliance, but only if they could "allege and prove" that: (i) the defendant made material public misrepresentations, (ii) the "shares were traded on an efficient market," and (iii) the plaintiff traded the shares "between the time the misrepresentations were made and the time the truth was revealed." *Basic*, 485 U.S. at 248, n. 27. *Basic* held that, "without the presumption [of reliance], it would be impractical to certify a class under Federal Rule of Civil Procedure 23(b)(3)" because "individual [reliance] issues then would have overwhelmed the common ones." *Id.* at 230, 242. To support its creation of the fraud-on-the-market presumption to expand the implied private civil action, the Court looked not to the text of §10(b) and Rule 10b-5. Instead, *Basic* explained that "facilitating Rule 10b-5 litigation . . . supports . . . the congressional policy embodied in the 1934 Act." *Id.* at 245.

Basic is inconsistent with the Court's recent jurisprudence against expanding implied rights of action based on policy notions. In *Stoneridge Investment Partners, LLC v. Scientific-Atlanta, Inc.*, 552 U.S. 148 (2008), the Court, recognizing that the

private right of action under §10(b) is a "judicial construct that Congress did not enact in the text of the relevant statutes" held that "[t]he decision to extend the [implied] cause of action is for Congress," not for the courts. *Id.* at 164-165. This reflected the Court's current approach, unlike *Basic*, of neither creating nor expanding implied rights of action. *See Wilkie v. Robbins*, 551 U.S. 537, 562 (2007) (no private *Bivens* action against Bureau of Land Management employees alleged to have used harassment and intimidation in attempt to force owner to grant easement); *Gonzaga Univ. v. Doe*, 536 U.S. 273, 287-91 (2002) (no private right of action created by nondisclosure provisions in Family Educational Rights and Privacy Act); *Alexander v. Sandoval*, 532 U.S. 275, 293 (2001) (no private right of action to enforce disparate-impact regulations promulgated under Title VI of Civil Rights Act of 1964).

The result advocated by Petitioner would contravene both *Stoneridge* and *Basic*. It would erode two important limitations on *Basic*'s sweeping expansion of the implied right of action: (i) the requirement that a plaintiff seeking the benefit of a fraud-on-the-market presumption "allege and prove" that the alleged misrepresentations are material and that the market for the securities is efficient, and (ii) the defendant's ability to rebut the presumption with "[a]ny showing that severs the link between [a defendant's] alleged misrepresentation and ... the price received (or paid) by the plaintiff ...." 485 U.S. at 248, n. 27. Consistent with *Stoneridge*, the Court should reject this expansion by ruling that a plaintiff cannot benefit from the fraud-on-the-market

presumption at the class certification stage where loss causation is absent.

A. Loss Causation Is Relevant To Whether the Fraud-on-the-Market Presumption Can Be Established And Rebutted At The Class Certification Stage.

In *Basic*, the Court held that a putative class-action plaintiff was entitled to a rebuttable presumption of class-wide reliance if plaintiff could "allege and prove," among other things, that (i) the alleged misrepresentations were material, (ii) "the misrepresentations would induce a reasonable, relying investor to misjudge the value of the shares" and (iii) the securities were traded in an efficient market. *Id.* at 248, n. 27. To reach this result, *Basic* embraced the "fraud-on-the-market" theory, which holds that "where materially misleading statements have been disseminated into an impersonal, well-developed market for securities, the reliance of individual plaintiffs on the integrity of the market price may be presumed" because "*most publicly available information is reflected in the market price*" and "*an investor who buys or sells stock at the price set by the market does so in reliance on the integrity of that price.*" *Id.* at 247 (emphasis added). The Court held that, in the absence of a fraud-on-the-market presumption, the predominance requirement of Fed. R. Civ. P. Rule 23(b)(3) could not be met because "[r]equiring proof of individualized reliance from each member of the proposed plaintiff class" would result in "individual issues . . . overwhelm[ing] the common ones." *Id.* at 242.

In *Dura Pharmaceuticals, Inc. v. Broudo*, 544 U.S. 336 (2005), the Court held that loss causation required proof that plaintiff's loss in share price was caused by the alleged material misrepresentation and not by other factors such as "changed economic circumstances, changed investor expectations, new industry-specific or firm-specific facts, conditions, or other events, which taken separately or together account for some or all of that lower price." *Id.* at 342-43. Under *Dura*, "a person who misrepresents the financial condition of a corporation in order to sell its stock becomes liable to a relying purchaser *for the loss the purchaser sustains when the facts . . . become generally known and, as a result, share value depreciates.*" *Id.* at 344. (citing Restatement of Torts, 548A, comment b (internal quotations omitted) (emphasis added)).

Loss causation is directly linked to whether a plaintiff can establish the fraud-on-the-market presumption. If loss causation cannot be proven because no corrective event has had a negative impact on the stock price, this tends to prove at least one of two things: (i) the alleged misrepresentation was not material in the first place, or (ii) the market was not efficient with respect to the alleged misrepresentation. Either one is sufficient to find that the fraud-on-the-market presumption does not apply. *See Basic* at 248, n. 27 (quoting with approval and adopting the Sixth Circuit's holding that "in order to invoke the presumption, a plaintiff *must allege and prove*: (1) that the defendant made public misrepresentations; (2) that the misrepresentations were material; (3) that the shares were traded on an efficient market; (4) that the misrepresentations

would induce a reasonable, relying investor to misjudge the value of the shares, and (5) that the plaintiff traded the shares between the time the misrepresentations were made and the time the truth was revealed") (emphasis added). *See also Ray v. Citigroup Global Markets, Inc.*, 482 F.3d 991, 995 (7th Cir. 2007) (affirming summary judgment because plaintiffs "have not introduced enough evidence to go forward on a fraud-on-the-market theory" where the "record affirmatively contradicts the assertion that the value of the SSOL's stock declined just when the alleged misrepresentations were revealed");[3] *Greenberg v. Crossroad Systems, Inc.*, 364 F.3d 657, 665 (5th Cir. 2004) ("to trigger the presumption plaintiffs must demonstrate that there is a *reasonable likelihood that the cause of the decline in price is due to the revelation of the truth* and not the release of unrelated negative information"); *see also* Daniel R. Fischel, *Use of Modern Finance Theory In Securities Fraud Cases Involving Actively Traded Securities*, 38 BUS. L. 1, 11 (1982) ("if there has been no such effect [on market price], it is more accurate to say that the plaintiff has not shown that there has been a fraud on the market and therefore is not entitled to recovery"); Jeffrey Oldham, *Comment, Taking "Efficient Markets" Out of the Fraud-on-the-Market Doctrine After the Private Securities*

---

[3] Petitioner argues that the Seventh Circuit's decision in *Schleicher v. Wendt*, 618 F.3d 679 (7th Cir. 2010) is contrary to the Fifth Circuit's decision below. *Schleicher* cited with approval the Seventh Circuit's prior decision in *Ray v. Citigroup Global Markets*, which held that a plaintiff's inability to prove that a curative disclosure affected market price precluded recovery under a fraud-on-the-market theory. *Id.* at 683.

Litigation Reform Act, 97 NW. U. L. REV. 995, 1034 (2003) ("whether the alleged misstatement actually affected the market [price], i.e., loss causation" is a "question at the center of the presumption of reliance").

Even assuming the presumption applies, evidence that disproves loss causation also rebuts the fraud-on-the-market presumption. Under *Basic*, the fraud-on-the-market presumption is rebuttable by, among other things, a "show[ing] that the misrepresentation in fact did not lead to a distortion of price." 485 U.S. at 248 (discussing the Sixth Circuit's decision below). Indeed, "[*a*]*ny showing that severs the link between the alleged misrepresentation and ... the price received (or paid) by the plaintiff* . . .will be sufficient to rebut the presumption of reliance." *Id.* (emphasis added).

The Second Circuit, the Circuit with the largest securities docket,[4] has recognized that the absence of loss causation rebuts the presumption of reliance. In *In re Salomon Analyst Metromedia Litigation*, for example, the Second Circuit vacated a trial court decision certifying a class where the trial court had refused to permit defendants to point to the absence of loss causation in order to rebut the presumption. Rejecting arguments similar to those advanced by Petitioner here, the Second Circuit remanded the case "to allow the district court to

---

[4] *See Morrison v. Nat'l Australia Bank Ltd.*, __ U.S. __, 130 S. Ct. 2869, 2880 (2010) (referring to a decision of the D.C. Circuit Court of Appeals that deferred to the Second Circuit "because of its preeminence in the field of securities law.")(internal citations omitted).

permit defendants the opportunity to rebut the *Basic* presumption prior to class certification" by "*arguing for example, that market price was not affected by the alleged misstatements*" or that "other statements in the 'sea of voices' of market commentary were responsible for price discrepancies." 544 F.3d 474, 485-86 (2d Cir. 2008); *see also In re Flag Telecom Holdings, Ltd. Sec. Litig.*, 574 F.3d 29, 38 (2d Cir 2009) (noting with approval that "the lower court clearly considered the in-and-out traders' ability to prove loss causation as relevant to Plaintiffs' class certification motion" and that "lower courts have an 'obligation' to resolve factual disputes relevant to the Rule 23 requirements" which is "not lessened by overlap between a Rule 23 requirement and a merits issue")(internal citations omitted).

Similarly, the Third Circuit has recognized that the absence of a price reaction when information is disclosed shows that the information was not material in the first place, thus rebutting the presumption of reliance. In *In re Burlington Coat Factory Securities Litigation*, 114 F.3d 1410, 1419, n. 8 (3d Cir. 1997), for example, then-Circuit Judge Alito explained that "the presumption of reliance [*is*] *based on the theory that in an efficient market the misinformation directly affects the stock prices at which the investor trades and thus, through the inflated or deflated price, causes injury* even in the absence of direct reliance." Although class certification was not at issue, *Burlington* held that materiality under a fraud-on-the-market theory fails where corrective disclosures had no effect on price:

> *In the context of an 'efficient' market, the concept of materiality translates into information that alters the price of the firm's stock* . . . This is so because efficient markets are those in which information important to reasonable investors (in effect, the market) is immediately incorporated into stock prices . . . *Therefore, to the extent that information is not important to reasonable investors, it follows that its release will have a negligible effect on the stock price.* In this case, plaintiffs have represented to us that the July 29 release of information had no effect on BCF's stock price. This is, in effect, a representation that the information was not material.
>
> *Id.* at 1425(emphasis added) (internal citations and quotations omitted).

See also Oran v. Stafford, 226 F.3d 275, 282 (3d Cir. 2000) ("when a stock is traded in an efficient market, *the materiality of disclosed information may be measured post hoc by looking to the movement, in the period immediately following disclosure, of the price of the firm's stock*") (Alito, C.J.).

In *In re DVI, Inc. Sec. Litig.*, Nos. 08-8033 & 08-8045, 2011 WL 1125926 (3d Cir. Mar. 29, 2011), the Third Circuit, following Judge Alito's reasoning in *Burlington* and *Oran*, joined the Second Circuit in permitting the fraud-on-the-market presumption to be rebutted at the class certification stage by evidence that a corrective disclosure did not affect

the market price of a security. *Id. at* **8.* According to the Third Circuit, there were "several reasons" for this: (i) "a demonstration the market did not assimilate information about the security into the market price . . . when an alleged corrective disclosure occurred . . . may undercut the general claim of market efficiency or demonstrate market inefficiency relating to the securities in issue" and (ii) "[i]n an otherwise efficient market, the failure of a corrective disclosure to affect market price may . . . serve as a rebuttal to the presumption of reliance because it renders the misstatement immaterial as a matter of law." *Id.*

As the Third Circuit held in *In re DVI, Inc. Securities Litigation*, the same facts that show that information was immaterial on the merits also demonstrate that the materiality required for the presumption of reliance – and thus necessary for class certification – has not been shown. *See id.* And like the Third Circuit, the Fifth Circuit has simply applied the logic of *Burlington* to the fraud-on-the-market issue both on the merits and at the class certification stage. *See Nathenson v. Zonagen, Inc.*, 267 F.3d 400, 415 (5th Cir. 2001) (agreeing with *Burlington* and noting that "although there is generally a presumption that potentially significant publicly disseminated information is reflected in the price of stock traded on an efficient market, the presumption is rebuttable, and *where the facts properly considered by the district court reflect that the information in question did not affect the price of the stock then the district court may properly deny fraud-on-the-market based recovery*")(emphasis added); *see also Oscar Private Equity Investments v.*

Allegiance Telecom, Inc., 487 F.3d 261, 265 (5th Cir. 2007) (vacating class certification order and holding that the presumption may be rebutted by "a showing that the market price would not have been affected by the alleged misrepresentations" because "in such a case the basis for finding that the fraud had been transmitted through the market price would be gone").[5]

This could be improper only if merits issues and class certification issues always must fall in different categories. As we next show, that assertion is demonstrably wrong.

B. Loss Causation is Both a Merits Issue and a Class Certification Issue.

Petitioner argues that because loss causation is a merits issue, it should not be considered at the class certification stage of a 10b-5 case. (Pet. Br. at 46). But this Court has repeatedly rejected that argument, holding that merits issues and class certification issues can overlap. Indeed, *Basic* itself addressed the application of the fraud-on-the-market rebuttable presumption of reliance as both a merits issue and a class certification issue. *See* 485 U.S. at

---

[5] To be clear, the Fifth Circuit does not require a plaintiff to establish, at the class certification stage, the "full quantification of damages" or show the exact "percentage of the [price] drop [that] was attributable to the corrective disclosure." *Oscar*, 487 F.3d at 271. Rather, the Fifth Circuit requires that plaintiffs make "some empirically-based showing that the corrective disclosure was more than just present at the scene." *Id.*

250 ("the District Court's certification of the class here was appropriate when made but is subject on remand to such adjustment, if any, as developing circumstances demand"); *see also id.* at 230 ("We granted certiorari . . . to determine whether the courts below *properly applied* a presumption of reliance in certifying the class, rather than requiring each class member to show direct reliance on Basic's statements") (emphasis added).

More generally, in *General Telephone Co. of the Southwest v. Falcon*, 457 U.S. 147 (1982), the Court held that the class certification decision requires a "rigorous analysis" of whether "the prerequisites of Rule 23(a) have been satisfied" which could entail "prob[ing] behind the pleadings" and considering issues that are "*enmeshed in the factual and legal issues compromising the plaintiff's cause of action*'" *Id.* at 160-161. (internal citations and quotations omitted)(emphasis added). *See also Amchem Prods.*, 521 U.S. 591, 615 (noting that Rule 23(b)(3) "invites a close look at the case before it is accepted as a class action")(internal citations omitted); *Ortiz v. Fibreboard Corp.*, 527 U.S. 815, 845, n. 20 (1999), (noting that where there is a "likelihood that significant questions, not only of damages but *of liability and defenses of liability*, would be present, affecting the individuals in different ways," class certification may not be appropriate)(emphasis added)(internal citations omitted).

Similarly, the comments to the 2003 Amendments to Rule 23 reflect that merits issues "relevant to making the certification decision on an

informed basis" will be considered at the class certification stage:

> [D]iscovery in aid of the certification decision often includes information required to indentify the nature of the issues that actually will be presented at trial. In this sense it is appropriate to conduct controlled discovery into the "merits," limited to those aspects relevant to making the certification decision on an informed basis.
>
> Comments to 2003 Amendments to Rule 23.

See also In re Initial Pub. Offerings Sec. Litig. 471 F.3d 24, 42 (2d Cir. 2006) (rejecting the argument that a "district judge may not weigh conflicting evidence and determine the existence of a Rule 23 requirement just because that requirement is identical to an issue on the merits" and noting that "[a] district judge is to assess all of the relevant evidence admitted at the class certification stage and determine whether each Rule 23 requirement has been met, just as a judge would resolve a dispute about any other threshold prerequisite for continuing a lawsuit")(emphasis added).

The relationship between merits issues and class certification issues may be pictured as a Venn diagram, with merits and class certification issues forming two intersecting circles. Loss causation, like reliance, occupies the space where Rule 10b-5 merits issues and class certification issues intersect. This is

because, as demonstrated above, evidence disproving loss causation is relevant to whether the fraud-on-the-market presumption can be established and/or rebutted and, in the absence of the presumption, a Rule 10b-5 claim cannot meet the predominance requirement of Rule 23(b)(3). *See Basic*, 485 U.S. at 242.

Nor does this open the door to all merits issues being considered as part of class certification in a securities or other class action. A merits issue such as scienter, unlike loss causation, has no connection to proving or rebutting the fraud-on-the-market presumption. To return to the Venn diagram illustration, scienter falls only in the circle of merits issues.

Petitioner is also incorrect that consideration of loss causation at the class certification stage would deprive class action plaintiffs of the right to a jury trial. This Court has held that nothing in the Seventh Amendment "inhibits" Congress or the Federal Rules from establishing heightened pleading requirements for raising individual issues in 10b-5 actions. *Tellabs, Inc. v. Makor Issues & Rights, Ltd.*, 551 U.S. 308, 327-28 n. 9 (2007). This is because either Congress or the Federal Rules may "prescribe[] the means of making an issue, and [only] when the issue [is] made as prescribed, the right to trial by jury accrues." *Id.* at 328 (first two sets of brackets added) (quoting *Fidelity & Deposit Co. of Md. v. United States*, 187 U.S. 315, 320 (1902)). Likewise, Rule 23(b)(3) requires the trial court to make "findings" that class issues predominate over individual issues. Fed. R. Civ. P. 23(b)(3). Only if

and when plaintiff satisfies this means prescribed by Rule 23(b)(3) for making class issues predominate, could any right to jury trial attach to any class issues.[6]

---

[6] Petitioner also claims that *Basic* held that rebuttal of the presumption is a matter for trial, not class certification. Pet. Brf. at 24. *Basic's* full comment, which appears as *dicta* in a footnote, suggests the opposite:

> We note there may be a certain incongruity between the assumption that Basic shares are traded on a well-developed, efficient, and information-hungry market, and the allegation that such a market could remain misinformed, and its valuation of Basic shares depressed, for 14 months, on the basis of three public statements. *Proof of that sort is a matter for trial, throughout which the District Court retains the authority to amend the certification order as may be appropriate.*
>
> *Basic*, 485 U.S. at 249, n. 29 (emphasis added).

Thus, even when a district court has certified a class action, and a jury trial is underway, the court should decertify when the proof at trial rebuts the presumption of reliance. *See also id.* at 250 ("[t]he District Court's certification of the class . . . is subject on remand to such adjustment, if any, as developing circumstances demand"). Moreover, *Basic, id.* at 248, cited with approval the very footnote of the Sixth Circuit's decision below that made clear that a defendant has the opportunity to rebut the presumption at the class certification stage. *See Levinson v. Basic, Inc.*, 786 F.2d 741, 750, n.6 (6th Cir. 1986) ("*A defendant can defend against this presumption of reliance in two ways* . . . First,... a defendant can rebut proof of the five elements that give rise to the presumption") (emphasis added).

The United States, in its *amicus* brief, argues that plaintiff's inability to establish loss causation has no bearing on whether reliance may be presumed because *Basic*'s focus is on "the initial transaction, not on subsequent events that might (or might not) cause the plaintiff to suffer an economic loss." (U.S. Br. at 20). To support this argument, the United States posits hypothetical scenarios in which a purchaser buys a security at a falsely inflated price and then either sells it before the truth is made public or sells it after at a lower price that results from factors other than the material misrepresentation. In both scenarios, the United States argues, the purchaser may have relied on an initial purchase price that was inflated by a misrepresentation – thereby satisfying the *Basic* presumption – and yet loss causation cannot be proven. (U.S. Br. at 22).

The United States' hypotheticals oversimplify because they assume the unusual situation where the putative class plaintiff sells before any event corrected the alleged misrepresentation. In reality, such a plaintiff could not be certified as a class representative because it would both suffer no injury and therefore lack standing and be an inadequate and atypical representative. *See* Fed. R. Civ. P. 23(a). *Dura* holds that a plaintiff who sells before a corrective event tied to the challenged misrepresentation has not been injured. *Dura Pharm. Inc. v. Broudo*, 544 U.S. 336, 342 (2005). An uninjured plaintiff has neither standing nor satisfies adequacy and typicality. *Blum v. Yaretsky*, 457 U.S.

991, 999-1000 (1982); *Amchem Prods.*, 521 U.S. at 626. The typical putative class plaintiff has never sold, or sold only after what it claims was the corrective event.

Even assuming that the United States is correct in its atypical hypotheticals, this would simply mean that the absence of loss causation will not automatically destroy the fraud-on-the-market presumption in *all* cases. If, at the class certification stage, such unusual putative class plaintiffs can point to other facts demonstrating that they purchased the security at a falsely inflated price in an efficient market, even though no corrective event ever caused the price to decrease, plaintiffs may be able to establish the presumption of reliance despite the absence of loss causation. But, as a practical matter, a plaintiff who cannot show that any corrective event resulted in a price movement *at any time* will rarely, if ever, be able to show that, at the time of the purchase, the price of the stock was inflated by an alleged material misrepresentation in an efficient market. Rather, in the vast majority of cases, the absence of loss causation will constitute a "showing that severs the link between the alleged misrepresentation and . . . the price received (or paid) by the plaintiff . . . ." *Basic*, 485 U.S. at 248. Therefore, the fraud-in-the-market presumption will fail, and class certification will be denied because individual issues predominate.

Any other result would overburden the federal courts and the securities markets with improper class actions. A rule that prohibited courts from considering loss causation at the class certification

stage would result in plaintiff classes being certified without the "rigorous analysis" required by *General Telephone Co.*, 457 U.S. 147, 161 (1982), and would shear the fraud-on-the-market presumption created by *Basic* of its own limits.

Such a result also would, contrary to *Stoneridge*, increase the "intense pressure to settle" that class actions create and permit "plaintiffs with weak claims to extort settlements from innocent companies" to the detriment of our economy. *Stoneridge*, 552 U.S. at 149; *In re Rhone-Poulenc Rorer, Inc.*, 51 F.3d 1293, 1298 (7th Cir. 1995) (Posner, J.) (noting that class action defendants are "under intense pressure to settle . . . Judge Friendly, who was not given to hyperbole, called settlements induced by a small probability of an immense judgment in a class action 'blackmail settlements'"). *See also* S. Rep. No. 109-14, at 20 (2005), reprinted in 2005 U.S.C.C.A.N. 11, 21 ("Hence, when plaintiffs seek hundreds of millions of dollars in damages, basic economics can force a corporation to settle the suit, even if it is meritless and has only a five percent chance of success. Not surprisingly, the ability to exercise unbounded leverage over a defendant corporation and the lure of huge attorneys' fees have led to the filing of many frivolous class actions."); *Blue Chip Stamps v. Manor Drug Stores*, 421 U.S. 723, 740 (1975) (even a weak securities fraud complaint "has a settlement value to the plaintiff out of any proportion to its prospect of success at trial"). Thus, both *Basic* and *Stoneridge* support consideration of loss causation at the class certification stage.

II. LOSS CAUSATION IS ALSO PERTINENT TO THE CLASS CERTIFICATION ISSUES OF CLASS PERIOD AND MANAGEABILITY.

Loss causation is not only relevant at the class certification stage to the fraud-on-the-market presumption. Loss causation is also independently relevant to other class certification issues: (i) *class definition* -- whether the putative class period has an identifiable end; and (ii) *manageability* -- whether, where there are allegedly multiple successive corrective events and corresponding price drops, a broad plaintiff class would be unmanageable.

A. Loss Causation is Essential to Class Period Issues.

Loss causation is essential to deciding the class certification issues of class definition and class period. Fed. R. Civ. P. 23(c)(1)(B) provides that "an order that certifies a class action *must define the class*, and the class claims, issues, or defenses." Under Rule 23(c)(1)(B), the order certifying a class "must include (1) a *readily discernible, clear, and precise statement of the parameters defining the class or classes to be certified*, and (2) a readily discernible, clear, and complete list of the claims, issues or defenses to be treated on a class basis." *Wachtel v. Guardian Life Ins. Co. of Am.*, 453 F3d 179, 187-188 (3rd Cir. 2006)(emphasis added); *see also In Re Pharm. Indus. Average Wholesale Price Litig.*, 588 F.3d 24, 39 (1st Cir. 2009) ("Rule 23(c)(1)(B) explains the contents of a certification order: the order *must clarify and detail the identity of a class* and the class

claims, issues, or defenses in a class action")(emphasis added). Indeed when a class is certified under 23(b)(3), the court must provide class members with "the best notice that is practicable under the circumstances" which must "clearly and concisely state," among other things, "(i) the nature of the action; (ii) *the definition of the class certified*; [and] (iii) the class claims, issues, or defenses." Fed. R. Civ. P. 23(c)(2)(B)(emphasis added).

A class cannot be defined without identifying the class period – when the plaintiff class begins and *ends*. *See In re Omnicom Group, Inc. Sec. Litig.*, No. 02 Civ. 4483, 2007 WL 1280640, *3 (S.D.N.Y. April 30, 2007) (class certification "concerns definition of the specific class, such as class claims, issues, defenses, and *the specific time period that the class covers*")(emphasis added). In a Rule 10b-5 class action, the class period begins with the first material misrepresentation or omission and ends when the market is "cured," – *i.e.*, "when the full truth has been disclosed to the market and the natural market forces have had a reasonable period of time to receive, digest and reflect the bad news in the market price of the security." *In re Oxford Health Plans, Inc. Sec. Litig.*, 191 F.R.D. 369, 378 (S.D.N.Y. 2000); *see also In re Fed. Nat'l Mortgage Ass'n Sec. Litig.*, 247 F.R.D. 32, 38-40 (D.D.C. 2008) (ending class period on date defendant disavowed financial statements causing a significant price drop); *In re Ribozyme Pharm., Inc. Sec. Litig.*, 205 F.R.D. 572, 579 (D. Colo. 2001) (class period ends when "curative information is publicly announced or otherwise effectively disseminated into the market"); *In re Sun Microsystems, Inc. Sec. Litig.*, No. C-89-20351-RPA,

1990 WL 169140, at *8 (N.D. Cal. Aug. 20, 1990) (the class period ends when "completely" "curative information is publicly announced or otherwise effectively disseminated").

Identifying the end of the class period requires identifying the curative event that effected a complete cure of the market price. That is also a loss causation issue. *See Dura*, 544 U.S. at 344 ("a person who misrepresents the financial condition of a corporation in order to sell its stock *becomes liable to a relying purchaser 'for the loss' the purchaser sustains 'when the facts . . . become generally known' and 'as a result' share value 'depreciate[s]'*") (emphasis added); Steven Serajeddini, *Note, Loss Causation and Class Certification*, 108 MICH. L. REV. 255, 269 (2009) ("[b]ecause loss causation defines the class, and the plaintiff bears the burden of showing that a class satisfies Rule 23, the plaintiff must demonstrate loss causation at class certification"). Where there is never a price drop resulting from a curative event, an end point for the class period cannot be identified and class certification must be denied.

This is illustrated by *In re Credit Suisse First Boston Corp. (Lantronix, Inc.) Analyst Sec. Litig.*, 250 F.R.D 137, 148 (S.D.N.Y. 2008). In *Lantronix*, plaintiffs alleged that a stock analyst's reports violated Rule 10b-5 because they touted the company's stock as a buy even though the analyst held unexpressed reservations about the company. At the class certification stage, Plaintiffs argued that the class period ended on September 12, 2002, when the New York Times ran an article revealing that the

analyst had "advised investors to buy shares of a company that he acknowledged in an email message were unworthy of purchase," and pointed to a significant drop in the company's stock price on the same day. 250 F.R.D. at 139. After analyzing the likely causes of the drop in the company's stock price on that day, the court declined to certify the class because other bad news about the company was released for the first time on September 12, 2002 that, the court determined, was the more likely cause of the decline in market price on that day. *Id.* 149. Consequently, the trial court found that there was "insufficient evidence of market impact at the close of the Class Period" to end the class period and denied class certification. *Id.* at 148. *Lantronix* illustrates that the need to define and end a class period provides an independent basis to consider loss causation when a 10b-5 plaintiff seeks class certification.

B. Loss Causation Is Also Pertinent To Determining Whether A Proposed Plaintiff Class Action is Manageable.

Fed. R. Civ. P. Rule 23(b)(3)(D) expressly requires courts to consider "the likely difficulties in managing a class action" as part of the class certification determination. *See Eisen v. Carlisle & Jacquelin*, 417 U.S. 156, 164 (1974) (noting that the manageability requirement "encompasses the whole range of practical problems that may render the class action format inappropriate for a particular suit"). A class should only be certified where "a class action would achieve economies of time, effort, and

expense, and promote . . . uniformity of decision as to persons similarly situated, without sacrificing procedural fairness or bringing about other undesirable results." *Amchem Prods.*, 521 U.S. at 615 (quoting Advisory Committee Notes to the 1966 Rule 23 amendments). In a fraud-on-the-market case, courts may properly consider loss causation during the class certification stage in order to determine whether a broad plaintiff class is manageable, efficient, and fair.

For example, in a case where multiple curative events allegedly occurred over a period of time, the certification of a single broad plaintiff class may be unmanageable and inefficient. Purchasers and sellers of the stock at different times will have different reliance and loss causation issues, which is certainly pertinent to the predominance and manageability requirements. *See* John C. Coffee, Jr. *Securities Litigation: The Year Ahead*, 245 N.Y.L.J. 5 (Jan. 20, 2011) ("in a case where there was a multi-year class period and where multiple statements were alleged to be inaccurate and multiple corrective disclosures were made, the market's response to each such corrective disclosure represents a distinct issue for purposes of Rule 23(b)(3)'s predominance [requirement]").

Indeed, if a class were certified in such circumstances, conflicts may well emerge among subgroups who sold their stock at various points in time throughout the class period. Some will have sold before any curative events occurred, some before curative events were complete, some after all curative events had been absorbed by the market,

and some will never have sold. Inter-class conflicts could exist, for example, as to how fairly to divide any settlement proceeds. Such potential conflicts are relevant to whether a broad plaintiff class is unmanageable or inefficient. *See Amchem Prods.*, 521 U.S. at 626 (affirming denial of class certification where, among other things, "the interests of those within the single class are not aligned").

Rule 23(c)(5) permits, "[*w*]*hen appropriate*, a class [to] be divided into subclasses that are each treated as a class under this Rule." Fed. R. Civ. P. 23(c)(5). *See e.g.*, *Ohman v. Kahn*, No. 87 Civ. 7117, 1990 U.S. Dist. LEXIS 7781, *4-5 (S.D.N.Y. June 27, 1990) (creating three subclasses based on when class members purchased their shares). But a proposed class action that might need multiple subclasses – and thus, multiple sets of attorney fees in the event of a settlement or judgment for plaintiff – would be less manageable and efficient than the typical class action that has no subclasses. A trial court should thus consider whether loss causation-related differences among subgroups within a broad class renders a proposed class unmanageable, inefficient, or unfair.

CONCLUSION

The decision of the court of appeals should be affirmed.

Respectfully submitted,

INTEREST OF *AMICUS CURIAE*[1]

Amicus curiae DRI—the Voice of the Defense Bar is an international organization that includes more than 23,000 attorneys involved in the defense of civil litigation. DRI is committed to enhancing the skills, effectiveness, and professionalism of defense attorneys. Because of this commitment, DRI seeks to address issues germane to defense attorneys, to promote the role of the defense lawyer, to improve the civil justice system, and to preserve the civil jury system. DRI has long been a voice in the ongoing effort to make the civil justice system more fair, efficient, and — where national issues are involved — consistent.

To promote these objectives, DRI participates as *amicus curiae* in cases raising issues of importance to its members, their clients, and the judicial system. This is just such a case, because DRI members are frequently involved as counsel in securities-fraud litigation.

In *Oscar Private Equity Investments v. Allegiance Telecom, Inc.*, 487 F.3d 261 (5th Cir. 2007), the Fifth Circuit properly applied the efficient-capital-markets hypothesis to hold that securities-fraud plaintiffs

---

[1] Pursuant to Supreme Court Rule 37.6, *amicus curiae* states that no counsel for any party authored this brief in whole or in part and that no entity or person, aside from *amicus curiae*, its members, and its counsel made any monetary contribution towards the preparation and submission of this brief. Pursuant to Supreme Court Rule 37.3(a), *amicus curiae* certifies that counsel of record for both parties have filed letters with the Clerk giving blanket consent to the filing of *amicus* briefs.

seeking class certification based on *Basic*'s presumption of reliance must show that the alleged misrepresentation actually affected the market price of the stock. In contrast, Petitioner's proposed rule would permit class certification even in the face of evidence that the alleged misrepresentation did *not* affect the stock price. The Court should affirm the decision below.

INTRODUCTION AND SUMMARY

Under a traditional Rule 23 analysis, securities-fraud suits would not be subject to class certification because individual issues of reliance would predominate over common issues. But this Court in *Basic, Inc. v. Levinson*, 485 U.S. 224 (1988), approved the use of a rebuttable presumption of reliance to make class certification possible. Many of Petitioner's (and the supporting *amici*'s) arguments misapprehend the nature of that rebuttable presumption, which is a presumption of reliance, not a presumption that the alleged misrepresentations affected the market. And the presumption of reliance is reasonable only if (1) the market is efficient and (2) the misrepresentation actually affected the market price. 485 U.S. at 247-48. If the misrepresentation did not actually move the market, then there is no reasonable basis to presume reliance. *Basic* cannot be read to allow a presumption of reliance based solely on evidence of general market efficiency.

Moreover, Petitioner (and its supporting *amici*) misunderstand the rule articulated in *Oscar* and applied in this case. The Fifth Circuit's rule is the logical result of the reasoning in *Basic* and a

straightforward application of Rule 23. If plaintiffs cannot present evidence that the alleged misrepresentation actually affected the stock price, then they cannot invoke *Basic*'s presumption of reliance. And if plaintiffs cannot invoke that presumption, then class-certification is not appropriate. Therefore, the correct standard is the one applied by the Fifth Circuit here and in *Oscar*, not the Seventh Circuit's standard in *Schleicher v. Wendt*, 618 F.3d 679 (7th Cir. 2010).

ARGUMENT

A. A showing of actual market movement is required to invoke *Basic*'s rebuttable presumption of reliance in a defrauded-buyer case.

The Court in *Basic* stated that reliance "provides the requisite causal connection between a defendant's misrepresentation and a plaintiff's injury" in securities-fraud cases. *Basic, Inc. v. Levinson*, 485 U.S. 224, 243 (1988). But if each member of a proposed class had to prove reliance, then individual issues would "overwhelm[]" common issues, and class certification would be improper. *Id.* To overcome this hurdle to class certification, securities-fraud plaintiffs generally try to invoke the rebuttable presumption of reliance based on the efficient-capital-markets hypothesis that the Court first approved in *Basic*. *Id.* at 250.[2] In approving the use of the

---

[2] The rebuttable presumption of reliance is sometimes referred to as the "fraud-on-the-market presumption." *E.g.*, *Teamsters Local 445 Freight Div. Pension Fund v. Bombardier Inc*, 546 F.3d 196, 199-200 (2d Cir. 2008); *Binder v. Gillespie*,

rebuttable presumption, the Court relied on a description of the efficient-capital-markets hypothesis from an opinion that Judge Higginbotham authored as a district court judge. *Id.* at 244 (quoting *In re LTV Sec. Litig.*, 88 F.R.D. 134, 143 (N.D. Tex. 1980) (Higginbotham, J.)).

The efficient-capital-markets hypothesis postulates that, in an efficient market, the price of a security will reflect all material, publicly available information. *Basic*, 485 U.S. at 241-42. The hypothesis can therefore support a rebuttable presumption that market participants relied on all material, publicly available information, including the alleged misrepresentations. *Id.* In essence, *Basic*'s rebuttable presumption of reliance is an accommodation that allows securities-fraud plaintiffs to obtain class certification where it would otherwise be impossible.

The Court in *Basic* recognized that the presumption of reliance could be rebutted by "*any showing* that severs the link between the alleged misrepresentation and either the price received (or paid) by the plaintiff or his decision to trade at a fair market price." *Id.* at 248 (emphasis added). The Court cited several examples of evidence that would rebut the presumption, including evidence that the misrepre-

---

184 F.3d 1059, 1064 (9th Cir. 1999); *Ockerman v. May Zima & Co.*, 27 F.3d 1151, 1158 (6th Cir. 1994), Petitioner's Br. at 23. But this phrase is a misnomer, because it suggests that the presumption at issue relates to the impact of the alleged misrepresentations on the market. A better short-hand reference is "presumption of reliance" because it more accurately describes what has to be presumed in order to make the requisite causal connection

sentation did not affect the market price, evidence that the truth entered the market and dissipated the effect of the misrepresentation, and evidence that plaintiffs acted without relying on the integrity of the market. *Id.* at 248-49.

The plaintiffs in *Basic* were allegedly defrauded sellers of stock. *Id.* at 227-28. Since the market was efficient, under the efficient-capital-markets hypothesis, it could be presumed that the proposed class members sold their shares at a price that was based at least in part on the denials that merger discussions were taking place. *Id.* at 247. This presumption provided the causal link between the alleged misrepresentations and the plaintiffs' injuries. As articulated by the Court's earlier decision in *Affiliated Ute Citizens v. United States*, an allegedly defrauded seller's injury is the difference between the price received and the "fair value of what ... would have been received had there been no fraudulent conduct ...." 406 U.S. 128, 155 (1972). Therefore, the presumption that the plaintiffs sold their stock based on the defendants' misrepresentations links those misrepresentations to the injury. And the presumption could be rebutted by any showing that severed the link between the misrepresentation and that injury.

Here, and in *Oscar*, the plaintiffs were allegedly defrauded buyers, not sellers. *Archdiocese of Milwaukee Supporting Fund, Inc. v. Halliburton Co.*, 597 F.3d 330, 334 (5th Cir. 2010); *Oscar Private Equity Invs. v. Allegiance Telecom, Inc.*, 487 F.3d 261, 263 (5th Cir. 2007). Under the Private Securities Litigation Reform Act (PSLRA) and *Dura Pharmaceuticals, Inc. v. Broudo*, 544 U.S. 336

(2005), an allegedly defrauded buyer's injury is different than an allegedly defrauded seller's. Merely purchasing the stock at an inflated price is not sufficient to show injury. In cases involving allegedly defrauded buyers, there is a separation between the time the investor acts and the time the relevant economic loss is measured. While the Court did not purport to comprehensively address proximate cause or loss causation in *Dura*, the Court specifically held that an "'artificially inflated purchase price' is not itself a relevant economic loss." 544 U.S. at 346. The rationale for the Court's ruling was that at best "the higher purchase price will *sometimes* play a role in bringing about a future loss." *Id.* at 343. Instead, the relevant economic loss cannot be measured until at least after the "truth" is revealed to the market. *Id.*

In other words, in cases involving allegedly defrauded buyers, the presumption of reliance is that the class members purchased stock in reliance on the integrity of the market, but the market price was inflated by the misstatements. To complete the required causal connection between the alleged misstatements and the plaintiffs' injuries, the class members must have then continued to rely on the integrity of the market while holding the stock. They then suffer a loss when the truth enters the market and the market price declines.

Therefore, in cases of allegedly defrauded buyers, the required causal connection between the misrepresentation and a plaintiff's injury must extend beyond a plaintiff's decision to purchase the stock. It must also encompass the plaintiff's participation in the market through the time that the plaintiff suf-

fers an economic loss as defined in *Dura*. As a result, the efficient-market hypothesis can support the presumption of reliance only if: (1) the market is continuously efficient from the time of the purchase at the inflated price until the relevant economic loss is sustained; and (2) there is a market loss at the time the truth is revealed.

The first point is obvious. Normally in an efficient market, there will be both a statistically significant stock price increase in response to a material misstatement and a statistically significant stock price decrease when the market learns the truth. For the requisite causal connection to exist, the misstatement must continue to affect the efficient market's price for the stock until the sale or other disposition occurs and the plaintiff sustains an economic loss.

The second point is less obvious. In an efficient market, proof that revelation of the truth actually caused a stock price decrease establishes that the prior misstatement still is material and has caused a market loss. But it also establishes (or confirms) that the misstatement artificially inflated (or propped up) the stock price in the first place. If, however, there is no adverse market reaction to the revelation of the truth, then the causal connection has been broken, because there is no basis to presume that the misstatement caused any actual economic loss to the proposed class members. Under those circumstances, applying the presumption would directly contradict the efficient-capital-markets hypothesis on which it is based.

B. The Fifth Circuit cases applying the presumption of reliance are consistent with *Basic*, the PSLRA, and *Dura*.

1. In *Nathenson*, the Fifth Circuit correctly held that the presumption of reliance is not applicable unless the alleged misrepresentations actually affected the stock price.

In *Nathenson v. Zonagen, Inc.*, a case involving allegedly defrauded buyers that predates *Dura*, the Fifth Circuit addressed the need to show that the alleged misrepresentation affected the market price. 267 F.3d 400 (5th Cir. 2001). There, the defendants asserted that the presumption of reliance based on the efficient-capital-markets hypothesis was improper because the alleged misrepresentations did not cause the stock price to increase. *Id.* at 413. The district court agreed, reasoning that because the alleged misrepresentations did not impact the stock price, they were immaterial and plaintiffs did not rely on them. *Id.* at 414. This reasoning was based, in part, on the Third Circuit's opinion in *In re Burlington Coat Factory Securities Litigation*, 114 F.3d 1410 (3d Cir. 1997) (Alito, J.).

The Fifth Circuit generally agreed with the Third Circuit's reasoning about the importance of impact on the stock price. 267 F.3d at 414-15. But the Fifth Circuit concluded that the reasoning applied more appropriately to reliance than to materiality. *Id.* at 415. The Fifth Circuit reasoned that "[i]f the market price was not actually affected by the statement, reliance on the market price does not *of itself* become reliance on the statement." *Id.* at 419 (emphasis in

original). Therefore, if "the information in question did not affect the price of the stock then the district court may properly deny fraud-on-the-market based recovery." *Id.* at 415.

Significantly, the Fifth Circuit further recognized that a fraudulent misstatement might not always cause an increase in the stock price:

> For example, if the market believes the company will earn $1.00 per share and this belief is reflected in the share price, then the share price may well not change when the company reports that it has indeed earned $1.00 per share even though the report is false in that the company has actually lost money (presumably, when that loss is disclosed the share price will fall).

Id. at 419. Because there were no such allegations in *Nathenson*, the Fifth Circuit did not explore the issue further. *Id.* ("[N]o such special circumstance is alleged or even hinted at here.").

2. In *Greenberg*, the Fifth Circuit explained how a securities-fraud plaintiff can invoke the presumption by showing that the efficient market reacted when the truth became public.

Three years later, the Fifth Circuit did address the "special circumstance" identified in *Nathenson*. Seeking to apply the presumption of reliance, the plaintiffs in *Greenberg v. Crossroads Systems, Inc.* attempted to show that the alleged misrepresentations fraudulently inflated the stock price by

relying on a decrease in the stock price when the alleged truth was revealed. 364 F.3d 657, 660 (5th Cir. 2004). The Fifth Circuit observed that impact on stock price "ordinarily" has been shown by an increase in price after the misrepresentation was made. *Id.* at 665. The court also observed that impact also can be shown inferentially by a decrease in the stock price when the alleged truth was revealed. *Id.* But the inference of impact does not attach to all negative information.

Instead, such an inference is warranted only where the misrepresentation "was related to the statement causing the decrease." *Id.* Otherwise, "the invocation of the presumption of reliance would be based solely on speculation." *Id.* In sum, the court held that

> in order to show that a stock's price was actually affected through evidence of a significant price decrease following the revelation of the alleged "truth" of earlier false statements, plaintiffs must demonstrate: (1) that the negative "truthful" information causing the decrease in price is related to an allegedly false, non-confirmatory positive statement made earlier and (2) that it is more probable than not that it was this negative statement, and not other unrelated negative statements, that caused a significant amount of the decline.

Id. at 666.

This reasoning is consistent with the efficient-market hypothesis and with *Basic*'s recognition that

the fraud-on-the-market theory can apply only when the alleged misrepresentation affected the stock price. When plaintiffs choose to rely on inference rather than on direct evidence of such impact, the inference should be reasonable. And if the negative information is not related to the alleged prior misrepresentation, then there can be no reasonable inference that the misrepresentation affected the stock price.

3. In *Unger*, the Fifth Circuit held that securities-fraud plaintiffs seeking class certification must produce evidence of their entitlement to the presumption of reliance.

One year after *Greenberg*, the Fifth Circuit addressed the evidentiary burden on plaintiffs seeking class certification. *Unger v. Amedisys, Inc.*, 401 F.3d 316, 321 (5th Cir. 2005). The court first noted this Court's direction that "[c]lass certification hearings should not be mini-trials on the merits of the class or individual claims." *Id.* at 321 (citing *Eisen v. Carlisle & Jacquelin*, 417 U.S. 156, 177-78 (1974)). But the Fifth Circuit also observed that "[t]he plain text of Rule 23 requires the court to 'find,' not merely assume, the facts favoring class certification." *Id.* (quoting Fed. R. Civ. P. 23(b)(3)). The court also collected cases from other circuits that applied "rigorous, though preliminary, standards of proof to the market efficiency determination." *Id.* at 322 (citing cases from the Third, Fourth, Seventh, and Ninth Circuits). Therefore, the court concluded that

> When a court considers class certification based on the fraud on the market theory, it must engage in thorough analysis, weigh the relevant factors, require both parties to justify their allegations, and base its ruling on admissible evidence. Questions of market efficiency cannot be treated differently from other preliminary certification issues. Courts cannot make an informed decision based on bare allegations, one-sided affidavits, and unexplained Internet printouts.

Id. at 325.

4. In *Oscar*, the Fifth Circuit correctly applied *Basic*, *Nathenson*, *Greenberg*, and *Unger* to determine that proof of market effect is required at the class-certification stage to invoke the presumption of reliance.

In *Oscar Private Equity Investments v. Allegiance Telecom, Inc.*, the Fifth Circuit considered the presumption of reliance in a class action involving allegedly defrauded buyers in an opinion by Judge Higginbotham. 487 F.3d 261 (5th Cir. 2007) (Higginbotham, J.). At the class-certification hearing, the plaintiffs made no attempt to establish a connection between the alleged misrepresentations and their injury. *Id.* at 271. Instead, they argued that the defendants had no right to contest the applicability of the rebuttable presumption of reliance at the class certification stage. *Id.* at 269. The district court agreed, and certified the proposed class. *Id.* at 262.

The Fifth Circuit granted permission to appeal,

and rejected that argument. *Id.* at 266. The court first noted that subtle changes to Rule 23 recognized the importance of a rigorous analysis of the requirements for class certification. *Id.* at 267. Indeed, as the court observed, the notes to the 2003 amendments advise that "[a] court that is not satisfied that the requirements of Rule 23 have been met should refuse certification until they have been met." *Id.* (citing Fed. R. Civ. P. 23 Advisory Committee Notes to the 2003 Amendments). The court also noted that the adoption of the PSLRA was a "less-subtle" recognition by Congress that "a district court's certification order often bestows upon plaintiffs extraordinary leverage, and its bite should dictate the process that precedes it." *Id.*

Following the principles embodied in the amendments to Rule 23 and the PSLRA, the Fifth Circuit concluded that application of the efficient-capital-markets hypothesis *must* be addressed at the class-certification stage. *Id.* at 268. The court also concluded that because the district court has to "find" facts to support class certification, plaintiffs must prove the facts supporting entitlement to the presumption of reliance by a preponderance of the evidence. *Id.*

The Fifth Circuit then applied *Greenberg*'s holding that the presumption of reliance can be invoked only with proof of market impact. *Id.* at 266. And a decrease in stock price following the release of the negative news can show market impact only if the negative news is related to the prior alleged misrepresentation. Otherwise, under the efficient-capital-markets hypothesis, there is no basis to

presume that the misstatement affected the stock price.[3]

Applying *Unger*, the Fifth Circuit also held that the plaintiffs had a burden to establish their entitlement to the rebuttable presumption of reliance. *Id.* at 268-69. The court found that the class proponent had the burden to show market effect under *Greenberg*. *Id.* at 265. The court, however, acknowledged that often the class opponent affirmatively seeks to sever a link in the causal chain by pointing out a lack of price movement in response to a misrepresentation or by producing evidence that the alleged "corrective" disclosure was one of multiple pieces of negative news. *Id.* In either case, the presumption is rebutted "on arrival." *Id.*

The court also observed that because of the nature of the evidence related to this issue, the placement of the burden of proof makes little practical difference. *Id.* Because the focus of the inquiry is the market's reaction to information, the evidence needed for the inquiry is all publicly available. *Id.* at 271. Econometric analysis, such as

---

[3] *Dura* recognized that, in a defrauded-buyer case, injury cannot be proven by evidence of price inflation alone *Dura Pharms., Inc. v. Broudo*, 544 U.S. 336, 346 (2005). Although *Oscar* did not address this issue, it could be argued that evidence of price inflation alone is similarly insufficient to support a presumption of reliance. If, as the Court observed in *Basic*, reliance provides the causal link between the misrepresentation and the plaintiff's injury, then only evidence of a decrease when the "truth" is revealed can support a presumption of that link consistent with the efficient-market hypothesis.

an event study, can isolate the factors affecting the stock price. *Id.* Frequently, defendants point to an event study as evidence to sever the link between the alleged misrepresentation and the stock price. *Id.* at 265 n.22. And in response, plaintiffs then point to their own event study to refute the defendants' contentions. *Id.*

At that point, the trial court will have to decide which expert to believe, and the placement of the burden of proof makes little or no difference. If the defendant has an initial burden to rebut, then the court must decide whether to credit the defendant's expert over the plaintiff's expert. And if the plaintiff has a burden to prove market impact, then the court must decide whether to credit the plaintiff's expert over the defendant's expert. But in either case, the analysis is the same, and the placement of the burden is immaterial.

Moreover, where, as here, the parties dispute whether the negative news is even related to the prior alleged misrepresentations, the burden of proof is even less important. The relatedness requirement is important because it is relatedness that allows the court to infer from the decrease in stock price that the alleged misrepresentation affected the stock price. *Greenberg v. Crossroads Sys., Inc.*, 364 F.3d 657, 663 (5th Cir. 2004). Where the parties dispute relatedness, the court simply needs to compare the negative news to the prior alleged misrepresentation and decide whether the negative news let the market know that the prior alleged misrepresentations were false. The burden of proof makes no difference in that determination.

The Fifth Circuit also observed that virtually no discovery is needed to produce evidence of actual market impact. The efficient-market hypothesis focuses on what information was made publicly available and how the market reacted to that information. Internal company documents are irrelevant to this determination unless they were made public. *E.g.*, *Alaska Elec. Pension Fund v. Flowserve Corp.*, 572 F.3d 221, 230 (5th Cir. 2009) ("[U]ndisclosed information cannot drive down the market price of a stock."). Therefore, because all of the relevant information must be public, discovery is not necessary.

5. Summary

Oscar is the unremarkable logical result of the Fifth Circuit's application of the efficient-capital-markets hypothesis to a case involving allegedly defrauded buyers. In *Nathenson*, the Fifth Circuit observed that a decrease in stock price when the "truth" is revealed also could prove market impact. In *Greenberg*, the court recognized that the presumption of reliance can be reasonable only if corrective information that causes the subsequent price decline actually relates back to the prior misrepresentation. In *Unger*, the court recognized that the presumption of reliance cannot be applied unless the plaintiffs produce admissible evidence to support it. And in *Oscar*, the court correctly recognized that proof of market impact is necessary at class-certification to invoke the presumption of reliance. Since entitlement to the presumption is an essential prerequisite under Rule 23, the Fifth Circuit properly requires plaintiffs to prove entitle-

ment by a preponderance of the evidence at the class-certification stage.

C. Petitioner's attacks on *Oscar* miss the mark.

When *Oscar* is considered in light of its jurisprudential underpinnings, Petitioner's arguments that *Oscar* was incorrectly decided cannot withstand scrutiny. As discussed more fully below, *Oscar* does not conflict with *Basic* or *Eisen*. Nor did the Fifth Circuit engage in improper judicial legislation. *Oscar* is consistent with both the Court's jurisprudence and Congress's expressed intent regarding securities-fraud suits.

1. Petitioner and the Petitioner's *amici* misunderstand the term "loss causation" as used in *Oscar*.

As the Seventh Circuit has noted: "'Loss causation' is an exotic name – perhaps an unhappy one ... for the standard rule of tort law that the plaintiff must allege and prove that, but-for the defendant's wrongdoing, the plaintiff would not have incurred the harm of which he complains." *Bastian v. Petren Res. Corp.*, 892 F.2d 680, 685 (7th Cir. 1990) (Posner, J.). In *Oscar*, the Fifth Circuit used "loss causation" as a short-hand phrase in a specific context — to describe its requirement that a class proponent seeking to invoke the presumption of reliance in a defrauded-buyer case must prove that the misstatement affected the market price. In *Oscar*, the plaintiffs had failed to offer any proof that any portion of the stock price decrease following the 4Q01 release would not have occurred but-for the

prior positive regarding line count. 487 F.3d at 271. In using this phrase, the Fifth Circuit was not using "loss causation" in the same sense as the Court used the term in *Dura*.

In *Dura*, "loss causation" clearly refers to the plaintiffs' obligation to prove that the misrepresentation ultimately caused an actual economic loss, not just a "paper loss" when the truth became known to the market. The specific issue there was whether an allegation that the price of the security was inflated on the date of purchase was sufficient to allege that the defendant's fraud caused an economic loss to the plaintiffs. 544 U.S. at 338. The Court noted that the PSLRA "expressly imposes on plaintiffs 'the burden of proving' that the defendant's misrepresentations 'caused the loss for which the plaintiff seeks to recover.'" *Id.* at 345-46 (quoting 15 U.S.C. § 78u-4(b)(4)). The Court also observed that courts refer to this requirement as "loss causation." *Id.* at 338.

The Court concluded in *Dura* that "[n]ormally, in cases such as this one (*i.e.*, fraud-on-the-market cases), an inflated purchase price will not itself constitute or proximately cause the relevant economic loss." *Id.* at 342. Although an inflated purchase price may be a necessary condition of economic loss, it is not sufficient by itself. *Id.* at 343. Therefore, the Court required that plaintiffs plead and prove that the defendant's fraudulent conduct proximately caused "the plaintiff's economic loss." *Id.* at 346. And this showing is what the Court refers to as "loss causation" in *Dura*.

Under the same reasoning, the deflation in price

that, under the efficient-market hypothesis, will occur if the misstatement has any continuing effect when the market learns the truth will not itself constitute or proximately cause the relevant economic loss. Such a market loss may be necessary for an actual economic loss, but it is not sufficient by itself. At least for a defrauded buyer who continues to hold the security, the actual economic loss will be sustained some time later than the paper loss from the market decline.

Thus, the showing of actual economic loss described as "loss causation" in *Dura* is separate and distinct from the showing of a market loss described as "loss causation" in *Oscar*. In fact, the court in *Oscar* specifically noted "Our approach is unaffected by the Supreme Court's recent and very narrow decision in *Dura Pharms.*, 125 S. Ct. at 1627." *Id.* at 265.

Despite this distinction, Petitioner has seized on the Fifth Circuit's use of the term "loss causation" to set up a straw man. Many of Petitioner's arguments are premised on the idea that the Fifth Circuit requires proof of loss causation as that term is used in *Dura*. For example:

- "In *Oscar*, the Fifth Circuit held that securities fraud plaintiffs must prove loss causation, *i.e.*, that a defendant's alleged misrepresentations are the proximate cause of their economic loss, at class certification, to invoke the fraud-on-the-market presumption." (Petitioner's Br. at 23.)
- "Loss causation, by contrast, concerns

> whether a subsequent corrective disclosure caused plaintiffs' loss." (*Id.* at 45.)

In addition, Petitioner's repeated argument that *Oscar* imposes an additional burden at the class-certification stage is based on the assertion that "loss causation" in *Oscar* means the same thing as "loss causation" in *Dura*. (*See* Petitioner's Br. at 5, 24, 27, 32, 38, 47.) But, as discussed above, *Oscar* ties its requirement for proof of "market-loss causation" to the issue of whether any presumption of reliance can continue to supply the necessary causal link between the earlier misstatement and any actual economic loss sustained after the truth enters the market. Therefore, the Court should disregard Petitioner's arguments based on this misunderstanding of the sense in which the Fifth Circuit is using the term "loss causation" in *Oscar*.[4]

2. *Oscar* does not conflict with *Basic*.

As detailed in Part B above, *Oscar* is the logical result of the Court's decision in *Basic*, and the application of its principles in subsequent Fifth Circuit cases. Most of Petitioner's arguments about ways that *Oscar* allegedly conflicts with *Basic*

---

[4] Petitioner and some *amici* appear to suggest that the Fifth Circuit is unaware of the distinction between reliance (or transaction causation) and loss causation. Any such suggestion is ludicrous. Judge Patrick Higginbotham authored the *Oscar* opinion. He has written extensively on securities issues in prior opinions, and in scholarly publications. In its discussion of the efficient-market hypothesis, the Court in *Basic* quoted Judge Higginbotham's 1980 opinion in *In re LTV Securities Litigation*, 88 F.R D. 134 (N.D. Tex. 1980). 485 U.S. at 244.

collapse when they are analyzed with the proper understanding of "loss causation" as *Oscar* uses that term. *Oscar* simply ensures that the actual market events through the time the truth enters the market are consistent with the efficient-market hypothesis that underlies the presumption of reliance. If they are not, then there is no basis for continuing to presume that an allegedly defrauded buyer is relying on a tainted market. Petitioner's arguments that *Oscar* is inconsistent with *Basic* fail for at least three reasons.

First, Petitioner appears to misunderstand the nature of the presumption in *Basic*. Petitioner claims that the Fifth Circuit's rule subverts the fraud-on-the-market theory by "requiring the plaintiffs to prove, as a pre-condition to application of the presumption, the very facts that are to be presumed under *Basic*." (Petitioner's Br. at 33 (quoting the dissent in *Oscar*).) The presumption in *Basic* is not that the misrepresentation affected the market price. Rather, *if* the misrepresentation affected the efficient market's price, then it is presumed that plaintiffs relied on the misrepresentation in participating in the market. *Stoneridge Inv. Partners, LLC v. Scientific-Atlanta, Inc.*, 552 U.S. 148, 159 (2008); *Basic*, 485 U.S. at 247-48. Conversely, if the misrepresentation did not affect the efficient market's price, then there is no basis to use the presumption of reliance to make a causal connection between the misrepresentation and the plaintiff's injury. Therefore, *Oscar* simply requires that plaintiffs show that the presumption is warranted by showing that the alleged misrepresentation affected the market price of the securities at issue.

Second, Petitioner's argument that there is no justification for requiring proof of market impact ignores an essential element of the fraud-on-the-market theory. Petitioner claims that the presumption of reliance can be invoked simply by showing general market efficiency. (Petitioner's Br. at 40-41.) But the efficient-market hypothesis underlying the presumption of reliance predicts that the alleged misrepresentation will cause a market decline when the truth enters the market if it continues to affect the defrauded buyer's stock. The fact that a decline attributable to the misstatement does not occur eliminates the justification for applying the presumption. *Stoneridge*, 552 U.S. at 159; *Basic*, 485 U.S. at 248.

As the court observed in *Oscar*, the fraud-on-the-market theory rests on the "semi-strong efficient-market hypothesis." 487 F.3d at 269. The semi-strong efficient-market hypothesis posits that "the collective action of a sufficient number of market participants buying or selling stock causes a very rapid, if not virtually instantaneous, adjustment in price." Daniel R. Fischel, *Use of Modern Finance Theory in Securities Fraud Cases Involving Actively Traded Securities*, 38 Bus. Law. 1, 10 (1982-83).

If the release of the alleged "truth" does not cause a stock price decline, there are three possible explanations. First, the prior alleged misrepresentation may not have been material. *Oscar*, 487 F.3d at 269. Second, it may be that the market is not efficient as to that information, even though the other relevant indicia support a finding that the market is generally efficient. *Id.* Third, it may be that the market is "strong-form efficient" as to that

information. *Id.* When a market is strong-form efficient, the price reflects not only public information but also insider information. *Id.*

Each of these three scenarios is inconsistent with the justification for applying a presumption of reliance. If the information was immaterial, then no one could have relied on it. *Basic*, 485 U.S. at 248 n.27 (noting that one requirement of the fraud-on-the-market theory is the existence of a public, material misrepresentation). If the market is not efficient as to the information at issue, then there is no basis to presume that buyers and sellers were relying on that information when participating in the market. Finally, if the market is strong-form efficient, then there is no basis to presume that market participants were relying on *public* information. Therefore, by requiring plaintiffs to prove a market impact, *Oscar* simply ensures that any presumption of reliance applied is consistent with the efficient-capital-markets hypothesis.

Third, Petitioner claims that *Basic* holds that the presumption can be rebutted only at the time of trial. (Petitioner's Br. at 24.) In support of this assertion, Petitioner relies on footnote 29 in *Basic*. (*Id.*) But footnote 29 suggests only that the time of trial is one possible time at which the presumption can be rebutted. *Basic*, 485 U.S. at 249 n.29. The Court noted that the district court retains the ability to amend the certification order as may be appropriate. *Id.* (citing Fed. R. Civ. P. 23(c)(1) and (c)(4)). But nothing in Rule 23 requires that such amendments can only be made at the time of trial. Fed. R. Civ. P. 23(c)(1)(C). Rather, they can be made

at any time that a party presents evidence to support them. *Id.* ("An order that grants or denies class certification may be altered or amended before final judgment."). Therefore, *Oscar* is not inconsistent with *Basic* in holding that the presumption can be rebutted at the class-certification stage if the evidence does not support the application of the presumption of reliance.

3. *Oscar* does not conflict with *Eisen*.

Petitioner also argues that *Oscar* conflicts with the Court's decision in *Eisen v. Carlisle & Jacquelin*, in which the Court held that Rule 23 does not permit a preliminary inquiry into the merits of the plaintiffs' claims. 417 U.S. 156, 177 (1974). Petitioner concedes, as it must, that *Eisen* has been interpreted to mean that merits inquiry is not foreclosed if it is necessary to determine whether the requirements of Rule 23 have been met. (Petitioner's Br. at 47 (citing *In re Initial Pub. Sec. Offerings Litig.*, 471 F.3d 24, 41 (2d Cir. 2006)).) Therefore, Petitioner's argument that *Oscar* conflicts with *Eisen* is premised on the assumption that there is no relationship between the causal connection the presumption of reliance is being used to make and *Oscar*'s requirement of showing a market impact.

That assumption is faulty because *Oscar*'s requirement of a market loss is part of the fraud-on-the-market analysis, which, in turn, is part of the Rule 23 analysis. There is no dispute that entitlement to the presumption of reliance based on the efficient-market hypothesis is a critical part of the Rule 23 analysis. The presumption of reliance allows

plaintiffs to meet the predominance requirement for class certification. *See* Fed. R. Civ. P. 23(b)(3). In the absence of the presumption of reliance, there would have be an individual inquiry to establish each proposed class member's reliance and class certification would be improper. *Basic*, 485 U.S. at 242.

As discussed in detail above, *Oscar*'s rule is inextricably related to the justification for the presumption that the allegedly defrauded buyers relied on the price set by an efficient, but tainted market. If there is no market movement attributable to the misstatement, there is no basis for applying the presumption to a set of events that are inconsistent with it. And without the presumption of reliance, the requirements of Rule 23 cannot be met. Therefore, *Oscar* does not conflict with *Eisen*. *See also Unger*, 401 F.3d at 325.

Petitioner also argues that because determination of whether the alleged misstatement caused all or part of a later market loss is a common issue, it should not be considered at the class-certification stage. But as shown above, the requirements of Rule 23 cannot be satisfied without the presumption of reliance. Therefore, even if market loss is a common issue, it still must be considered and decided at the class-certification stage in order to determine whether the presumption of reliance can be used to satisfy Rule 23's predominance requirement. Otherwise class certification is improper.

Petitioner also claims that plaintiffs cannot make the showing required by *Oscar* without merits discovery. (Petitioner's Br. at 52-56.) This is factually incorrect. As *Oscar* explicitly demonstrated, proof

that the alleged misrepresentation affected the market price will require only publicly available information. *Oscar*, 487 F.3d at 267. Petitioner claims that merits discovery would have permitted it to "look behind" the public disclosures. (Petitioner's Br. at 53.) But the market-loss inquiry is concerned only with the efficient market's reaction to what was known to the efficient market. *Oscar*, 487 F.3d at 267. Under the efficient-market hypothesis, internal company information, or other information not known to the efficient market, could not have impacted how the market reacted to the revelation of the truth. *E.g.*, *Alaska Elec. Pension Fund v. Flowserve Corp.*, 572 F.3d 221, 230 (5th Cir. 2009) ("[U]ndisclosed information cannot drive down the market price of a stock."). There is no basis for Petitioner's claim that this type of merits discovery would be relevant to the but-for inquiry on "market-loss causation."

Petitioner stretches *Oscar* beyond its breaking point to argue that the Fifth Circuit requires proof of scienter at the class-certification stage. (Petitioner's Br. at 53-54.) Nothing in *Oscar* requires proof that the defendants were aware of the falsity of the alleged prior misrepresentations. Again, the focus is on the market's reaction to the negative news, and whether but-for the alleged prior positive misrepresentations, that negative reaction would have occurred. Whether the prior statements were made with scienter has nothing to do with *Oscar*'s requirement to show that the alleged misrepresentation caused a market loss.

In sum, *Oscar*'s "market-impact" causation

requirement is directly tied to the justifications underlying the presumption that defrauded buyers were relying upon the price set by an efficient, but tainted market. If there is no market movement attributable to the alleged misstatement, there is no justification for presuming that but-for their misguided reliance on the integrity of the efficient market, the defrauded buyers would not have sustained an actual economic loss. Since absence of market movement when the truth enters the efficient market is directly contrary to the efficient-market hypothesis, *Oscar*'s requirement is consistent with *Basic*, *Dura*, and Rule 23.

4. *Oscar* is not impermissible judicial legislation.

Petitioner concludes its brief by arguing that the Fifth Circuit invaded Congress's prerogative to "calibrate" class-certification Rules. (Petitioner's Br. at 57-67.) But this argument is infected by the same misunderstandings and faulty assumptions that doom Petitioner's other arguments. Petitioner's arguments are premised on its assertion that the rule in *Oscar* is not consistent with Rule 23. As shown above, *Oscar* is simply an application of the principles underlying the presumption of reliance as they apply to claims by allegedly defrauded buyers. Because *Oscar* is consistent with Rule 23, Petitioner's claims of improper "amendment" or "recalibration" are unfounded.

Petitioner's specific arguments fail for additional reasons, as well. Petitioner first claims that the Fifth Circuit improperly injected policy considerations into

its analysis. (Petitioner's Br. at 57.) But, as discussed more fully above, the policy considerations that the Fifth Circuit identified are those reflected in Congressional actions regarding Rule 23 and the PSLRA. (*See* page 14, above.) The Fifth Circuit was simply acknowledging and furthering the policies identified by Congress.

Petitioner next claims that *Oscar* improperly recalibrated the requirements for a securities-fraud case to be certified as a class action because that may only be done by Congress. (Petitioner's Br. at 60.) This argument ignores the fact that it was the courts, not Congress, that approved the presumption of reliance based on the fraud-on-the-market theory. As discussed above, the judicially created presumption of reliance allows cases to proceed as class actions that otherwise would not satisfy the requirements of Rule 23. (*See* pages 3-4, above.) And because the rule in *Oscar* is consistent with this Court's class-action jurisprudence, there is nothing improper about the development of class-action law in the Fifth Circuit.

Petitioner also attempts to invoke plaintiffs' right to a jury trial under the Seventh Amendment. (Petitioner's Br. at 62.) But this right is not implicated because, as shown above, the rule in *Oscar* is simply part of the Rule 23 analysis. And there is no right to a jury trial on whether the requirements of Rule 23 have been satisfied. Fed. R. Civ. P. 23(b)(3) (providing that class certification is appropriate if "the court finds" that the requirements are met). And the standard of proof is immaterial to this analysis because all of the

requirements of Rule 23 must be established by a preponderance of the evidence. *See In re Hydrogen Peroxide Antitrust Litig.*, 552 F.3d 305, 320 (3d Cir. 2008); *Teamsters Local 445 Freight Div. Pension Fund v. Bombardier Inc.*, 546 F.3d 196, 202 (2d Cir. 2008); *Oscar*, 487 F.3d at 267-269.

Petitioner's final argument is simply a complaint that the standard in *Oscar* is difficult to satisfy. (Petitioner's Br. at 66-67.) As shown above, *Oscar* simply requires plaintiffs to show that the presumption should be applied. The fact that this showing may be difficult in some cases is no reason for the Court to further lower a bar already lowered by allowing use of the presumption of reliance to satisfy the predominance requirement in Rule 23. Without any valid policy justification, Petitioner, in effect, seeks the recognition of a completely new presumption — a conclusive presumption of market impact through the class certification stage. This would facilitate precisely the type of litigation abuse that was an unintended result of *Basic* and that the PSLRA sought to eradicate.

D. The Seventh Circuit's simplistic approach in *Schleicher* fails to rigorously analyze whether the presumption of reliance makes the necessary causal link between the misstatements at issue and the economic loss claimed.

Petitioner repeatedly points to the Seventh Circuit's recent opinion in *Schleicher v. Wendt*, 618 F.3d 679 (7th Cir. 2010), as a contrast to *Oscar* on the proper approach to certification of a class of allegedly

defrauded buyers. (Petitioner's Br. at 29, 31, 41, 44, 61, 67.) *Schleicher* expressly disavows the Fifth Circuit's approach in *Oscar*, and holds that a class proponent need show only general market efficiency at the time of purchase to invoke the presumption of reliance. *See* 618 F.3d at 684 ("Conseco was a large, well-followed firm, whose stock traded actively in a liquid market. It comfortably meets *Basic*'s requirements.") Under the Seventh Circuit's approach, any consideration of whether the alleged misrepresentation actually produced movement in the generally efficient market is a merits inquiry *prohibited* at the class certification stage. *See* 618 F.3d at 686-87 ("The chance, even the certainty, that a class will lose on the merits does not prevent its certification.").[5]

As discussed above, absent actual impact on the stock price, the presumption of reliance cannot supply the requisite but-for causal connection between the alleged misrepresentation and the actual economic loss. *Schleicher* acknowledges that "[w]hen an unduly optimistic false statement causes a stock's price to rise, the price will fall again when the truth comes to light." 618 F.3d at 683. But the opinion

---

[5] *Schleicher* also rejects the approaches of the First and Second Circuits that have required a showing of market impact at the class certification stage in analyzing the materiality element of a 10b-5 claim. 618 F.3d at 687. Curiously, *Schleicher* references the Third Circuit's decision in *In re Burlington Coat Factory Securities Litigation*, 114 F.3d 1410, 1419 n.8 (3d Cir. 1997) (Alito, J.) as support for its position on materiality. In *Oran v. Stafford*, 226 F.3d 275, 282 (3d Cir. 2000), the Third Circuit found that the *Burlington Coat* requirement for a showing of market movement applied in the class-action context.

ignores the converse. If the price does not fall when the truth comes to light, then the effect, if any, that the unduly optimistic false statement had on the market price has been dissipated. The buyer is continuing to rely on the market to set the price, but the market is no longer tainted by the misrepresentation. Thus, the presumption of reliance no longer makes the requisite causal link for the proposed class members. The class proponent then cannot show entitlement to the presumption, or the presumption has been rebutted. By ignoring this essential element, *Schleicher* conflicts with *Basic* and *Stoneridge*. *Stoneridge Inv. Partners, LLC v. Scientific-Atlanta, Inc.*, 552 U.S. 148, 159 (2008); *Basic*, 485 U.S. at 248.

Schleicher also makes the bald statement that "person-specific issues" that determine "how much a given investor lost (or gained) as a result of the fraud" are issues that "can be resolved mechanically" by a computer. 618 F.3d at 681. This is clearly incorrect. As discussed above, *Dura* does not define a precise measure of damages for a defrauded buyer's 10b-5 claim, but the decision does make clear that the "relevant economic loss" is not the amount of inflation at the time of purchase or the "paper loss" in response the revelation of the truth. *Dura*, 544 U.S. at 343-44. The original purchase prices and quantities for proposed class members presumably are susceptible of mechanical calculation by a computer. But given the myriad of factors affecting price, and the myriad of factors involved in the individual decisions to sell, a mechanical calculation of the continuing effect, if any, of the fraudulent statement on the stock price for shares held by proposed class

member after the truth becomes known is simply not possible.

Many of *Schleicher*'s criticisms are the same as those raised by Petitioner, and they are addressed above. But three additional criticisms warrant specific mention here. *Schleicher* suggests that *Oscar* would make it too difficult to certify class actions in cases where it is "impossible" to disentangle the effects of fraudulent statements from the effects of other statements. *Schleicher*, 618 F.3d at 686. But this argument ignores the very nature of the efficient-capital-markets hypothesis. If the effects of the statements cannot be disentangled, then either plaintiffs have not shown entitlement to the presumption or defendants have rebutted it. In either case, the presumption that the class of buyers relied on the market does not make the required but-for connection between the alleged misrepresentation and the economic loss claimed. Under those circumstances, individual issues of reliance predominate and the class cannot be certified.

Schleicher also suggests that *Oscar* does not adequately account for the "truth-on-the-market" theory, in which the truth comes out and affects the stock price before any formal announcement is made. *Id.* at 687. That is simply a misreading of *Oscar*. There the plaintiffs affirmatively asserted that the market learned the truth through the company's 4Q01 release. The opinion specifically recognizes and accounts for the possibility that the truth may become known in other ways. *Oscar,* 487 F.3d at 269-70.

Finally, *Schleicher* claims that a plaintiff's failure

to satisfy the requirements of *Oscar* results in the plaintiff losing on the merits. 618 F.3d at 687. But *Oscar* makes clear that the only impact of failing to obtain the presumption of reliance at the class-certification stage is that the class will not be certified. 487 F.3d at 271. The lead plaintiffs (and other plaintiffs) are still free to pursue their individual claims. Institutional investors like Petitioner still have a substantial economic incentive to do so.

In sum, *Schleicher* oversimplifies and mischaracterizes the issues in an attempt to dispose of *Oscar*. *Schleicher*'s simplistic approach would require certification of a class where, under the efficient-capital-markets hypothesis, the market effects, if any, of the alleged misstatement have been dissipated. *Basic* did not adopt the efficient-market hypothesis. Instead, the Court found it had sufficient empirical support to be used as the basis for a presumption that investors relied upon an alleged misstatement because an efficient market would have factored it into the security's price. But where the actual events are inconsistent with the events the efficient-market hypothesis predicts, there is no basis for using the presumption to make the requisite but-for causal connection. *Basic* stated that "any showing" could make the presumption inappropriate. *Oscar* and the other Fifth Circuit cases are consistent with *Basic*. It is *Schleicher* that is inconsistent.

CONCLUSION

The Fifth Circuit's rule, as outlined in *Oscar* and in this case, is the logical result of the Court's decision in *Basic*. There, the Court approved the use of a rebuttable presumption of reliance based on the efficient-capital-markets hypothesis. This presumption can allow class certification of securities-fraud suits even though proof of reliance is usually an individualized inquiry. But if the alleged misrepresentation did not actually affect the market price, then there is no reasonable basis to presume reliance. Therefore, the Court recognized that the presumption is rebutted by "any showing" that severs the causal link.

Petitioner seeks to further lower the bar to class certification. First, Petitioner seeks to apply the rebuttable presumption of reliance based simply on evidence of market efficiency. This approach ignores the importance of actual market impact. Second, Petitioner asks this Court to hold that the rebuttable presumption is *not* rebuttable at the class-certification stage. Even if the preponderance of the admissible evidence shows that the alleged misrepresentations had no impact on the market price, Petitioner's proposed rule would require the class to be certified. The Court should affirm the decision below.

INTEREST OF AMICI

Amici are academic financial economists whose scholarship and teaching focuses on public securities markets.[1] Sanjai Bhagat is the Provost Professor of Finance at the University of Colorado. Daniel Bernhardt is the IBE Distinguished Professor of Finance and Economics at the University of Illinois. Matthew T. Billett is Professor of Finance at the University of Iowa. Michael Bradley is the F.M. Kirby Professor of Investment Banking, Emeritus, at Duke University. Francis Longstaff is the Allstate Professor of Insurance and Finance at the University of California at Los Angeles. Robert Parrino is the Lamar Savings Centennial Professor of Finance at the University of Texas. Marti Subrahmanyam is the Charles E. Merrill Professor of Economics and Finance at New York University.

STATEMENT

In *Basic v. Levinson*, 485 U.S. 224 (1988), this Court endorsed a rebuttable presumption of reliance on the integrity of securities prices determined in well developed markets. *Basic* held that, under the "fraud-on-the-market" theory, courts may presume that securities prices in an open and developed market reflect all material public information and that investors rely on the integrity of the market price. Together, these

1. Pursuant to Rule 37.6, *amici* affirm that no counsel for a party authored this brief in whole or in part, and that no person other than *amici* and their counsel made a monetary contribution to the preparation or submission of this brief. The parties have filed letters giving blanket consent to the filing of amicus briefs in this case.

two presumptions allow plaintiff investors to establish that they have relied, indirectly, on allegedly false or misleading public statements of corporate managers. In establishing these presumptions, *Basic* relied in part on an important underlying economic theory—the "efficient markets hypothesis."

This case concerns the relevance of the efficient markets hypothesis to the certification of securities fraud class actions under Fed. R. Civ. P. 23. A plaintiff must prove reliance on a false statement as an element of his securities fraud claim. If each plaintiff had to submit individual proof of reliance—e.g., that he bought a security based on falsely positive statements by management about the company's prospects—then individual issues would frequently predominate and courts would deny class certification. The fraud-on-the-market doctrine, however, allows a presumption of reliance if plaintiffs purchased their securities in a well-developed, impersonal market. The reliance issue thus becomes a common one of showing that the market for the relevant security is sufficiently efficient to warrant the *Basic* presumption.

The Fifth Circuit has departed from this established approach in a series of decisions, including the present one, that requires plaintiffs to prove "loss causation" at class certification. It apparently did so in part based on certain economic literature criticizing aspects of the efficient markets hypothesis. The principal purpose of this brief is to address that criticism. *Amici* wish to make three central points: First, the version of the efficient markets hypothesis that this Court relied upon in *Basic*—what financial economists today refer to more precisely as the "semi-strong" version of the efficient market hypothesis

("SSEMH")—remains widely accepted as a fundamental principle of modern financial economic theory. That is true even though—like *all* useful social science theories applicable to human behavior—it is not "perfect" and does not explain *every* conceivable price movement for *every* market-traded economic asset.

The second point concerns the showing by which litigants may demonstrate or disprove the efficiency of the market for the security at issue in a class action. Lower courts have generally applied a multi-factor test developed in two district court decisions, *Cammer v. Bloom*, 711 F. Supp. 1263 (D.N.J. 1989), and *Krogman v. Sterritt*, 202 F.R.D. 467 (N.D. Tex. 2001). *Amici* believe that these factors are both helpful and manageable for trial courts. The most *direct* test of market efficiency from an economic perspective is an "event study," because it asks whether there is a cause and effect relationship between new information and contemporaneous changes in market price—the hallmark of an efficient market. The other *Cammer/Krogman* factors (e.g. bid-ask spreads, trading volume, amount of analyst coverage, etc.) are indirect indicators of efficiency, and their role should generally be limited to confirming an evaluation of general market efficiency in cases where an event study's conclusions are questionable or unclear.

Third, *Amici* reject the Fifth Circuit's suggestion that concerns about the limitations of the SSEMH require that plaintiffs show "something more" than the general efficiency of the market for a particular security in order to merit a presumption at class certification that investors relied on the integrity of the market price. Rule 23 requires only that the common issues "predominate"

over individual issues for class certification, and economic criticisms of the SSEMH at the margins do not mean that the fraud-on-the-market's general presumption of reliance is misplaced—especially at the early stages of litigation. If lower courts properly apply the *Cammer/Krogman* analysis—and in particular, if plaintiffs provide event study analysis indicating that the security's price moves in response to company-specific news—then the loss causation showing required by the Fifth Circuit would only rarely, if ever, add anything meaningful or reliable for purposes of determining whether investors should be presumed to have relied on the integrity of the market price.

ARGUMENT

I. The Efficient Markets Hypothesis Remains a Sound and Well-Accepted Basis for the Fraud-on-the-Market Presumption of Reliance in Securities Class Actions.

Basic endorsed the presumption that "in an open and developed securities market, the price of a company's stock is determined by the available material information regarding the company and its business." 485 U.S. at 242 (quoting *Peil v. Speiser*, 806 F.2d 1154, 1160-61 (3rd Cir. 1986)). In so doing, this Court cited one of the most important social science hypotheses of the last century.

A. The meaning of an "efficient market."

Basic drew upon a longstanding recognition that stock markets respond to and reflect material information—

including false information.[2] Similarly, in a famous 1970 article, Eugene Fama distinguished among three different models of market efficiency:

> "Weak-form" efficiency requires that historical prices are not predictive of future prices. Excess profits cannot be earned using strategies based on historical prices.
>
> "Semi-strong form" efficiency implies that all public information is reflected in a stock's current market price, and that security prices adjust to new publicly available information so that it is impossible to earn excess returns by trading on that information.
>
> "Strong-form" efficiency implies that all information in the market, whether public or private, is accounted for in the market price. Investors cannot consistently earn excess profits over a long period of time—even if they have inside information.[3]

---

2. This recognition dates back at least two centuries. *See Rex v. De Berenger*, 3 M. & S. 67, 105 Eng. Rep. 536 (K.B. 1814); *see also* Barbara Black, *Fraud on the Market: A Criticism of Dispensing with Reliance Requirements in Certain Open Market Transactions*, 62 N. C. L. Rev. 435, 456 (1984).

3. Eugene Fama, *Efficient Capital Markets: A Review of Theory and Empirical Work*, 25 J. Fin. 383 (1970). *See also Schleicher v. Wendt*, 618 F.3d 679, 685 (7th Cir. 2010) (Easterbrook, J.) (explaining the difference between these three forms of market efficiency).

All three constructs are sometimes described as "variations" of "the" efficient markets hypothesis; however, in the context of describing how financial markets actually operate, references to the "efficient market hypothesis" typically refer to the "semi-strong" version (SSEMH). For example, Professor Fama states that "I take the market efficiency hypothesis to be the simple statement that security prices fully reflect all available information .... A weaker and economically more sensible version of the efficiency hypothesis says that prices reflect information to the point where the marginal benefits of acting on information (the profits to be made) do not exceed the marginal cost."[4]

The critical aspect of the SSEMH for class certification purposes is an efficient market's ability to incorporate material public information in the security price, so that class members may be presumed to have relied on the integrity of the market price without regard to whether they individually relied on a particular statement. Most discussions of market efficiency, however, focus on whether investors can "earn above-average returns without accepting above-average risks."[5] In the fraud-on-the-market context, the unavailability of above-average returns plays a crucial confirmatory role: If investors who

---

4. Eugene Fama, *Efficient Capital Markets: II*, 46 J. Fin.1575, 1575 (1991). Standard finance textbooks provide similar definitions. *See, e.g.*, Richard Brealey, Stewart Myers & Franklin Allen, *Principles of Corporate Finance* 317-18 (10th ed. 2011); Stephen A. Ross, Randolph W. Westerfield & Jeffrey Jaffe, *Corporate Finance* 430-31 (9th ed. 2010).

5. Burton G. Malkiel, *The Efficient Market Hypothesis and its Critics*, 17 J. Econ. Perspectives 59 (2003).

closely analyze the market cannot consistently earn above-average returns based on material public information, this is a signal that the market price has already incorporated such information.

Basic's presumption of reliance drew upon the SSEMH—*not* the "strong form" of market efficiency. The presumption's point, after all, is that the market can be "fooled" by public, material misrepresentations, such that the false information is reflected in the market price for the company's securities. In contrast, under the broadly rejected theory of "strong form" efficiency, no deception would be possible because all privately-available truths would also be reflected in market prices.[6]

The SSEMH holds that market prices respond promptly to new material information.[7] Modern financial markets are "amazingly successful devices for reflecting new information rapidly. The response time may not be immediate; sometimes there is underreaction for a short period. But by and large, prices reasonably reflect whatever public knowledge there is about each [publicly-

---

6. *See Schleicher*, 618 F.3d at 685 ("Many economists think that the strong form of the hypothesis has been refuted, but the weak and semi-strong forms are widely accepted. And the fraud-on-the-market doctrine rests on the semi-strong form."); *see also* Daniel Fischel, *Efficient Capital Markets, the Crash, and the Fraud on the Market Theory*, 74 Cornell L. Rev. 907, 910-11 (1989).

7. *See, e.g.*, Donald Langevoort, *Theories, Assumptions and Securities Regulation: Market Efficiency Revisited*, 140 U. Pa. L. Rev. 851, 851 (1992) (describing the theory's "central insight . . . that a variety of forces impound available information into stock prices fast enough that arbitrage opportunities cannot be exploited systematically").

traded] company."[8] A variety of mechanisms serve to ensure modern financial markets' efficiency in terms of responding to new information and distilling the market's overall response into a price.[9]

The SSEMH is a theory of *informational* efficiency, and as such it must be distinguished from theories of *fundamental* efficiency. "Informational efficiency" posits that stock prices will reflect publicly available information quickly and in a generally unbiased manner. In contrast, "fundamental efficiency" posits that stock prices will accurately reflect the present value of a company's expected after-tax cash flows.[10] Fundamental efficiency is more of an intellectual construct than a "theory," inasmuch as virtually no financial economists believe that securities markets are "fundamentally efficient."[11]

Some criticisms of the fraud-on-the-market doctrine conflate these two forms of efficiency. Justice White's dissent in *Basic*, for example, criticized the majority

11. *See, e.g.*, Andrei Shleifer, *Inefficient Markets: An Introduction to Behavioral Finance* 5, 24 (2000) (noting the "overwhelming" empirical evidence in favor of informational efficiency, while observing that "[fundamental] efficiency only emerges as an extreme special case, unlikely to hold under plausible circumstances").

for "implicitly suggesting that stocks have some 'true value.'" 485 U.S. at 255 (White, J., dissenting in part).[12] But *Basic*'s presumption of reliance relied only on informational efficiency—that is, the notion that "in an open and developed securities market, the price of a company's stock is determined by *the available material information* regarding the company and its business." 485 U.S. at 247 (majority opinion) (emphasis added).[13] The inability to discern a single, "true" value for Basic's shares was immaterial, from an economic perspective, to the claim in the case: that a lie by corporate managers concerning a possible merger depressed Basic's stock price below what it would otherwise have been. *See id.* at 228, 245.[14]

---

12. *See also* Ian Ayres, *Back to Basics: Regulating How Corporations Speak to the Market*, 77 Va. L. Rev. 945, 983 (1991) (observing that Justice White's critique emphasized fundamental efficiency, while the majority relied only on informational efficiency).

13. *See also* 485 U.S. at 247 n.24 ("For purposes of accepting the presumption of reliance in this case, we need only believe that market professionals generally consider most publicly announced material statements about companies, thereby affecting stock market prices."). To the extent the Court equated market price with "true value," it did so only in the limited sense that a market price, reflecting public information, is the best available estimate of value. *Id.* at 244.

14. *See also Eckstein v. Balcor Film Investors*, 8 F.3d 1121, 1129-30 (7th Cir. 1993) ("We call a market 'efficient' because the price reflects a consensus about the value of the security being traded—not necessarily because the price captures the true value of the firm's assets but because the price is the best available device to assess the significance of additional bits of information."); Ayres, 77 Va. L. Rev. at 983 ("[E]ven in a market that is not fundamentally efficient . . . an informationally efficient market will

The vast majority of finance academics believe that U.S. markets for public securities are informationally efficient.[15] Of course, professional investment advisors (who have an interest in persuading others to believe that they can consistently outperform the market) and members of the financial press periodically proclaim that the efficient market hypothesis has "failed"—citing most recently its failure to avert the 2008 stock market crash.[16] As Professor Malkiel explained earlier this year, however, "such obituaries are greatly exaggerated," and both academic research and experience "resounding[ly] confirm[]" the validity of SSEMH.[17]

This is not to say that real-world financial markets exhibit *perfect* informational efficiency. If markets were *perfectly* efficient such that prices reflected all publicly

---

tend to generate detrimental price effects when corporations lie.").

15. *See, e.g.*, Esther Bruegger & Frederick Dunbar, *Estimating Financial Fraud Damages With Response Coefficients*, 35 J. Corp. L. 11, 46 (2009) (noting that "most academic studies accept the hypothesis that capital markets are efficient"); Ivo Welch, *Views of Financial Economists on the Equity Premium and on Professional Controversies*, 73 J. Bus. 501, 537 (2000) (finding that more than 79% of finance academics agreed with the proposition "I believe that, by and large, public securities market prices are efficient").

16. Empirical evidence consistently shows that professionally managed mutual funds more often than not perform less well than their relevant market benchmark indices in any given year. This powerfully confirms just how informationally efficient modern financial markets are. *See* Malkiel, *Random Walk*, at 292; Ray Ball, *The Global Financial Crisis and the Efficient Market Hypothesis: What Have We Learned?* 21 J. Applied Corp. Fin. 8, 8 n.6 (2009).

17. Malkiel, *Random Walk*, at 268-69; *see also* authorities cited in note 31, *infra*.

available information, there would no incentive for *any* investor to analyze public information when making investment decisions—but if investors did not analyze public information, there would be no mechanism for such information to become reflected in market prices, and the markets would not be efficient.[18] Thus, even the most efficient U.S. securities markets, such as those for stocks traded on the New York Stock Exchange ("NYSE"), must be "sufficiently inefficient" so that at the margin sophisticated investors have an incentive to analyze public information.[19] Such markets are more than efficient *enough*, however, to support *Basic*'s fraud-on-the-market presumption.

B. Academic critiques of the efficient markets hypothesis do not undermine its utility.

Since Professor Fama's pathbreaking 1970 article, numerous papers have purported to document findings inconsistent with SSEMH. These critiques—and their refutations—focus on the predictability of stock movements and the corresponding possibility of above-average returns. The well-documented and widespread failures of investment strategies based on these critiques confirms that U.S. financial markets process information

---

18. Sanford Grossman & Joseph Stiglitz, *On the Impossibility of Informationally Efficient Markets*, 70 Am. Econ. Rev. 393, 404-05 (1980).

19. *See, e.g.*, Bradford Cornell & James Rutten, *Market Efficiency, Crashes, and Securities Litigation*, 81 Tul. L. Rev. 443, 447 (Dec. 2006); Zohar Goshen & Gideon Parchomovsky, *The Essential Role of Securities Litigation*, 55 Duke L.J. 711, 730 (2006) (noting that "it is precisely this inefficiency that creates an incentive to invest in information and constantly pushes the market to become more efficient").

very efficiently.[20] And recent research demonstrates that none of the current critiques seriously challenges the explanatory power of the SSEMH.

Researchers periodically identify anomalies in financial markets that allegedly allow investors to make excessive profits based on technical analysis of historical market data.[21] Once identified, however, anomalies tend "to disappear, reverse, or attenuate"[22]—either because they have since been arbitraged away or because they were simply statistical aberrations.[23] It is questionable whether any truly repetitive and exploitable pattern that might be discovered in the stock market can ever be exploited for more than a short period as such anomalies

---

20. Malkiel, *Random Walk* at 267-300; Ball, 21 J. Applied Corp. Fin. at 15 (noting that funds established to take advantage of behavioral strategies failed to outperform the market).

21. A strong publication bias favors reporting anomalous results, as professional journals are likely to find research purporting to identify anomalies in an important theory (such as SSEMH) to be far more interesting than "boring" findings that simply confirm what an already well-accepted existing theory would predict. Malkiel, *Random Walk* at 274; *see also* William Schwert, *Anomalies and Market Efficiency*, in *Handbook of Economics and Finance* 941 (2003).

22. *See, e.g.*, Schwert, *supra*, at 940 (noting that analysis of data from subsequent periods has undermined earlier evidence that returns can be predicted using variables such as dividend yields or inflation).

23. *Id.*; *see also* Malkiel, *Random Walk* at 274 ("[M]any of these predictable patterns may simply be the results of data mining. . . . Given enough time and massaging of data series, it is possible to tease almost any pattern out of most data sets.").

would likely "self-destruct" as larger numbers of other investors sought to exploit it.[24]

One academic critique of the SSEMH, for example, is that securities prices under-react to certain types of news events—notably unexpected dividend announcements and earnings "surprises." Such studies suggest that trading stocks promptly after certain types of news comes out will generate abnormal returns in subsequent days, resulting in short-term price momentum that could theoretically be exploited to generate excess profits.[25] However, as Professor Fama has found, investors often *over-react* to the same types of information, and post-event continuation of abnormal returns is not much more frequent than post-event reversals.[26] Moreover, many of these anomalies disappear when exposed to different models for expected "normal" returns.[27] Most purported anomalies "can reasonably be attributed to chance"[28] and "certainly do not appear to offer investors a dependable way to earn abnormal returns."[29]

27. *See id.* at 284; *see also* Schwert (2003) (noting that careful scrutiny of efficient market anomalies have raised more concerns about the asset pricing models used to construct the expected returns than about the efficiency of the market).

28. Fama, 49 J. Fin. Econ. at 284.

29. Malkiel, *Random Walk*, at 273; *see also* Fama, 46 J. Fin. at 1602 (observing that although "some event studies suggest

Recent critics of the SSEMH have cited the work of behavioral economists, who have suggested that short-run momentum may be caused by certain psychological feedback mechanisms, such as "bandwagon effects." The relevant effects, however, are too small to undermine the basic point of the SSEMH. Other empirical work has demonstrated that an investment strategy predicated on the SSEMH would do much better than a momentum-based strategy, even in periods where some degree of momentum clearly does exist.[30] Even assuming *arguendo* that economic behavioralists and "technical analysts" can ultimately validate their data, it would have only a *de minimis* impact on SSEMH because such data involves such extremely small pricing variances.[31]

Similarly, none of these critiques meaningfully undermines *Basic's* fraud-on-the-market doctrine. To justify a presumption of reliance, the market in question

---

that stock prices do not respond quickly to specific information," "some anomalies, spurious and real, are inevitable"; the "main point" is that "[w]ith few exceptions, the evidence is supportive" of the SSEMH).

30. Malkiel, *Random Walk*, at 276.

31. *See* Malkiel, 17 J. Econ. Perspectives at 61-62. Although "irrational exuberance" and subsequent market crashes do refute "value efficiency" hypotheses that market prices always accurately reflect "true" value, such phenomena do nothing to "refute" the SSEMH. *See, e.g.*, Fischel, 74 Cornell L. Rev. at 915-17; Ball, 21 J. Applied Corp. Fin. at 10; Stephen Brown, *The Efficient Markets Hypothesis: The Demise of the Demon of Chance?* Accounting & Fin. 1, 4 (2010) (noting popular confusion as to what SSEMH really means, and how SSEMH actually implies that market participants will be unable to foresee the collapse of bubbles); Malkiel, *Random Walk* at 267-300.

need only be *efficient enough* to incorporate, to at least some extent, the impact of materially false or misleading new positive information about a company (or, in the case of omitted or concealed new material adverse information, *efficient enough* so that it would have incorporated, to at least some extent, the impact of the concealed information had it been disclosed). Conversely, even assuming *arguendo* that critics can identify anomalies that can be temporarily exploited to generate excess profits by investing in particular securities before market prices "revert to the mean," the market for such securities would have to be decidedly far down the efficiency spectrum before one could reasonably presume that investors would *not* be defrauded if they purchased securities at market prices during a period when company managers were providing materially false or misleading information to the market. Despite the anomalies that have been discovered, the major U.S. securities markets are typically efficient enough to justify the limited presumptions at issue here—that is, that a false statement will impact price at least to some degree. As we discuss further in Part III, this is all that plaintiffs need prove at class certification.

In sum, SSEMH has been subjected to "perhaps the most intensive and extensive testing of any hypothesis in all of the social sciences"—and this extraordinary scrutiny has confirmed the strong empirical support for the theory.[32] Moreover, although SSEMH is not entirely free of anomalies, such anomalies are sufficiently limited that, as a practical matter, the idea that prices efficiently

---

32. Sanjai Bhagat & Roberta Romano, *Empirical Studies of Corporate Law*, in 2 *Handbook of Law and Economics* 948 n. 1 (Polinsky & Shavell, eds 2007).

incorporate information is an indispensable foundation for how we organize the real world.[33] That the hypothesis is not perfect—and does not explain every aspect of every price movement in all circumstances in a complex financial world—is ultimately neither particularly surprising nor significant: all theories have anomalies, and no theory can explain everything.[34]

Although we focus here on the state of the economic literature, it is worth noting that the SSEMH and its fraud-on-the-market corollary is entrenched in Congress's own understanding of the Securities Exchange Act as well as in the Act's implementation by the Securities Exchange Commission. As this Court noted in *Basic*, "Congress expressly relied on the premise that securities markets are affected by information, and enacted legislation to facilitate an investor's reliance on the integrity of those markets." 485 U.S. at 246. Similarly, the SEC has stated that its Form S-3, which applies to registrations of most corporations relevant to this discussion, "is predicated on the Commission's belief that the market operates efficiently for these companies, *i.e.*, that the disclosure in Exchange Act reports and other communications by the registrant, such as press releases, has already been disseminated and accounted for by the market place." Exchange Act Release No. 6331, 46 Fed. Reg. 41,902 (Aug. 18, 1981). Rejecting the SSEMH would thus both fly in the face of economic consensus and upset the fundamental assumptions of the regulatory scheme that Congress enacted.

---

33. Ball, 21 J. Applied Corp. Fin. at 15.

34. *Id.* at 12, citing Thomas Kuhn, *The Structure of Scientific Revolutions* (2d ed. 1970).

The practice of relying on the integrity of market prices for securities is entrenched in commercial practice, law and regulation because actual market security prices are "efficient enough," notwithstanding any occasional anomalies.[35] *Amici* are unaware of any research (let alone tested theory) suggesting that any of the purported anomalies referenced above might be so strong—or the concepts underpinning SSEMH so weak—that the market price for a publicly traded security in the U.S. would *not* be distorted by materially false or misleading public statements by the company's managers, other than in rare circumstances.[36] And in those circumstances, as we discuss in the next section, courts have ample tools for weeding out cases where the fraud-on-the-market presumption is inappropriate.

II. Courts Have Workable and Adequate Means to Assess the Efficiency of the Market for a Security.

Basic left to the lower courts development of appropriate means to assess whether a market trades with sufficient efficiency to justify a presumption that prices on that market react to material public information. Two leading decisions—*Cammer* and *Krogman*—have identified eight widely used factors to assess market efficiency: (1) average weekly trading volume; (2) analyst

---

35. Ball, 21 J. Applied Corp. Fin. at 16. *See also* Fischel, 74 Cornell L. Rev. at 915.

36. Examples might include cases involving securities of companies with such small market capitalization and thin trading that one would doubt the market for them was more than minimally efficient, or where the market recognized the falsity of the statements at issue.

coverage; (3) number of market makers; (4) SEC Form S-3 eligibility; (5) price reaction to unexpected information (*e.g.*, an "event study"); (6) market capitalization; (7) bid-ask spreads; and (8) percentage of shares held by non-insiders (the public "float"). *See Cammer*, 711 F. Supp. at 1285-87; *Krogman*, 202 F.R.D. at 477-78. The financial economics literature does not identify any single test or method for classifying a particular market as "efficient" or "inefficient," and some of these factors are more helpful than others from an economic perspective. In particular, *amici* believe that courts should primarily rely on an event study as the most direct evidence of market efficiency, with the other factors used as a supplement when event study results are inconclusive.

Cammer correctly noted that "one of the most convincing ways to demonstrate [market] efficiency would be to illustrate, over time, a cause and effect relationship between company disclosures and resulting movements in stock price." 711 F. Supp. at 1291. The customary method for establishing such a connection is an "event study," which uses well-accepted statistical methods to isolate the impact of information on market prices.[37] Event studies are not a direct test of market efficiency, but they have now been used for over 30 years to identify markets in which efficiency may be inferred. Such studies have formed the basis for hundreds of academic articles.[38]

---

37. David Tabak & Frederick Dunbar, *Materiality and Magnitude: Event Studies in the Courtroom*, in *Litigation Services Handbook, The Role of the Financial Expert*, Ch. 19 (3d ed. 2001).

38. *See* Sanjai Bhagat & Roberta Romano, *Event Studies and the Law, Part I*, 4 Am. L. & Econ. Rev. 141, 142 (2002) ("The event study methodology is well accepted and extensively used in

An event study begins by specifying a model of what price movements are "expected" based on market factors and then testing whether the deviation from expected price movements are sufficiently large that simple random movement can be rejected as the cause. Thus, a widely accepted method for performing an event study involves preparing a regression model over an appropriate period that quantifies the relationship between the market price of the relevant security and broad general market and industry factors, using actual historical prices and index data. By comparing (a) the dates on which statistically significant abnormal returns were observed to (b) the information that was publicly disclosed during (or immediately preceding) the time period when the market was open for trading on those dates, an empirically valid assessment can then be made of the extent to which new material information, rather than random chance, is responsible for changes in the price of the subject security.[39]

An event study is a highly useful tool for assessing market efficiency, as the absence of price responses to a sample of unambiguously material news disclosures would raise questions about the market's sensitivity to information. Conversely, the presence of statistically

---

finance. . . . Its use in policy analysis in recent years has become more widespread."); John Binder, *The Event Study Methodology Since 1969*, 11 Rev. Quant. Fin. & Acc'ting 111, 111-137 (1998).

39. *See* Bruegger & Dunbar, 35 J. Corp. L. at 33 (noting that event studies only detect impact of unexpected information, given that securities prices are not expected to react to information the market already anticipates). For useful discussions of event study methodology, *see, e.g.* Bhagat & Romano, 2 *Handbook of Law and Economics* at 945; Frank Torchio, *Proper Event Study Analysis in Securities Litigation*, 35 J. Corp. L. 159, 163-64 (2009).

significant price responses to certain events (e.g. unexpected earnings, dividend or merger and acquisitions news, which would be expected by an objective observer to result in a price reaction in a reasonably efficient market) is powerful confirmation of efficiency.[40] The feasibility of this type of general empirical test of market efficiency means that courts will only infrequently need to resort to the other *Cammer/Krogman* factors to assess whether a market exhibits the basic hallmarks of informational efficiency.

Nonetheless, if the basic event study methodology is inconclusive, the other *Cammer/Krogman* factors provide useful additional evidence from which the presence (or absence) of sufficient efficiency may be inferred. For example, average weekly trading volume, measured as a fraction of shares outstanding, can be linked to information dissemination to the market because volume helps investment analysts decide which stocks to follow[41] and is thus a useful indicator of efficiency. Likewise, extensive analyst coverage implies strong interest in and

---

40. It may also be possible to show that even a security that traded on a relatively inefficient market still traded with sufficient efficiency to infer that its market price responded, to at least some extent, to the misrepresentations at issue in the case. As discussed in Part III below, however, such analysis will frequently not be possible absent a full factual record, and is also subject to the inherent risk of being confounded by defendants who have the ability to manipulate the nature and timing of their own disclosures.

41. *See* Randall Thomas & James Cotter, *Measuring Securities Market Efficiency in the Regulatory Setting*, 63 L. & Contemp. Probs. 105, 108 (2000).

demand for information about a company's securities,[42] although the post-*Cammer* explosion of alternative methods by which information is disseminated to investors has made traditional analyst coverage less central.[43] And a security issuer's eligibility to file SEC Form S-3[44] is also a good confirmatory indicator, as it demonstrates the SEC's own "belief that the market operates efficiently for these companies, *i.e.* that the disclosure in [prior filings] and other communications by the registrant, such as press releases, has already been disseminated and accounted for by the market place." *Cammer*, 711 F. Supp. at 1284 (quoting Exchange Act Release No. 6331 46 Fed. Reg. at 41,904). Finally, the prevalence of non-insider holders, particular large institutional holders, of a security is likely a valid indicator of, though not a prerequisite of, market efficiency.[45] Other *Cammer/Krogman* factors, such as the bid-ask spread, large market capitalization, and number of market makers, provide weaker indicators of the degree of market efficiency.

---

42. *See* Brad Barber, Paul Griffin & Baruch Lev, *The Fraud on the Market Theory and Indicators of Common Stock's Efficiency*, 19 Iowa J. Corp. Law 285, 302 (1994).

43. For example, in recent years Internet news and blog coverage, 24-hour cable news networks, email, and other media—as well as online access to SEC filings—have dramatically increased the ability of investors to obtain and monitor information about publicly-traded securities and the market in general.

44. SEC Form S-3 allows certain public companies that have met federal reporting requirements for more than one year to incorporate prior SEC filings by reference without repeating the information. See www.sec.gov/about/forms/forms-3.pdf.

45. *See Krogman*, 202 F.R.D. at 478 (stating that courts should "consider the percentage of shares held by the public, rather than insiders").

For the most part, the *Cammer/Krogman* factors "do not speak directly to efficiency, but instead speak to whether a market is 'open and developed'"; accordingly "they are best understood as constituting an indirect test by which courts infer efficiency for reliance purposes."[46] *Cammer* distinguished between "an *open market* . . . in which anyone, or at least a large number of persons, can buy or sell," "a *developed market* . . . which has a relatively high level of activity and frequency, and for which trading information (e.g., price and volume) is widely available," and an "*efficient market* . . . which rapidly reflects new information in price."[47] But *Basic* itself held that the presumption would be appropriate for all markets that are "open and developed," 485 U.S. at 241-42. Moreover, any distinctions between "open and developed" markets and "efficient" ones are not important from an economic perspective for purposes of determining whether courts reasonably may presume that investors relied on the integrity of a security's market price.

Critiques of the *Cammer/Krogman* approach to judging market efficiency thus have the same limitation as the critiques of the efficient market hypothesis discussed in Part I: They may suggest limitations of the analysis as a matter of economic theory, but the *Cammer/Krogman* factors remain generally useful in the context that courts actually employ them. As Cornell and Rutten explain,

---

46. Cornell & Rutten, 81 Tul. L. Rev. at 455.

47. *Cammer*, 711 F. Supp. at 1276 (citing Bromberg & Lowenfels, *Securities Fraud and Commodities Fraud*, § 8.6 (1988)). As *Cammer* further noted, "[t]hese terms are cumulative in the sense that a developed market will almost always be an open one. And an efficient market will almost invariably be a developed one." *Id.*

> The dispositive question for reliance is not whether the market is truly efficient, *but whether it is efficient enough that reasonable investors can be presumed to have relied on the market price.* The *Cammer* and *Krogman* criteria, by assessing the extent to which the market is "open and developed," attempt to infer the threshold level of efficiency required for reliance. The precise extent to which prices reflect information is irrelevant to the reliance question. As long as any deviations from rational pricing are sufficiently difficult to exploit that reasonable investors ignore them, it is appropriate to presume that investors relied on the integrity of the market price. . . . .

Cornell & Rutten, 81 Tul. L. Rev. at 456. (emphasis added). They thus correctly conclude that "[t]here is . . . little dispute that with respect to such securities, reliance on the integrity of market prices (and thus on the defendants' statements) is appropriately presumed." *Id* at 457. In other words, "[f]rom an economic perspective, the courts in *Cammer* and *Krogman* got it right." *Id* at 456.

III. The Fifth Circuit's Requirement that Plaintiffs Prove Loss Causation at Class Certification is Unwarranted.

The Fifth Circuit in this case required plaintiffs to prove loss causation at the class certification stage as a precondition to the application of *Basic*. The court also stated that, in the alternative, it would allow plaintiffs to establish their entitlement to a presumption of reliance by showing that the market price of the security moved

upward in response to the initial false statement. *Archdiocese of Milwaukee Supporting Fund, Inc. v. Halliburton*, 597 F.3d 330, 335 (5th Cir. 2010). The Fifth Circuit's approach in this case reflects its earlier judgment, in *Oscar Private Equity Investments v. Allegiance Telecom, Inc.*, 487 F.3d 261, 269 (5th Cir. 2007), that "[t]he assumption that every material misrepresentation will move a stock in an efficient market is unfounded, at least as market efficiency is presently measured." That judgment, however, is simply incorrect as a matter of economics. Moreover, it contravenes this Court's analysis in *Basic* as well as Congress's and the SEC's judgments in constructing an enforcement regime predicated on efficient securities markets. It is also, as we stress in this section, a particularly inappropriate judgment to make at the *class certification* stage of a securities lawsuit.

A. The Fifth Circuit's approach goes beyond the economic showing that *Basic* required and misunderstands the significance of securities price reactions.

Rule 23 requires simply that "the questions of law or fact common to class members predominate over any questions affecting only individual members, and that a class action is superior to other available methods for fairly and efficiently adjudicating the controversy." Fed. R. Civ. P. 23(b)(3). When the *Cammer/Krogman* analysis indicates that the market for a particular security is efficient, that means that the *predominant* factors affecting the security's price are the sum of publicly available information about that security. Even if some anomalies persist in that market, it makes sense to presume in such circumstances that the security was affected by public

material information, and that most investors relied on the price as a reflection of that information.

That is all Rule 23 requires, and it is all that *Basic* presumed. As the Court recognized,

> We need not determine by adjudication what economists and social scientists have debated through the use of sophisticated statistical analysis and the application of economic theory. For purposes of accepting the presumption of reliance in this case, we need only believe that market professionals generally consider most publicly announced material statements about companies, thereby affecting stock prices.

485 U.S. at 246-47 n.24. This presumption is rebuttable, moreover, by "[a]ny showing that severs the link between the alleged misrepresentation and either the price received (or paid) by the plaintiff, or his decision to trade at a fair market price." *Id.* at 248. But the burden to make such a showing is on the defendant, once the basic efficiency of the market is established, and the link must be severed not by a general attack on the efficient markets hypothesis but by a particularized demonstration that the plaintiff investors did not rely on that market in this case. Any argument that the market price was restored to its proper level as a result of the market becoming aware of the truth is plainly a common question, and one that is more appropriate for resolution upon a fully developed factual record, rather than at the preliminary class certification stage. *Id.* at 249 n.29.

Oscar's facts demonstrate why *Basic*'s approach makes good sense. *Oscar* involved a claim that a telecommunications company, Allegiance Telecom, had misstated the number of new lines it had installed during the first three quarters of 2001. Later on, Allegiance restated its line counts downwards, while simultaneously also disclosing unexpectedly low earnings and other unfavorable financial information. Allegiance's stock price dropped. The plaintiffs alleged that Allegiance's earlier (and false) line count data had materially inflated its stock price, and that they had been harmed when the underlying truth was disclosed.

The Fifth Circuit, however, refused to apply *Basic*'s presumption that material misstatements affect stock prices. Instead, it suggested "two additional explanations, besides immateriality, for why a misrepresentation might fail to affect the stock price":

> First, it might be that even though the market for the defendant's shares has been demonstrated efficient by the usual indicia, the market is actually inefficient with respect to the particular type of information conveyed by the material misrepresentation, i.e. analysts and market makers do poorly at digesting line-count information. . . . A second possible explanation . . . is that the market was strong-form efficient with respect to that type of information, i.e., due to insider trading, the restated line count was reflected by the stock price well before the 4Q01 corrective disclosure.

Id. at 269. The Fifth Circuit held that plaintiffs must affirmatively prove that Allegiance's misstated line

counts had impacted stock prices, and that to do so the plaintiffs had to show that the price dropped in response to Allegiance's admission that its previous statements had been false. Because simultaneous "confounding" negative information—such as the lower expected earnings—had been disclosed at the same time as the line count restatement, the plaintiffs did not meet their burden (under Fifth Circuit precedent) of proving that the price had dropped specifically in response to the restatement. The court of appeals thus vacated the district court's class certification order. *Id.* at 271.

Contrary to the court of appeals' conclusion, neither the possibility of inefficiency or of "strong form" efficiency, was a reason to "resist application of the semi-strong efficient-market hypothesis." *Id.* Each of the court's speculations involved facts that, if proven, might rebut application of the fraud-on-the-market presumption to Allegiance's stock, and *Basic* incorporates an opportunity for such a showing. But each of *Oscar*'s proffered scenarios is sufficiently atypical that the burden of rebuttal should rest with defendants. Markets are generally able to assimilate various kinds of material technical information, such as line counts in the telecommunications industry (which the Fifth Circuit itself apparently conceded were adequately alleged to be material), and insider trading will only rarely be so pervasive as to render the market for a stock "strong-form efficient." *See* Part I.A, *supra*, (noting that "strong form" efficiency is an exceptional case and decidedly not a presumptive description of how U.S. financial markets actually work).

The bottom line is that, although critics of SSEMH have identified various "anomalies" in securities markets over the years, those anomalies are very slight, occur on

the margin, and have little impact on most investors. Even though security prices may take longer to adjust to some types of information than others, *Basic*'s assumption that a material misstatement will quickly impact securities prices *in some way* remains a highly reasonable assumption, and that is all that is required. *See Basic*, 485 U.S. at 248 (recognizing that reliance only requires a link between the price paid and the misrepresentation). Where plaintiffs can establish the indicia of a "sufficiently efficient" market, it is reasonable to presume that security prices were impacted by materially false or misleading statements to at least some degree. Thus, common issues of reliance predominate under Rule 23, and the burden appropriately shifts to defendants to prove otherwise.

There are also serious analytical problems with requiring plaintiffs to prove that stock prices fell in response to a disclosure that the previous statement was false. Stock prices, as a financial matter, generally represent an estimate of the company's future cash flows.[48] A disclosure that a previous statement was false will only impact stock prices if it simultaneously causes the market to reassess that estimate. But the market may reassess likely future cash flows (and thus adjust the price) for reasons related to the fraud, even absent an admission of the falsity of a prior statement.

For example, a firm may announce that it has a new product with certain features likely to be very attractive to consumers, while simultaneously concealing that the product does not function properly. Investors may gauge

48. *See* Z. Bodie, A. Kane and A. J. Marcus, *Investments* 613 (2d ed. 2009).

the firm's prospects positively, only to reconsider when revenues from product sales fail to meet expectations. The price of the stock would then fall, even in the absence of an admission that any of the company's prior descriptions of the product were false. By the time (if any) that the company actually admits that its product had always been unmarketable, there may be very little, if any, stock price reaction. The market will have "discovered" that information on its own from the company's poor financial performance.

The facts of *Oscar* illustrate the problem with trying to disentangle the impact of multiple disclosures of unfavorable information. There, Allegiance's new "line counts" served as a data point for estimating future revenues, and the market's assessment of that information would have factored into the stock's price. The Fifth Circuit required that the plaintiffs distinguish the impact on Allegiance's stock price of subsequent revelations that the line counts were inflated from the impact of other simultaneously announced unfavorable information, including disappointing earnings. But Allegiance's earnings might well have been disappointing precisely because Allegiance had not installed as many lines as it had previously reported to the market. From a financial perspective, in other words, disentangling Allegiance's line counts from its earnings reports may be a meaningless exercise. *Oscar*'s loss causation standard thus may require plaintiffs to distinguish the impact of events that, in many cases, will not actually be economically distinct.

B. The Fifth Circuit's approach would force courts to undertake a much more doubtful economic inquiry than the *Cammer/Krogman* factors at a premature stage of the case.

The showing required by the Fifth Circuit—either that the stock moved upwards in response to the false statement or dropped upon disclosure of the statement's falsity, *see Halliburton*, 597 F.3d at 335—raises no issues unique to particular plaintiffs and thus would seem to have little to do with the actual issue of commonality under Rule 23. It is, rather apparently, simply an effort to make class certification more difficult because of underlying concerns about the coercive effect of class certification on settlement. *See Oscar*, 487 F.3d at 267 ("We cannot ignore the *in terrorem* power of certification."). But even if it were appropriate for courts to add new requirements to Rule 23 based on such policy concerns, the Fifth Circuit's rule would go too far in the opposite direction.

The primary difference between the Fifth Circuit's approach and the event study methodology discussed in Part II, *supra*, is that while the latter simply requires a demonstration that material information affects the price of the relevant security in a statistically significant manner, the former requires a demonstration that the particular fraudulent statement or omission had that effect. Although in principle one could conduct an event study to "prove" that the price of a security moved in response to a specific piece of false news, there are fundamental reasons to reject such a requirement—especially at class certification.

First, depending on the nature of the defendant's misrepresentation, the necessary event study may simply

be infeasible. For example, if the alleged misconduct involved an omission of material information, "it is an oxymoron to have an event study of an *omitted* piece of information."[49] Moreover, no price reactions would be expected in response to misleading statements that (falsely) reconfirm pre-existing market expectations.[50] Prices only react to *unexpected* news, because *expected* news is already incorporated into the security's market price. Thus, a fraudulently inflated earnings report will have no detectable effect on price (and indeed may have been fraudulently inflated precisely to *avoid* a price drop) if it reports earnings in line with market expectations. Moreover, as the Seventh Circuit pointed out in *Schleicher*, a company may commit fraud to slow its losses rather than to actually raise its stock price. 618 F. 3d at 683-84. Under such circumstances, the stock price may fall, but not nearly as *much* as it would have had the company reported the full truth. A requirement that plaintiffs prove an "uptick" in securities prices following a false statement would thus be *expected* to fail to detect artificial inflation in a significant number of situations where it exists.

Similarly, it is frequently difficult to isolate the market's reaction to a *particular* disclosure—both initially and with respect to disclosure of the fraud—because corporations may announce multiple news items on a single day. Disentangling the effects of each item can pose a difficult challenge. Worse, the timing and manner in which a disclosure is made is almost always controlled by the defendant corporation. If plaintiffs bear the burden of

---

49. *See, e.g.*, Frank Torchio, *Proper Event Study Analysis in Securities Litigation*, 35 J. Corp. Law 159, 163-64 (Fall 2009).

50. *See, e.g.*, Bhagat & Romano, 2 *Handbook of Law and Economics* at 948; Torchio, 35 J. Corp. Law at 164-66.

showing market reaction to a particular disclosure early in the proceedings, corporate managers can be expected to intentionally obscure their disclosures (for example, by dribbling them out over time, or by mixing announcements of "bad" news with simultaneous disclosures of multiple other pieces of information) to render the inquiry as difficult as possible.[51] Even though various techniques exist to sort out confounding factors, doing so before completion of fact discovery and an opportunity to analyze all relevant facts can be expected to produce unreliable results in many cases, raising further questions as to the utility of embarking on such an analysis at an early stage in the litigation. *See generally Schleicher*, 618 F.3d at 686 (explaining that the Fifth Circuit's approach "would do more than just 'tighten' the requirements for class certification. It would make certification impossible in many securities suits, because when true and false statements are made together it is often impossible to disentangle the effects with any confidence").

None of this is to deny that plaintiffs ultimately must prove loss causation to prevail on the merits. But

---

51. For evidence that firms strategically announce information with an eye toward stock prices, *see* Sanjai Bhagat, Ming Dong, David Hirshleifer & Robert Noah, *Do Tender Offers Create Value? New Methods and Evidence*, 76 J. Fin. Econ. 3, 4 (2005) (noting that "firms sometimes deliberately time the announcement of takeover bids to be simultaneous with unrelated announcements"). Likewise, evidence suggests that poorly-performing companies intentionally make their disclosures difficult to read in an attempt to confuse the market about their financial performance. *See* Feng Li, *Annual Report Readability, Current Earnings, and Earnings Persistence*, 45 J. Accounting & Econ. 221 (2008).

proving a stock price decline in response to either partial or complete disclosures relating to a fraud can be highly complex,[52] and courts should not rely on disclosure-specific event studies unless they have been prepared with the benefit of a fully developed factual record.[53] Moving loss causation forward to a pre-merits phase, before the issues in the case have been fully developed, will either render class litigation impracticable or force courts to rely on partial and dubious statistical evidence. At the end of the day, the Fifth Circuit's new requirement threatens to undermine—not enhance—the economic rationality of securities litigation.

---

52. *See*, e.g., Bruegger & Dunbar, 35 J. Corp. L. at 14.

53. Moreover, attempts to assess the statistical significance of a discrete type of company-specific event (such as concealment of a particular type of problem with a company-specific product) may involve a sample size of one, reducing the statistical power of such an analysis. *See* Bhagat & Romano, 4 Am. L. & Econ. Rev. at 149. It is thus even more important to ensure that such studies are prepared on the basis of a full and complete factual record.

CONCLUSION

The decision of the United States Court of Appeals for the Fifth Circuit should be reversed.

Respectfully submitted,

ERNEST A. YOUNG

INTEREST OF AMICI CURIAE[1]

Amici are law professors whose scholarship and teaching focuses on corporate law and the federal securities laws. Law professors have an interest in ensuring that the securities laws are interpreted to accurately reflect both current financial economic scholarship and the historical underpinnings of the securities laws.

Amici include Jonathan R. Macey, Sam Harris Professor of Corporate Law, Corporate Finance and Securities Law at the Yale Law School, and Professor in the Yale School of Management; Adam C. Pritchard, the Frances and George Skestos Professor of Law at the University of Michigan Law School; and M. Todd Henderson, Professor of Law at the University of Chicago Law School.

SUMMARY OF ARGUMENT

In *Basic Inc.* v. *Levinson*, 485 U.S. 224 (1988), the Court held that in a Rule 10b-5 securities fraud suit, plaintiffs may invoke a "presumption of reliance" to gain class certification under Federal Rule of Civil Procedure 23(b)(3), which requires that common questions of law or fact "predominate" over questions particular to individual class members' claims. *Id.* at 241-48. *Basic* held that this presumption was supported by the "fraud on the market theory," which

---

[1] No counsel for a party authored this brief in whole or part, and no counsel or party made a monetary contribution to fund the preparation or submission of this brief. No person other than the amici curiae and their counsel made any monetary contribution to its preparation and submission. The parties have filed letters giving blanket consent to the filing of amicus briefs in this case.

provides that "[a]n investor who buys or sells stock at the price set by the market does so in reliance on the integrity of that price." *Id.* at 247, 250.

Basic grounded its holding on the understanding that "the market price of shares traded on well-developed markets reflects all publicly available information," including "any public material misrepresentations"—a concept embodied in the "efficient capital markets theory." *Id.* at 246-47 & n.24. *Basic* reasoned that because every public material misrepresentation is reflected in a security's price, "an investor's reliance on any public material misrepresentations * * * may be presumed for purposes of a Rule 10b-5 action." *Id.* at 247.

Basic thus combined two distinct concepts: the fraud on the market theory and the efficient capital markets hypothesis. The efficient capital markets hypothesis is not necessary to the use of the fraud on the market theory—as long as the market for a security incorporates the fraudulent information into the price, a "fraud on the market" has occurred, whether the market is efficient or not. But the two concepts can be combined to allow plaintiffs to invoke a presumption of reliance as to a particular instance of alleged fraud if they can first demonstrate that the relevant market was "efficient," *i.e.*, that it "reflect[ed] all publicly available information." *Id.* at 246. In the years before *Basic*, scholars and lower courts championed the simultaneous application of these concepts in the belief that well-developed markets were efficient, and that stock prices within those markets reflected all public information. And while *Basic* claimed "not to assess the general validity of" these theories, *id.* at 242, it nevertheless

accepted them in holding that a presumption of reliance is appropriate when market efficiency has been established.

But *Basic*'s view of the efficiency of capital markets was unrealistic. Rather than being totally "efficient" or "inefficient," securities markets enjoy varying degrees of efficiency, and therefore incorporate information at varying rates. Although amici accept that some well-developed markets incorporate most information into prices relatively quickly, empirical research conducted since *Basic* suggests that even the most open markets are not completely efficient, and will therefore incorporate some information slowly (or not at all). In light of this evidence, *Basic*'s understanding that a particular alleged fraud will necessarily be incorporated into the stock price is no longer sound.

Moreover, the lower courts' attempts to estimate efficiency have been inconsistent and empirically inaccurate. Faced with the difficult task of determining whether a market is "efficient"—a task for which they are ill-equipped—courts have resorted to examining proxies for efficiency as reflected in multifactor tests. Many of the proxies are highly correlated with each other (and therefore redundant), while others have little empirical relationship with efficiency; what is more, there is confusion about how to weigh the various factors. The result is a doctrinal and empirical muddle for both courts and litigants.

Use of the efficient capital markets hypothesis to show reliance becomes even more questionable when one considers that the fraud on the market theory does not require it. Rather, the core inquiry in

whether the fraud on the market presumption of reliance is appropriate is whether the market as a whole relied on allegedly fraudulent information. Therefore, all that is necessary is evidence of a misstatement's effect on a security's market price. In light of this, and of the difficulties in evaluating efficiency, the Court should shift the focus of fraud on the market inquiries from a market's overall efficiency to the question whether the fraud at issue affected market price. The decision below should be affirmed because it correctly focuses on the market effect of the alleged misstatements at issue.

ARGUMENT

I. *BASIC*'S USE OF MARKET EFFICIENCY AS A MEANS OF SHOWING RELIANCE IS UNNECESSARY AND COUNTERPRODUCTIVE

Plaintiffs bringing a Rule 10b-5 securities fraud claim must prove they relied upon the company's alleged misrepresentation when deciding to trade the company's security. *Basic,* 485 U.S. at 243. Traditionally, such reliance is determined on an individualized basis. Cf. *id.* at 242; see also *In re Salomon Analyst Metromedia Litig.*, 544 F.3d 474, 481 (2d Cir. 2008). But in the context of securities fraud class actions, which often can be maintained only when common questions of law or fact predominate over individual questions, see Fed. R. Civ. P. 23(b), "[r]equiring proof of individualized reliance from each member of the proposed plaintiff class effectively would * * * prevent[] [plaintiffs] from proceeding with a class action, since individual issues then would * * * overwhelm[] the common ones." *Basic*, 485 U.S. at 242.

In *Basic*, the Court allowed plaintiffs to invoke a "presumption of reliance" in lieu of showing individual reliance in class-action cases, by combining two then-new economic theories. The first of these was the semi-strong version of the efficient capital markets hypothesis, see *In re Res. Am. Sec. Litig.*, 202 F.R.D. 177, 189 n.12 (E.D. Pa. 2001), which postulates that "security prices fully reflect all available information," Eugene F. Fama, *Efficient Capital Markets: II*, 46 J. Fin. 1575, 1575 (1991); see *Basic*, 485 U.S. at 246 ("[T]he market price of shares traded on well-developed markets reflects all publicly available information, and, hence, any material misrepresentations."). Second was the fraud on the market theory, which provides that reliance may be presumed where "a fraud affects the price of a publicly traded security [because] investors will be affected even if they trade without knowledge of the misrepresentations that influenced the price at which they traded." *Stark Trading* v. *Falconbridge Ltd.*, 552 F.3d 568, 572 (7th Cir. 2009); accord *Basic*, 485 U.S. at 247.

Basic combines these two concepts in its conclusion that if a market is efficient, then all information, including any material misstatement, is incorporated into a security's price, and any investor buying a security when a misstatement is incorporated into the price relies on it by purchasing at the inflated price. *Basic*, 485 U.S. at 247. Combining these concepts, the *Basic* Court concluded:

> An investor who buys or sells stock at the price set by the market does so in reliance on the integrity of that price. Because most publicly available information is reflected in market price, an

> investor's reliance on any public material misrepresentations, therefore, may be presumed for purposes of a Rule 10b-5 action.

Id.

Although the Court noted that it would not "determine by adjudication what economists and social scientists have debated through the use of sophisticated statistical analysis and the application of economic theory," it also observed that then-recent "empirical studies have tended to confirm * * * that the market price of shares traded on well-developed markets reflects all publicly available information, and, hence, any material misrepresentations." *Id.* at 246-47 & n.24.

Based on this language, courts and commentators have generally interpreted *Basic* to allow plaintiffs to employ the fraud on the market theory only if they can demonstrate that the relevant market "reflects all publicly available information," a quality known as "efficiency."[2] See, *e.g.*, *Gariety* v. *Grant Thornton, LLP*, 368 F.3d 356, 368 (4th Cir. 2004) ("*Basic* clearly requires that a market be efficient in order for the fraud-on-the-market presumption of reliance to be invoked * * * ."). Although *Basic* indicated in a footnote that a market need only incorporate "most" information, see *Basic*, 485 U.S. at 246 n.24, other

---

[2] As discussed below, lower courts and commentators do not agree as to the level of efficiency necessary—just that some showing of a baseline of efficiency is required. Perfect efficiency is an unrealistic scenario. Fama, *supra*, at 1575 (stating that because there are information and trading costs in any market, the hypothesis that there is total market efficiency is "surely false").

language in the opinion, see *id.* at 246, as well as many of the sources it cites, state that the relevant market must reflect "all" information to be efficient. See *In re PolyMedica Corp. Sec. Litig.*, 432 F.3d 1, 11-12 (1st Cir. 2005) (collecting authorities).

As set forth below, however, an examination of the efficiency of markets is not necessary for determining reliance or establishing the existence of a fraud on the market; it is not even the best means of determining reliance, even in the context of class actions.

A. Examining Efficiency Is Unnecessary to Demonstrate "Fraud on the Market"

Although "*Basic* seems to insist on" a showing that a market is efficient to support a fraud on the market claim, Donald C. Langevoort, *Theories, Assumptions, and Securities Regulation: Market Efficiency Revisited*, 140 U. Pa. L. Rev. 851, 899 (1992), there is no basis in logic or experience for such a requirement. To maintain a Rule 10b-5 action, a plaintiff must show only that he relied on the particular false statements at issue. Even if the plaintiff seeks to invoke the fraud on the market presumption, it should be unnecessary to demonstrate that the market is efficient as a *general* matter. Proving that a market is generally highly efficient, and thus tends to incorporate all information quickly, is unnecessary to demonstrating that there has been a fraud on the market as to a specific statement. As long as a market functions well enough that the specific representation at issue was incorporated into a security's price, see Daniel R. Fischel, *Efficient Capital Markets, the Crash, and the*

Fraud on the Market Theory, 74 Cornell L. Rev. 907, 911 (1989), a showing of general efficiency is unnecessary. See Jonathan R. Macey et al., *Lessons from Financial Economics: Materiality, Reliance, and Extending the Reach of* Basic v. Levinson, 77 Va. L. Rev. 1017, 1021 (1991); Nathaniel Carden, Comment, *Implications of the Private Securities Litigation Reform Act of 1995 for Judicial Presumptions of Market Efficiency*, 65 U. Chi. L. Rev. 879, 904 (1998) (stating that "adherence to the [efficient capital markets hypothesis] is not critical for the fraud-on-the-market theory"). Petitioner's amici financial economists appear to agree: "To justify a presumption of reliance, the market in question need only be *efficient enough* to incorporate * * * the impact of materially false or misleading new positive information about a company * * *." Financial Economists' Amicus Br. 14-15. Even *Basic* places some focus on market movement at the rebuttal stage. *Basic*, 485 U.S. at 248. Perfect market efficiency may be "a sufficient reason why an investor relying on market-price integrity would be harmed" by fraud, but is not a necessary one "because fraud can and does distort prevailing prices" even in inefficient markets. Donald C. Langevoort, Basic *at Twenty: Rethinking Fraud on the Market*, 2009 Wis. L. Rev. 151, 161 (2009).

The fraud on the market theory effectively "shift[s] the inquiry from whether an individual investor was fooled to whether the market as a whole was fooled" by a particular misstatement. *In re Verifone Sec. Litig.*, 784 F. Supp. 1471, 1479 (N.D. Cal. 1992); see also Fischel, *Efficient Capital Markets, supra*, at 907. The efficient capital markets hypothesis, in contrast, provides a basis for the

assumption that the market would be fooled by *any and all* instances of fraud. But such a showing is unnecessary to demonstrate that the market was fooled as to a particular statement. As one scholar has observed, "[t]he only important question is whether the price was distorted," which requires only that the information was incorporated into the price of the individual stock, not that the market is efficient as a general matter. Langevoort, *Theories, supra*, at 898-99.

The understanding that perfectly efficient markets are unnecessary for application of the fraud on the market theory is borne out by the conception of that theory before *Basic*. The efficient capital markets hypothesis was first combined with the fraud on the market theory in the 1980s. See Jeffrey L. Oldham, Comment, *Taking "Efficient Markets" out of the Fraud-on-the-Market Doctrine after the Private Securities Litigation Reform Act*, 97 Nw. U. L. Rev. 995, 1006-11 (2003). Before that time, the fraud on the market presumption was described "as being predicated on a showing that 'the plaintiff establishes that a lie, misleading statement, or omission has affected the price of the stock.'" *Id.* at 1007 (quoting *Flamm* v. *Eberstadt*, 814 F.2d 1169, 1179 (7th Cir. 1987)); see also 4 Alan R. Bromberg & Lewis D. Lowenfels, Bromberg & Lowenfels on Securities Fraud and Commodities Fraud § 7:468 (2d ed. 2000) ("This text first suggested in 1967 that a 10b-5 reliance requirement in open market transactions could be satisfied by showing that an investor who traded with reference to market price and conditions could be treated as indirectly relying on a misrepresentation which affected the market.").

Thus, the inquiry concerned the effect of a particular piece of information on the stock in question.

But courts and commentators began to employ the efficient capital markets hypothesis, emphasizing that if a plaintiff could show that a market was efficient, then *any* material misrepresentation in a case necessarily affected the price of the security. Oldham, *supra*, at 1010-11 (citing *In re LTV Sec. Litig.*, 88 F.R.D. 134, 142-46 (N.D. Tex. 1980); Daniel R. Fischel, *Use of Modern Finance Theory in Securities Fraud Cases Involving Actively Traded Securities*, 38 Bus. Law. 1, 9-10 (1982); Note, *The Fraud-on-the-Market Theory*, 95 Harv. L. Rev. 1143, 1154-56 (1982); Note, *Fraud on the Market: An Emerging Theory of Recovery Under SEC Rule 10b-5*, 50 Geo. Wash. L. Rev. 627, 647-53 (1982)); see also *Peil* v. *Speiser*, 806 F.2d 1154, 1163 (3d Cir. 1986) (stating that "a well-developed market can reasonably be presumed to respond to even a single material misrepresentation or omission concerning a stock * * * traded in that market"); Roger J. Dennis, *Materiality and the Efficient Capital Market Model: A Recipe for the Total Mix*, 25 Wm. & Mary L. Rev. 373, 374-75 (1984). *Basic* relied on several of these sources for its conclusion that well-developed markets reflect all public information. *Basic*, 485 U.S. at 246 n.24 (citing Dennis, Fischel, and *LTV*). Conversely, it was understood that if a market were *not* completely efficient, the fraud on the market presumption would be inappropriate. See *Reingold* v. *Deloitte Haskins & Sells*, 599 F. Supp. 1241, 1264 (S.D.N.Y. 1984) ("By contrast with efficient markets, inefficient markets by definition do not translate all available information into the price. In such markets, the price of a security does not necessarily reflect all

[information and] an inference of * * * reliance is inapposite." (citation omitted)).

Thus, the efficient capital markets hypothesis "effectively became a proxy for showing that the misrepresentation actually affected the stock price." Oldham, *supra*, at 1011; accord Langevoort, *Theories*, *supra*, at 890-91 ("The fraud-on-the-market theory is often understood to carry with it the second presumption that in an efficient market, a material misrepresentation or actionable omission influences the market price, and therefore removes the need to actually prove the impact.").

The fact that total market efficiency is *unnecessary* to establish fraud on the market is not itself reason to eliminate the requirement of such a showing. But as noted below, reference to market efficiency has disadvantages that counsel use of a different mechanism for demonstrating reliance.

B. *Basic*'s Efficiency Requirement Is Poorly Tailored to Remedy Fraud on the Market

Experience has shown that efficiency is not an especially close proxy for reliance, providing a remedy that is both underinclusive in some respects and overinclusive in others.

Basic's focus on the overall efficiency of a market, rather than the effect of the specific misstatement at issue, needlessly limits the ability of investors to employ the class-action mechanism with respect to fraud perpetrated in less efficient markets, even when the market price reflects those misstatements. Under prevailing caselaw in the lower courts, *Basic*'s presumption of reliance has been held to be

unavailable to investors in newly issued securities, see *In re Initial Pub. Offerings Sec. Litig.*, 471 F.3d 24, 42 (2d Cir. 2006); *Freeman* v. *Laventhol & Horwath*, 915 F.2d 193, 199 (6th Cir. 1990), mortgage-backed bonds, see *Teamsters Local 445 Freight Div. Pension Fund* v. *Bombardier Inc.*, 546 F.3d 196, 210 (2d Cir. 2008), and securities in less developed markets, see *Krogman* v. *Sterritt*, 202 F.R.D. 467, 474-78 (N.D. Tex. 2001), even when the false statement at issue is significant. A class-action remedy is frequently unavailable because the class cannot show efficiency.

This outcome is unfortunate because it is "in regard to the stock of small companies, traded over the counter or on non-traditional exchanges, that the kinds of fraud Rule 10b-5 was designed to avert are most likely to occur." Geoffrey Christopher Rapp, *Proving Markets Inefficient: The Variability of Federal Court Decisions on Market Efficiency in* Cammer v. Bloom *and its Progeny*, 10 U. Miami Bus. L. Rev 303, 322-23 (2002); see also Advisory Comm. on Smaller Public Companies, Final Report to the U.S. Securities & Exchange Commission 139 (2006) (2006), *available at* http://www.sec.gov/info/smallbus/acspc/acspc-finalreport.pdf (noting that "small firms consistently have more misstatements and restatements of financial information, nearly twice the rate of large firms"). If the rationale for fraud on the market is that investors should be able to rely on securities markets being free from fraud, as Petitioner's amici argue,[3] it makes little sense to

[3] See Br. for Law Professors as Amici Curiae Supporting Petitioner 13 ("The statute and rule [of Section 10(b) and Rule 10b-5] are designed to foster an expectation that securities

focus on market efficiency, which effectively limits the presumption of reliance to only the largest and most trustworthy securities issuers.

Just as the emphasis on efficiency is underinclusive as to strong fraud cases perpetrated in less efficient markets, it is overinclusive, as a practical matter, as to weak fraud cases involving more efficient markets. "For large-cap stocks, there is seldom any debate over whether the market is efficient enough: efficiency is assumed." Langevoort, Basic *at Twenty*, *supra*, at 173. Thus, plaintiffs suing a widely traded issuer can be certified as a class even in cases where the market, due to the obscurity or complexity of the information (or some other reason), did not actually rely on the misstatements. Although defendants can assert a lack of actual reliance as a defense on the merits, as a practical matter, once a class action is certified, such cases are overwhelmingly likely to settle.[4] Because such

---

markets are free from fraud—an expectation on which purchasers should be able to rely" (quoting *Blackie* v. *Barrack*, 524 F.2d 891, 907 (9th Cir. 1975))).

[4] See Jordan Milev et al., *Trends 2010 Year-End Update* 15 (Dec. 14, 2010) (unpublished manuscript), *available at* www.nera.com/nera-files/PUB_Year_End_Trends_1210.pdf (noting that since "December 1995, over 3,400 [securities class actions] have been filed, and over that time only 28 cases have gone to trial"); Richard A. Nagareda, *Class Certification in the Age of Aggregate Proof*, 84 N.Y.U. L. Rev. 97, 99 (2009) (observing that class certification usually "sets the litigation on a path toward resolution by way of settlement"), Bruce H. Kobayashi & Larry E. Ribstein, *Class Action Lawyers as Lawmakers*, 46 Ariz. L. Rev. 733, 743 (2004) (stating that "many certified class actions settle quickly"); Bryant G. Garth, *Studying Civil Litigation Through the Class Action*, 62 Ind. L.J. 497, 501 (1987) (reporting

settlements are most easily procured from the largest and most well-traded companies (which have the most to lose and can most readily afford them), they create a significant impact on the capital markets. Such an overinclusive standard is counterproductive.

C. Market Efficiency Determinations Are Difficult for Courts to Make

Basic permits plaintiffs, upon a showing of efficiency, to substitute a rebuttable presumption of reliance for a showing that the alleged misrepresentations at issue actually influenced the market price. This substitution suggests both that the efficient capital markets hypothesis is a sound explanation for market movements and that evaluating a security's overall efficiency is more practicable than determining whether the misstatement at issue actually distorted the market price. See *Litton Indus., Inc.* v. *Lehman Bros. Kuhn Loeb Inc.*, 967 F.2d 742, 748 (2d Cir. 1992) ("To saddle a plaintiff with proving the 'generally indeterminable fact of what would have happened but for the omission [or the misrepresentations that skewed the market value of stock] would reduce the protection against fraud afforded by Section 10(b)." (quoting *duPont* v. *Brady*, 828 F.2d 75, 78 (2d Cir. 1987))). But it is now recognized that markets are rarely, if ever, totally efficient, and showing efficiency is in most cases a more difficult task than demonstrating distortion of market price caused by a particular misstatement.

---

a 78% settlement rate for certified class actions and only a 15% settlement rate for noncertified cases).

1. Since *Basic* Was Decided, Research Has Called the Efficiency of Markets into Question

In employing the efficient capital markets hypothesis to support a presumption of reliance, *Basic* observed that "empirical studies have tended to confirm * * * that the market price of shares traded on well-developed markets reflects all publicly available information, and, hence, any material misrepresentations." 485 U.S. at 246. The decision thus relied on the understanding that "[r]esearchers agree that the efficient capital market model," which "posits that the price of a security reflects all publicly available information[,] * * * accurately represents the pricing behavior of stocks." Dennis, *supra*, at 374-75; see *Basic*, 485 U.S. at 246 n.24 (citing Dennis). On that basis, courts and commentators have concluded that *Basic* implicitly endorsed the semi-strong form of the efficient capital markets hypothesis, which posits that "an efficient market is one in which all publicly available information is reflected in the market price of the stock." *PolyMedica*, 432 F.3d at 10 n.16.[5]

The *Basic* Court's confidence in the efficient capital markets hypothesis was a product of its time. See Lynn A. Stout, *The Mechanisms of Market Inefficiency: An Introduction to the New Finance*, 28 J. Corp. L. 635, 635 (2003) (noting that by the 1980s the efficient capital markets hypothesis "became one of the most widely-accepted and influential ideas in finance economics"); Ronald J. Gilson & Reinier H.

---

[5] See also, *e.g.*, *Schleicher* v. *Wendt*, 618 F.3d 679, 685 (7th Cir. 2010).

Kraakman, *The Mechanisms of Market Efficiency*, 70 Va. L. Rev. 549, 549 (1984) ("Of all recent developments in financial economics, the efficient capital markets hypothesis * * * has achieved the widest acceptance by the legal culture.") However, as economists' understanding of capital markets has deepened, they have tempered their faith in the efficiency that was so prevalent in *Basic*'s day.

Contrary to the view of efficiency *Basic* appears to have accepted, "efficiency is not a binary, yes or no question." Langevoort, Basic *at Twenty*, *supra*, at 167. Rather, there is a spectrum of levels of market efficiency, see Gilson & Kraakman, *supra*, at 560, and "[p]erfect efficiency is just a theoretical ideal," Langevoort, Basic *at Twenty*, *supra*, at 167. Levels of efficiency even vary among types of information concerning the same market: If one piece of information is more easily collected and understood than another, it will make its way into the market price more quickly, even if both pieces of information concern the same security. See Brad M. Barber et al., *The Fraud-on-the-Market Theory and the Indicators of Common Stocks' Efficiency*, 19 J. Corp. L. 285, 290-91 (1994); Gilson & Kraakman, *supra*, at 558-59.[6]

---

[6] See also Stout, *supra*, at 656.

> Information that is easy to understand and that is trumpeted in the business media—for example, merger announcements or news of a stock split—may be incorporated into market prices almost instantaneously. But information that is "public" but difficult to get hold of, or information that is complex or requires a specialist's knowledge to comprehend, may take weeks or months to be fully incorporated into prices. Indeed it may never be fully incorporated at all.

"For example, stock prices may reflect certain types of public information (concerning, for instance its own prices, or the interest rate on Treasury Bills) faster than other types of public information (concerning, for example, Iraq's invasion of Kuwait)." Ian Ayres, *Back to* Basics: *Regulating How Corporations Speak to the Market*, 77 Va. L. Rev. 945, 976 (1991).

And because no real-world market is completely efficient, information—even important, publicly disseminated information—is not always rapidly incorporated into prices. For example, there is evidence of large disparities in market reaction to accounting restatements as a result of the prominence of the restatements. See Rebecca Files et al., *Stealth Disclosure of Accounting Restatements* (Apr. 27, 2009), *available at* http://papers.ssrn.com/sol3/papers.cfm?abstract_id=1395768. Similarly, there is evidence that the *Wall Street Journal*'s publication of reports of trading by corporate insiders rapidly and significantly affects that corporation's stock price, even though the SEC usually makes such reports public several days earlier. See Saeyoung Chang & David Y. Suk, *Stock Prices and the Secondary Dissemination of Information: The Wall Street Journal's "Insider Trading Spotlight" Column*, 33 Fin. Rev. 115, 115-17 (1998). And "[o]ne of the most common types of material disclosures—an earnings surprise—actually takes a while to be fully impounded, even for large-cap stocks, and even varies depending on whether it is good news or bad." Langevoort, Basic *at Twenty*, *supra*, at 170. The efficient capital markets hypothesis would suggest that such material, public information would be quickly incorporated into stock prices, but empirical evidence indicates otherwise.

In the same vein, in *In re Merck & Co. Securities Litigation*, 432 F.3d 261 (3d Cir. 2005), information regarding Merck—a large and well-followed firm in a well-developed market—was first released to the public in a complicated format through an SEC filing, to no demonstrable market effect. *Id.* at 269-70. As one scholar has noted, "it is hard to imagine any stock more likely traded in an efficient market than Merck," Langevoort, Basic *at Twenty*, *supra*, at 174, and so the efficient capital markets hypothesis would suggest that this information would rapidly be incorporated in price. But when an article in the *Wall Street Journal* "read[] between the lines of this disclosure" several weeks later, the result was a significant decline in price. *Merck*, 432 F.3d at 263, 265. The court of appeals determined on this basis that the information was immaterial—even though the markets' response to the *Journal* article clearly militates against that conclusion—because "the efficient market hypothesis suggests that the market made these basic calculations months earlier." *Id.* at 271. But also plausible is the possibility that the market had not actually incorporated the information when first released in the more obscure format.[7] Commentators have identified many other instances in which markets have moved inefficiently.[8]

---

[7] See, *e.g.*, Langevoort, Basic *at Twenty*, *supra*, at 176 (noting possibility that market missed implications of Merck's initial disclosures).

[8] See, *e.g.*, Langevoort, Basic *at Twenty*, *supra*, at 175 (stating that "the contemporary literature suggests that even for widely traded stocks, substantial deviations from the efficiency ideal are quite possible"), Marlene A. Plumlee, *The Effect of Information Complexity on Analysts' Use of That Information*, 78 Acct. Rev. 275, 293 (2003) (concluding that analysts fail to

Early research on the efficient capital markets hypothesis—the kind of research available at the time *Basic* was decided—focused on types of information that are usually rapidly incorporated into market prices (such as "stock splits, dividend changes, corporate mergers, and the like"). Stout, *supra*, at 653. But other "types of information highly relevant to assessing the economic health of firms appear to be incorporated into stock prices far more slowly and incompletely than the conventional view of market efficiency would suggest." *Id.* Researchers also analyzed broad-based indices rather than individual securities, which brought about results showing efficiency and obscured anomalous results involving particular securities. See Frederick C. Dunbar & Dana Heller, *Fraud on the Market Meets Behavioral Finance*, 31 Del. J. Corp. L. 455, 525 (2006).

Post-*Basic* research reveals significant limitations on the efficient capital markets hypothesis. This is not to say that markets never rapidly incorporate most public information. But exceptions to the

---

incorporate complex information in forecasts); Gur Huberman & Tomer Regev, *Contagious Speculation and a Cure for Cancer: A Nonevent that Made Stock Prices Soar*, 56 J. Fin. 387 (2001) (noting significant market effect of prominent news item concerning information that had been public for months); Peter Klibanoff et al., *Investor Reaction to Salient News in Closed-End Country Funds*, 53 J. Fin. 673 (1998) (concluding that well-publicized news items were more likely to move the market than redundant information found elsewhere, and that well-publicized news events created short periods in which the relevant markets reacted more quickly to changes); Thomas S.Y. Ho & Roni Michaely, *Information Quality and Market Efficiency*, 23 J. Fin. & Quantitative Analysis 53 (1988) (finding market effect from republication of already available information).

hypothesis exist, even as to material information in relatively efficient markets. In light of this research, *Basic*'s assumption that a market deemed efficient will promptly and reliably reflect a *particular misstatement* into a security's price—which is, at bottom, what courts consider to be a "fraud on the market"[9]—is no longer consistently accurate.

2. Courts and Commentators Have Struggled with Determining When a Particular Market Is Sufficiently "Efficient" to Support a Presumption of Reliance

Basic requires courts to determine whether markets are "efficient" or "not efficient." But that is easier said than done. As seen above, markets exist along a spectrum of efficiency rather than at either end, and *Basic* offers no guidance about the point at which a market becomes efficient enough to qualify for the presumption of reliance. Moreover, the determination of efficiency is inherently difficult to make. Not even financial economists have been able to develop an agreed-upon test to prove efficiency. Because economists "do not know how to []calculate the price that fully reflects the available information," it is difficult at best to test whether a market fully reflects all publicly available information. Alon Brav & J.B. Heaton, *Market Indeterminacy*, 28 J. Corp. L. 517, 525 (2003); Fama, *supra*, at 1575 ("[M]arket efficiency per se is not

---

[9] See *Verifone*, 784 F. Supp. at 1479 ("The fraud-on-the-market theory * * * shifts the inquiry from whether an individual investor was fooled to whether the market as a whole was fooled").

testable."). Perfect efficiency is not a realistic scenario. See Fama, *supra*, at 1575.

If efficiency determinations are difficult (if not impossible) for economists, they are harder still for courts: Determining efficiency "requires courts to drift far from their institutional competence." Carden, *supra*, at 905. Because of difficulties in determining market efficiency, courts have resorted to examining proxies associated with efficient markets. If the proxies indicate a sufficiently large and developed market, the market is deemed efficient. The most prominent of the tests developed by the courts is that set forth in *Cammer* v. *Bloom*, 711 F. Supp. 1264 (D.N.J. 1989). The proxies examined by *Cammer* were the percentage of shares traded weekly; whether "a significant number" of analysts follow and report on the stock; the existence of market makers trading the stock; whether the issuer was qualified to use an S-3 registration statement with the SEC; and whether the plaintiff can "allege empirical facts showing a cause and effect relationship between unexpected corporate events or financial releases and an immediate response in the stock price." *Id.* at 1286-87. Other courts have also looked to other proxies, including market capitalization, see *Krogman*, 202 F.R.D. at 478, bid-ask spread, *id.*, percentage of stock held by insiders, *id.*, and volume of trading by institutional investors, *O'Neil* v. *Appel*, 165 F.R.D. 479, 503 (W.D. Mich. 1996). But these indicators are only proxies for efficiency. See Financial Economists' Amicus Br. 3 (stating that many of these factors "are indirect indicators of efficiency, and their role should generally be limited to confirming an evaluation of general market efficiency in cases where an event

study's conclusions are questionable or unclear"). These courts, then, took *Basic*'s already-relaxed concept of reliance—essentially a proxy for individual reliance adopted to allow more plaintiffs to bring securities class actions—and relaxed it further by allowing proxies for efficiency rather than the inquiry into actual efficiency *Basic* required.

What is more, the factors lower courts consider in determining efficiency frequently are unmoored from efficiency. Apart from being highly correlated with each other (and therefore redundant),[10] research indicates that some often-considered factors considered proxies for efficiency, such as the number of market makers, issuer size, bid-ask spread, and institutional holdings, are not empirically correlated with efficiency. See Barber et al., *supra*, at 285-86; Victor L. Bernard et al., *Challenges to the Efficient Market Hypothesis: Limits to the Applicability of Fraud-on-the-Market Theory*, 73 Neb. L. Rev. 781, 796 (1994). As a result of this research, some courts have reduced the emphasis on market makers. See, *e.g.*, *Unger* v. *Amedisys Inc.*, 401 F.3d 316, 324 (5th Cir. 2005). But even these courts persist in considering other less reliable factors, and many other courts continue to use all the *Cammer* factors. See, *e.g.*, *In re Dynex Capital, Inc. Sec. Litig.*, No. 05 Civ. 1897, 2011 WL 781215, at *5 (S.D.N.Y. Mar. 7, 2011) (examining market makers).[11] And even the

---

[10] Barber et al., *supra*, at 293 ("[G]iven that most efficiency drivers are correlated, as the volume of trade and firm size are, they cannot be considered as independent efficiency indicators").

[11] See also, *e.g.*, *In re HealthSouth Corp. Sec. Litig.*, 261 F.R.D 616, 635 (N D. Ala. 2009); *In re Infineon Techs. AG Sec. Litig.*, 266 F.R D. 386, 396-97 (N.D. Cal 2009).

Cammer factor most closely correlated with efficiency—the speed at which the stock incorporated other information in the past—may not say much about how quickly the market incorporated the information at issue in a particular case, because different types of information (and information disclosed through different sources) are incorporated at different rates.

This problem is compounded by the fact that many proxies closely correlated with efficiency do not actually test efficiency. See David Tabak, *Use and Misuse of Event Studies to Examine Market Efficiency* 2 (Apr. 30, 2010) (unpublished manuscript), *available at* www.nera.com/nera-files/PUB_Use_Misuse_of_Event_Studies_0410_final.pdf) (noting that, with the exception of response of prices to new information, "factors cited by courts are designed to be conditions that are likely to either be conducive to or the result of an efficient market"). Thus, their correlation with efficiency may be diminished in the future. For example, the studies noted above, which indicate that dollar trading volume is indicative of efficiency, were published in 1994. Since then, internet trading has risen in popularity, increasing the number of novice investors and adding to overall trading volume.[12] This added volume does not mean that the market became more efficient—in fact, internet traders and

---

[12] See Brad M. Barber & Terrance Odean, *The Internet and the Investor*, 15 J. Econ. Persp. 41, 41, 47 (2001) (stating that "[f]rom 1995 through mid-2000, investors opened 12.5 million on-line brokerage accounts" and that evidence suggests that access to internet trading leads to a greater volume of trading); Gregory La Blanc & Jeffrey J. Rachlinski, *In Praise of Investor Irrationality*, *in* The Law and Economics of Irrational Behavior 542, 558-59 (Francesco Parisi & Vernon L. Smith eds. 2005).

day traders often add to stock volatility without causing the stock price to reflect available information any more quickly. See William O. Fisher, *Does the Efficient Market Theory Help Us Do Justice in a Time of Madness?*, 54 Emory L.J. 843, 930 (2005) (noting that "large trading volume does not—if significantly including day trading and other online retail brokerage transactions—signal that the mechanism for efficient market pricing is actively working on the stock price"). Thus, trading volume probably is not as closely correlated with efficiency now as it was in 1994.

The relationship between analyst following and efficiency has been questioned in light of a similar change in market circumstances. See *id.* at 966-68 (noting that analyst bias during the dot-com bubble of 1998-2001 rendered analyst following an unsound predictor of efficiency during that period). More broadly, because most of the *Cammer* factors "are largely *descriptive*, not *predictive*," and cannot "be used directly to predict efficiency," Rapp, *supra*, at 319, there is always a risk that changes such as the internet trading explosion will confound the factors' correlative strength. Because there inevitably will be lag time in understanding changes in the securities market, when such changes occur, courts may not apprehend their significance for years. Thus, courts' tests for efficiency may include factors that do not accurately reflect the operation of the market.

In addition, courts consider these factors in inconsistent ways. The caselaw is unclear about how much of a factor is necessary to show efficiency, or whether a combination of factors is required. Courts are "ill-equipped to determine and analyze the

fundamentals of market efficiency; *i.e.*, * * * 'how many' analysts [a]re needed to ensure that information concerning a company finds its way, through buy and sell recommendations, into the price of a company's stock, and 'how many' market makers [a]re needed to ensure the market's 'swift' incorporation of company news into the price of a company's stock." Paul A. Ferillo et al., *The "Less Than" Efficient Capital Markets Hypothesis: Requiring More Proof from Plaintiffs in Fraud-on-the-Market Cases*, 78 St. John's L. Rev. 81, 93 (2004). Thus, courts applying *Cammer* factors have come to disparate conclusions when evaluating similar facts. See Rapp, *supra*, at 309-317, 328. The result is "a massive hodgepodge of * * * outcomes." Ferillo, *supra*, at 102 (reviewing cases and concluding "most courts will come to very individual conclusions" on efficiency and find different factors persuasive).

In view of the difficulties courts face in determining the efficiency of markets, this Court should reconsider the role *Basic* has assigned to the efficiency determination in assessing reliance. As one scholar has observed:

> Given the well-acknowledged practical and conceptual difficulties of determining what is or is not a truly efficient market—various conundra that all stem from treating efficiency as a yes/no question rather than one that varies as a matter of degree depending on the type of issuer and the type of information—there are good reasons to want to avoid this sort of threshold inquiry.

Langevoort, *Theories*, *supra*, at 898-99. As set forth below, this Court should abandon *Basic*'s insistence

upon a showing of efficiency in favor of a showing that the particular misrepresentation caused a market distortion.

II. IN DETERMINING RELIANCE, COURTS SHOULD LOOK TO MARKET MOVEMENT CAUSED BY AN ALLEGED MISREPRESENTATION, RATHER THAN TO OVERALL MARKET EFFICIENCY

Judicial inquiry into market efficiency, despite its difficulties, might still be worthwhile if it were the most reliable means of establishing whether to apply the fraud on the market presumption. But it is not. Apart from the fact that courts have difficulty making determinations of efficiency, see *supra* at 22-26, ultimately, proving the efficiency of the market as a whole is only an indirect means of proving that the market relied on a particular statement. And as discussed below, determining whether a particular misstatement distorted the market is typically *easier* than demonstrating efficiency of the market as a whole. It is also a more direct means of inquiring into reliance, and a more reliable method of showing whether the complained-of fraud was, in fact, a "fraud on the market."

A. The Event Study Is the Best Available Tool to Examine Market Distortion and Show Reliance

The central issue in determining whether the fraud on the market presumption may be invoked is "whether the challenged disclosure artificially inflated ([or] deflated) the market price of the particular security. Inquiry into whether the market price was inflated ([or] deflated) replaces

individualized inquiry into the extent to which particular investors were aware of a challenged disclosure." Fischel, *Efficient Capital Markets*, *supra*, at 908. But even without relying on the general efficiency of markets, there remains a reliable and practicable method for courts to determine whether misstatements distorted the market: the event study.

"An event study is a regression analysis that measures the effect of an event, such as a firm's earnings announcement, on a firm's stock price." Allen Ferrell & Atanu Saha, *The Loss Causation Requirement for Rule 10b-5 Causes of Action: The Implications of* Dura Pharmaceuticals, Inc. v. Broudo, 63 Bus. Law. 163, 166 (2007). "[A]n event study [can] determine whether the alleged misrepresentations caused any statistically significant stock price movements when made or when a supposedly corrective disclosure was made, controlling for other possible causes of stock price movements (such as movements of the overall market) and random fluctuations." Daniel R. Fischel, *Market Evidence in Corporate Law*, 69 U. Chi. L. Rev. 94, 948 (2002). They "are commonly used to isolate the effects on the stock price of the disclosure of the withheld information." Janet Cooper Alexander, *The Value of Bad News in Securities Class Actions*, 41 UCLA L. Rev. 1421, 1433 (1994). Thus,

> [i]f an event study shows that a misrepresentation or a corrective disclosure had a statistically significant effect on the price of a stock, then the market may be said to have 'relied' on the misrepresentation. And, by the fraud-on-the-market theory, all of the investors who bought (or sold) the stock also 'relied' by buying or selling at

> a market price that included a component reflecting the falsity.

Fisher, *supra*, at 874. Conversely, if an event study shows that a misrepresentation or corrective disclosure[13] had no statistically significant effect on the stock price, then the market cannot be said to have relied on the misrepresentation.

The event study is the "gold standard" technique, for determining whether the market for a security relied on a misstatement. Madge S. Thorsen et al., *Rediscovering the Economics of Loss Causation*, 6 J. Bus. & Sec. L. 93, 109 (2006). It is accepted by courts, academics, the SEC, and even petitioner's own amici for that purpose. See *In re N. Telecom Ltd.*, 116 F. Supp. 2d 446, 460 (S.D.N.Y. 2000); *In re Oracle Sec. Litig.*, 829 F. Supp. 1176, 1181 (N.D. Cal. 1993); Mark L. Mitchell & Jeffry M. Netter, *The Role of Financial Economics in Securities Fraud Cases: Applications at the Securities and Exchange Commission*, 49 Bus. Law. 545, 572-84 (1994) (describing SEC enforcement actions using event study analysis); Financial Economists' Amicus Br. 17-

---

[13] When the fraud at issue involves an alleged omission or a misstatement to meet expectations (and accordingly has no affect on stock price), plaintiffs can use an event study to discern the market effect of the corrective disclosure. See David Tabak, *Loss Causation and Damages in Shareholder Class Actions: When It Takes Two Steps to Tango* 6 (May 27, 2004) (unpublished manuscript), *available at* http://www.nera.com/extImage/200405Tabak_Loss_Causation.pdf. However, amici do not contend that the presumption of reliance in cases of pure omissions created by *Affiliated Ute Citizens* v. *United States*, 406 U.S. 128 (1972), should be disturbed.

20 (recommending use of event studies as superior to a *Cammer*-type analysis to determine efficiency).[14]

Event studies are routinely employed to show that a market is efficient at the class-certification stage. See, *e.g.*, *Teamsters*, 546 F.3d at 207-10; *In re Xcelera.com Sec. Litig.*, 430 F.3d 503, 512-14 (1st Cir. 2005); *In re Nature's Sunshine Prods. Inc. Sec. Litig.*, 251 F.R.D. 656, 664-65 (D. Utah 2008). Such studies examine the market effect of various news items relating to an issuer; if the security "change[s] rapidly, and in the expected direction, in response to new information," it supports a finding of market efficiency. *Schleicher*, 618 F.3d at 684; *Teamsters*, 546 F.3d at 207-08 ("Evidence that unexpected corporate events or financial releases cause an immediate response in the price of a security has been considered 'the most important [] *Cammer* factor.'" (quoting *Xcelera.com*, 430 F.3d at 512)).

Thus, courts are already requesting, and plaintiffs are already providing, experts' event studies examining the effect of disclosures at the class-certification stage to prove that a market generally incorporates information into prices, to trigger the *Basic* presumption of reliance. But the same experts could conduct the same analyses to determine

---

[14] See, *e.g.*, *In re Flag Telecom Holdings, Ltd. Sec. Litig.*, 245 F.R.D. 147, 170 (S.D.N.Y. 2007), *rev'd on other grounds*, 574 F.3d 29 (2d Cir. 2009) (finding "numerous courts have held that an event study is a reliable method for determining market efficiency"); Fischel, *Market Evidence*, *supra*, at 948 (describing an event study as a "simple statistical technique, used in thousands of academic studies and employed routinely in securities fraud litigation brought under the federal securities laws").

directly whether the alleged misstatement was incorporated into the stock price—the added step of determining efficiency as a general matter is unnecessary. Event studies can examine market effects of particular affirmative misstatements by looking to the effect at the time of disclosure; in cases such as this, or in cases involving omissions, they can look to the date the information was corrected. See David Tabak, *Making Assessments about Materiality Less Subjective Through the Use of Content Analysis* 4-5 (Mar. 13, 2007) (unpublished manuscript), *available at* http://www.nera.com/extImage/PUB_Tabak_Content_Analysis_SEC1646-FINAL.pdf.

Amici professors submit that a direct analysis of the market impact of a specific alleged misstatement, rather than examination of general market efficiency, is a more straightforward and reliable test for whether the fraud on the market theory should be invoked. Such an approach conforms *Basic* to current finance theory and research, and by limiting the over- and underinclusiveness of the current approach, offers a better balance between allowing meritorious class actions and preventing baseless ones at the outset.

Petitioner's law professor amici contend that, in cases involving multiple simultaneous disclosures as are at issue here, it is difficult to disentangle multiple disclosures using an event study. See Br. for Law Professors as Amici Curiae Supporting Petitioner 28-29. But while it may be more difficult in such instances to show price distortion as a result of a particular misstatement, there is no reason to think it is beyond the capability of event studies. See Frederick C. Dunbar & Arun Sen, *Counterfactual*

Keys to Causation and Damages in Shareholder Class Action Lawsuits, 2009 Wis. L. Rev. 199, 227-41 (2009) (noting that content analysis can separate and clarify the impact of multiple simultaneous events); Ferrell & Saha, *supra*, at 170 (explaining the use of shorter event windows to avoid confounding events); David I. Tabak & Frederick C. Dunbar, *Materiality and Magnitude: Event Studies in the Courtroom*, *in* Litigation Services Handbook 19.2 (Roman L. Weil et al. eds., 2001) (noting that economists can disentangle the effects of multiple announcements on a single day if the effect of nonfraudulent announcements on that day can be estimated, perhaps through analogs on other days). Indeed, petitioner's expert in this case did not state that an event study disaggregating the effect of simultaneous disclosures would have been difficult (much less impossible), but only that plaintiffs never asked her to undertake one. See *Archdiocese of Milwaukee Supporting Fund, Inc.* v. *Halliburton Co.*, 597 F.3d 330, 342 (5th Cir. 2010). Any claim that event studies of simultaneous information disclosures are too difficult to undertake would ring hollow in light of the fact that such studies would be important for proving loss causation or materiality on the merits.

Petitioner's amici law professors and financial economists also suggest that requiring event studies at the class-certification stage is inappropriate because they may require evidence obtainable only through discovery. See Br. for Law Professors as Amici Curiae Supporting Petitioner 28-29; Financial Economists' Amicus Br. 31-33. But these amici together identify only one purported example of information useful for conducting an event study that would be obtainable only through discovery—the

identity of competing or peer firms. Br. for Law Professors as Amici Curiae Supporting Petitioner 28-29 (citing Jonathan Klick & Robert H. Sitkoff, *Agency Costs, Charitable Trusts, and Corporate Control: Evidence from Hershey's Kiss-Off*, 108 Colum. L. Rev. 749, 806-14 (2008), to illustrate the use of competitor information in an event study). That argument misses the mark. The very research Petitioner's amici professors cite as illustrative used publicly available data to determine relevant competitors. See Klick & Sitkoff, *supra*, at nn.250-51 and accompanying text ("We took our roster of Hershey's chocolate rivals from Google Finance * * * and Yahoo! Finance."). And because event studies examine *publicly* disseminated information and its effect on *public* markets, the role of undisclosed *private* information is negligible. Petitioner's amici professors cite no compelling examples of circumstances in which plaintiffs would require nonpublic information to complete an event study, and their own scholarship suggests it would be difficult to identify one. See Merritt B. Fox, *After* Dura*: Causation in Fraud-on-the-Market Actions*, 31 J. Corp. L. 829, 869 (2006) ("Evidence concerning the market acceptance of the misstatement as true should be available to plaintiffs without discovery and so requiring specific allegations with respect to this matter would not necessarily be very burdensome.").

Petitioner's amici law professors further claim that even if discovery would not lead to evidence essential to an event study, it could unearth other evidence, such as proof that a defendant manipulated the timing of disclosures to conceal the effect of a misstatement. See Br. for Law Professors as Amici

Curiae Supporting Petitioner 28-29. This argument is unavailing. Such evidence would show only that a company may have intended to obscure price distortion, not that price distortion actually occurred. To the extent such manipulation frustrates the operation of the securities laws, the solution is not to excuse plaintiffs from their evidentiary burdens.

B. Because the Proposed Class Has the Burden of Persuasion on Class Certification under Rule 23, It Should Have to Show That the Alleged Misrepresentation Caused Market Distortion at the Class-Certification Stage

"In addition to satisfying Rule 23(a)'s prerequisites, parties seeking class certification must show that the action is maintainable under Rule 23(b)(1), (2), or (3)." *Amchem Prods., Inc.* v. *Windsor*, 521 U.S. 591, 614 (1997). Thus, when plaintiffs wish to file a class action under Rule 23(b)(3), it is their burden to show that common questions "predominate over any questions affecting only individual members." Fed. R. Civ. P. 23(b)(3). In the context of Rule 10b-5 class actions, it follows that it is plaintiffs' burden to show that common questions of reliance predominate over reliance questions affecting individual class members. Demonstrating applicability of the fraud on the market presumption is therefore plaintiffs' burden. See *In re Salomon Analyst Metromedia Litig.*, 544 F.3d 474, 485 (2d Cir. 2008) (discussing whether "plaintiffs had met their burden for invoking the fraud-on-the-market presumption"). This showing must be made before certification. See *Szabo* v. *Bridgeport Machs., Inc.*, 249 F.3d 672, 676 (7th Cir. 2001). Therefore, just as plaintiffs are required to demonstrate market

"efficiency" at the class-certification stage, see, *e.g.*, *Gariety* v. *Grant Thornton, LLP*, 368 F.3d 356, 368 (4th Cir. 2004), so should they be required to show market distortion to invoke the fraud on the market presumption.

Amici do not suggest that plaintiffs be subjected to a "preliminary inquiry into the merits of a suit." *Eisen* v. *Carlisle & Jacquelin*, 417 U.S. 156, 177 (1974). Rather, because the fraud on the market presumption must be invoked at the class-certification stage, it is "necessary for the court to probe behind the pleadings before coming to rest on the certification question." *Gen. Tel. Co. of the Sw.* v. *Falcon*, 457 U.S. 147, 160 (1982); see also *Coopers & Lybrand* v. *Livesay*, 437 U.S. 463, 469 (1978) ("[T]he class determination generally involves considerations that are enmeshed in the factual and legal issues comprising the plaintiff's cause of action.") (internal quotation marks omitted). As the Second Circuit has observed, *Eisen* is "properly understood to preclude consideration of the merits only when a merits issue is unrelated to a Rule 23 requirement." *In re Initial Public Offerings Sec. Litig.*, 471 F.3d 24, 41 (2d Cir. 2006). Accordingly, "there is no reason to lessen a district court's obligation to make a determination that every Rule 23 requirement is met before certifying a class just because of some or even full overlap of that requirement with a merits issue." *Id.*; accord *Love* v. *Turlington*, 733 F.2d 1562, 1564 (11th Cir. 1984) ("While it is true that a trial court may not properly reach the merits of a claim when determining whether class certification is warranted, this principle should not be talismanically invoked to artificially limit a trial court's examination of the factors necessary to a reasoned determination of

whether a plaintiff has met her burden of establishing each of the Rule 23 class action requirements."). Such is the case here.

CONCLUSION

The judgment of the court of appeals should be affirmed.

Respectfully submitted.

I. INTEREST OF *AMICUS CURIAE*

The National Association of Shareholder and Consumer Attorneys ("NASCAT") is a nonprofit membership organization founded in 1988. NASCAT's member law firms represent both institutional and individual investors in securities fraud and shareholder derivative cases throughout the United States. NASCAT and its members are committed to representing victims of corporate abuse, fraud and white collar criminal activity in cases with the potential to advance the state of the law, educate the public, modify corporate behavior and improve access to justice and compensation for those who have suffered injury at the hands of corporate wrongdoers. NASCAT advocates the principled interpretation and application of the federal securities laws – including the Securities Exchange Act of 1934, 15 U.S.C. § 78a *et seq.* ("Exchange Act") – to protect investors from manipulative, deceptive and fraudulent practices and to ensure this nation's capital markets operate fairly and efficiently.[1]

Comprised of attorneys whose practice focuses in substantial part on the application of the federal

---

[1] In accordance with Supreme Court Rule 37.3(a), counsel for NASCAT represent that all parties in this case have filed letters with the Clerk giving blanket consent to the filing of *amicus curiae* briefs. Additionally, pursuant to Rule 37.6 of this Court, counsel for NASCAT represent that no counsel for a party authored this brief in whole or in part and no one other than NASCAT, its members or its counsel made a monetary contribution to the preparation or submission of this brief.

securities laws, NASCAT has a deeply-rooted interest in the central issue this case presents: whether securities class plaintiffs attempting to invoke a classwide presumption of reliance premised on the fraud-on-the-market doctrine must, in addition to showing the market in which the subject security traded was "efficient" during the relevant period, demonstrate loss causation at the class certification stage, as the Fifth Circuit Court of Appeals demands. NASCAT agrees with Petitioner's arguments against adoption of the Fifth Circuit's misguided and doctrinally unsound standard. NASCAT writes separately to inform this Court of the serious burden plaintiffs already face, even without the errant loss causation requirement the Fifth Circuit has created, to trigger the fraud-on-the-market presumption at the class certification stage. Additionally, this brief emphasizes the important distinction between reliance – which, in class cases arising under Section 10(b) of the Exchange Act, 15 U.S.C. § 78j(b), is necessarily entwined with the fraud-on-the-market presumption – and loss causation, which is not.

II. SUMMARY OF ARGUMENT

For class plaintiffs asserting claims under Section 10(b) of the Exchange Act and Rule 10b-5, 17 C.F.R. § 240.10b-5, promulgated thereunder by the Securities and Exchange Commission ("SEC"), satisfying the predominance requirement of Rule 23 of the Federal Rules of Civil Procedure would prove a

virtually insurmountable hurdle without the class-wide presumption of reliance afforded by the fraud-on-the-market doctrine, which this Court endorsed in *Basic Inc. v. Levinson*, 485 U.S. 224 (1988). Commensurate with the evidentiary benefit the presumption provides, investors bear the burden of demonstrating the availability of the presumption for class certification purposes. To do so, they must show the security at issue traded in an "efficient" market. The purpose of the market efficiency inquiry is to assess whether the market for the subject security possesses characteristics rendering it logical and reasonable to presume that defendants' material misrepresentations were disseminated to investors through the price of the security and that investors, in relying on the integrity of the market price to purchase or sell the security, inherently relied on the misrepresentations.

Establishing market efficiency requires a fact-intensive analysis of some or all of the following well-accepted factors: (1) average weekly trading volume of the stock during the proposed class period; (2) number of securities analysts following and reporting on the stock during the proposed class period; (3) the existence of "market makers" and arbitrageurs, who react quickly to company-specific disclosures and drive the stock price accordingly; (4) whether the company was eligible to file a Form S-3 short-form securities registration statement, generally limited to corporations whose stock is actively traded and widely followed; (5) a causal relationship between new or unexpected company-related disclosures and a reaction of the price of the company's stock; (6) the company's market capitalization; (7) the "bid-ask

spread," or the difference between the price investors are willing to pay for the stock and the price at which current shareholders are willing to sell their shares; and (8) the company's "float," or the percentage of shares not owned by company insiders.

Given the complexity involved in evaluating market efficiency, parties attempting to establish or refute its existence with respect to a particular security often proffer expert analysis – in the form of reports or affidavits – regarding the efficiency factors. Indeed, parties commonly rely on expert "event studies" assessing the causal relationship (or lack thereof) between new or unexpected company-related disclosures and reaction of the stock price – which comprises the keystone of the market efficiency analysis. Plaintiffs thus face a serious task and meaningful burden to justify the availability of the presumption of reliance.[2]

In light of the nature and function of the market efficiency inquiry, the Fifth Circuit's requirement that, to trigger the fraud-on-the-market presumption, plaintiffs must make a factual showing sufficient to demonstrate loss causation is improper. The Fifth Circuit's approach contravenes this Court's jurisprudence regarding reliance and loss causation and imposes an unduly restrictive standard for plaintiffs to establish predominance under Rule 23. This Court

---

[2] While this brief generally refers to "stock," the use of that term is not intended to suggest the market efficiency analysis does not, or cannot, apply to other securities.

therefore should reject the Fifth Circuit's draconian standard and reverse that court's decision overturning class certification in the case at bar.

III. ARGUMENT

A. This Court Has Endorsed A Rebuttable Presumption Of Reliance Premised On The Fraud-On-The-Market Doctrine, Which Allows Securities Class Plaintiffs To Meet The Predominance Requirement Of Rule 23.

In *Basic*, this Court endorsed the fraud-on-the-market doctrine as a mechanism for securities class plaintiffs to establish a rebuttable presumption of reliance for Section 10(b) claims. Drawing on, *inter alia*, its prior jurisprudence regarding reliance in the securities context as well as considerations of policy and fairness, the Court upheld the lower courts' application of the presumption of reliance in that case, declaring: "An investor who buys or sells stock at the price set by the market does so in reliance on the integrity of that price. Because most publicly available information is reflected in market price, an investor's reliance on any public material misrepresentations, therefore, may be presumed for purposes of a *Rule 10b-5* action." 485 U.S. at 247.[3]

---

[3] The Court has since reaffirmed its recognition of a rebuttable presumption of reliance based on the fraud-on-the-market

(Continued on following page)

Plaintiffs in *Basic* alleged defendants' material misrepresentations in failing to properly apprise investors of a proposed merger transaction had created a "depressed" market for Basic stock and plaintiffs sold their shares in reliance on those misrepresentations. 485 U.S. at 228, 242. In granting class certification, the district court applied the fraud-on-the-market presumption of reliance, concluding "that with reference to each public statement and its impact upon the open market for Basic shares, common questions predominated over individual questions." *Id.* at 242. The Sixth Circuit, *inter alia*, affirmed the district court's order granting class certification. The Court of Appeals observed that the fraud-on-the-market theory "is based on two assumptions: first, that in an efficient market the price of a stock will reflect all information available to the public; and, second, that an individual relies on the integrity of the market price when dealing in that stock." *Levinson v. Basic Inc.*, 786 F.2d 741, 750 (6th Cir. 1986) (citation omitted), *vacated on other grounds*, 485 U.S. 224 (1988). The court concluded, "Here, the defendants made public, material misrepresentations and the plaintiffs sold Basic stock in an impersonal, efficient market. Thus the class . . . has established the threshold facts for proving their loss." *Id.* at 751.

---

doctrine. *See Stoneridge Inv. Partners, LLC v. Scientific-Atlanta, Inc.*, 552 U.S. 148, 159 (2008).

On certiorari, this Court echoed the pronouncements of lower courts that had adopted the fraud-on-the-market presumption. The Court stated, "Requiring proof of individualized reliance from each member of the proposed plaintiff class effectively would have prevented [the named plaintiffs] from proceeding with a class action, since individual issues then would have overwhelmed the common ones." *Basic*, 485 U.S. at 242; *accord Peil v. Speiser*, 806 F.2d 1154, 1160 (3d Cir. 1986) ("many courts have come to realize that, in certain situations, the requirement of showing direct reliance 'imposes an unreasonable and irrelevant evidentiary burden'") (quoting *Blackie v. Barrack*, 524 F.2d 891, 907 (9th Cir. 1975)). This Court further reasoned "our understanding of *Rule 10b-5*'s reliance requirement must encompass" the differences between "modern securities markets, literally involving millions of shares changing hands daily," and "the face-to-face transactions" early fraud cases contemplated. *Basic*, 485 U.S. at 243-44.

The Court observed that the fraud-on-the-market doctrine "is based on the hypothesis that, in an open and developed securities market, the price of a company's stock is determined by the available material information regarding the company and its business"; misleading statements therefore will "defraud purchasers of stock even if the purchasers do not directly rely on the misstatements." *Id.* at 241-42 (citation and internal quotation marks omitted). The Court further explained:

> In face-to-face transactions, the inquiry into an investor's reliance upon information is into the subjective pricing of that information by that investor. With the presence of a market, the market is interposed between seller and buyer and, ideally, transmits information to the investor in the processed form of a market price. Thus the market is performing a substantial part of the valuation process performed by the investor in a face-to-face transaction. The market is acting as the unpaid agent of the investor, informing him that given all the information available to it, the value of the stock is worth the market price.

Id. at 244 (citation and internal quotation marks omitted). This Court therefore determined a presumption was warranted given the realities of open-market securities transactions, as requiring a plaintiff "to show . . . how he would have acted if omitted material information had been disclosed" or "if the misrepresentation had not been made" would "place an unnecessarily unrealistic evidentiary burden on the *Rule 10b-5* plaintiff who has traded on an impersonal market." *Id.* at 245.

The Court also found the presumption "is consistent with, and, by facilitating *Rule 10b-5* litigation, supports, the congressional policy embodied in the 1934 [Exchange] Act," as Congress had "expressly relied on the premise that securities markets are affected by information, and enacted legislation to facilitate an investor's reliance on the integrity of

those markets." *Id.* at 245-46. Furthermore, observing that empirical studies "have tended to confirm Congress'[s] premise that the market price of shares traded on well-developed markets reflects all publicly available information, and, hence, any material misrepresentations," the Court noted the general acceptance of the fraud-on-the-market theory by courts considering it as well as by commentators. *Id.* at 246-47.

Based on its acceptance (for securities law purposes) of the general economic principles underlying the fraud-on-the-market doctrine and the policy considerations favoring a presumption of reliance, this Court endorsed the application of the presumption where the market for a security is "impersonal" and "well-developed" and the security price reflects "most publicly available information." *Id.* at 247. In other words, to trigger the fraud-on-the-market presumption of reliance, investors must demonstrate the market for the subject security was "efficient" during the period relevant to the litigation.

B. Availability Of The *Basic* Presumption Turns On Whether The Security At Issue Traded In An "Efficient" Market.

Courts generally regard a showing of market efficiency – *i.e.*, that the security at issue traded in an "efficient" market – as the central factor in deeming the presumption of reliance available to plaintiffs at class certification. *See, e.g.*, *Schleicher v. Wendt*, 618

F.3d 679, 688 (7th Cir. 2010) (Easterbrook, C.J.) ("The district court assured itself that the market for Conseco's stock was thick enough to transmit defendants' statements to investors by way of the price. That finding supports use of the fraud-on-the-market doctrine as a replacement for individual reading and reliance on defendants' statements."); *In re Mills Corp. Sec. Litig.*, 257 F.R.D. 101, 106 (E.D. Va. 2009) ("[T]o be entitled to the presumption, Plaintiffs need only demonstrate that the company's shares traded in an efficient market."); *Cheney v. CyberGuard Corp.*, 213 F.R.D. 484, 496-502 (S.D. Fla. 2003) (finding predominance under Rule 23(b)(3) via application of fraud-on-the-market doctrine, "since the evidence support[ed] the position that CyberGuard stock was traded in an efficient market"). Only where market efficiency exists "may a court presume reliance and avoid individualized inquiries." *Gariety v. Grant Thornton, LLP*, 368 F.3d 356, 368 (4th Cir. 2004); *see also Schleicher*, 618 F.3d at 684; *In re Xcelera.com Sec. Litig.*, 430 F.3d 503, 507 (1st Cir. 2005); *Hayes v. Gross*, 982 F.2d 104, 107 (3d Cir. 1992); *Freeman v. Laventhol & Horwath*, 915 F.2d 193, 198 (6th Cir. 1990).

This Court in *Basic* did not define an "efficient" market – beyond indicating it is "impersonal" and "well-developed" (or "open and developed")[4] – nor did

---

[4] 485 U.S. at 241, 246-47 (citation and internal quotation marks omitted).

the Court endorse any particular method of determining market efficiency. *See* 485 U.S. at 246 n.24 ("We need not determine by adjudication what economists and social scientists have debated through the use of sophisticated statistical analysis and the application of economic theory. For purposes of accepting the presumption of reliance in this case, we need only believe that market professionals generally consider most publicly announced material statements about companies, thereby affecting stock market prices."); *id.* at 248 n.28 ("By accepting this rebuttable presumption, we do not intend conclusively to adopt any particular theory of how quickly and completely publicly available information is reflected in market price.").[5] Federal appellate courts, however, have expounded on the efficient market concept and its application in securities cases.

The First Circuit has observed that the efficient market hypothesis began as "an academic attempt" to determine whether "an ordinary investor" can "beat

---

[5] An "open" market "is one in which anyone, or at least a large number of persons, can buy or sell." *Freeman*, 915 F.2d at 198 (citation and internal quotation marks omitted). A "developed" market "is one which has a relatively high level of activity and frequency, and for which trading information (e.g., price and volume) is widely available." *Id.* (citation and internal quotation marks omitted). A developed market is "principally a secondary market in outstanding securities" and "usually, but not necessarily, has continuity and liquidity (the ability to absorb a reasonable amount of trading with relatively small price changes)." *Id.* at 198-99 (citation and internal quotation marks omitted).

the stock market," *i.e.*, "can such an investor make trading profits on the basis of new information?" *In re PolyMedica Corp. Sec. Litig.*, 432 F.3d 1, 8 (1st Cir. 2005). Where a market is efficient, "the answer is 'no,' because the information that would have given the investor a competitive edge and allowed the investor to 'beat' the market is already reflected in the market price." *Id.* Consequently, there is "no 'bargain' from which an investor can benefit." *Id.*; *see also* Burton G. Malkiel, *The Efficient Market Hypothesis and Its Critics*, 17 J. ECON. PERSP. 59, 60 (2003) (defining "efficient financial markets" to mean "such markets do not allow investors to earn above-average returns without accepting above-average risks").

Echoing other courts and commentators, the First Circuit further explained that the concept of market efficiency contemplates three "competing" versions: "weak, semi-strong, and strong," each of which "makes a progressively stronger claim about the kind of information that is reflected in stock price." *PolyMedica*, 432 F.3d at 10 n.16. The weak form holds "an efficient market is one in which historical price data is reflected in the current price of the stock, such that an ordinary investor cannot profit by trading stock based on the historical movements in stock price." *Id.* The semi-strong form conceives an efficient market as "one in which all publicly available information is reflected in the market price of the stock, such that an investor's efforts to acquire and analyze public information (about the company, the industry, or the economy, for instance) will not

produce superior investment results." *Id.* The strong form views an efficient market as "one in which stock price reflects not just historical price data or all publicly available information, but all possible information – both public and private." *Id.*

Lower courts have observed that the fraud-on-the-market doctrine endorsed in *Basic* rests on the semi-strong form, which comprises the "prevailing definition of market efficiency." *Id.* Under the semi-strong market efficiency standard, in an efficient market, "the market price has integrity[;] . . . it adjusts rapidly to reflect all new information." *Gariety*, 368 F.3d at 367 (alteration and ellipsis in original) (citation and internal quotation marks omitted); *see also Eckstein v. Balcor Film Investors*, 8 F.3d 1121, 1129-30 (7th Cir. 1993) (Easterbrook, J.) ("We call a market 'efficient' because the price reflects a consensus about the value of the security being traded – not necessarily because the price captures the true value of the firm's assets but because the price is the best available device to assess the significance of additional bits of information.").

To trigger the *Basic* presumption of reliance, then, plaintiffs must demonstrate that the market price of the security at issue reflects publicly available information – in other words, the market for the security possesses "'informational efficiency.'" *PolyMedica*, 432 F.3d at 19; *see also Schleicher*, 618 F.3d at 682 ("*Basic* concluded that the price of a well-followed and frequently traded stock reflects the public information available about a company"); *Freeman*, 915

F.2d at 197 ("The fraud on the market theory rests on the assumption that the price of an actively traded security in an open, well-developed, and efficient market reflects all the available information about the value of a company."). Moreover, in an informationally efficient market, the price of a security "rapidly reflects ***new*** information in price." *Freeman*, 915 F.2d at 199 (emphasis added) (citation and internal quotation marks omitted); *see also In re Nature's Sunshine Prods. Inc. Sec. Litig.*, 251 F.R.D. 656, 661 (D. Utah 2008) (the fraud-on-the-market theory "assumes that in an efficient market, all the available information about the company is quickly reflected in the price at which people are willing to buy and sell the stock"); *In re DVI Inc. Sec. Litig.*, 249 F.R.D. 196, 210 (E.D. Pa. 2008) ("In considering the efficiency of the market for a security, courts often focus on whether the security's price reacted quickly to significant corporate events and disclosures.").

Notably, the viability of the fraud-on-the-market doctrine does not turn on "perfect" efficiency, an unrealistic notion. Rather, the core principle underlying the efficient market hypothesis – that the market price of a security reflects available public information and therefore possesses "integrity" – reasonably allows for a presumption of reliance regardless of market imperfections because whatever anomalies exist in the market are insignificant and do not allow market participants to exploit them effectively. *See* Malkiel, *Efficient Market Hypothesis*, 17 J. ECON. PERSP. at 72 ("Any truly repetitive and exploitable pattern that can be discovered in the stock market

and can be arbitraged away will self-destruct."); *Eckstein*, 8 F.3d at 1129 ("The price in an open and developed market ***usually*** reflects all available information, because the price is an outcome of competition among knowledgeable investors.") (emphasis added); *Peil*, 806 F.2d at 1161 n.10 ("The 'fraud on the market' theory rests on the assumption that there is a ***nearly*** perfect market in information, and that the market price of stock reacts to and reflects the available information.") (emphasis added); *In re Res. Am. Sec. Litig.*, 202 F.R.D. 177, 190 (E.D. Pa. 2001) ("Commentators have noted that an efficient market cannot be perfectly efficient.") (citing Richard A. Booth, *The Efficient Market, Portfolio Theory, and the Downward Sloping Demand Hypothesis*, 68 N.Y.U. L. REV. 1187, 1195 (1993)). Moreover, that "[i]t takes some amount of time for new information to get incorporated into the price of a security" does not render a market inefficient. *Res. Am.*, 202 F.R.D. at 190.

Similarly, consistent with courts' acceptance of the "informational efficiency" approach to defining whether a market is efficient, plaintiffs need not make a more demanding showing that the market for the security at issue embodies "'fundamental value efficiency.'" *PolyMedica*, 432 F.3d at 19 (rejecting fundamental value approach). The latter standard would require that the market "respond to information not only quickly but accurately, such that the market price of a stock reflects its fundamental value." *Id.*; *accord In re Accredo Health, Inc., Sec.*

Litig., No. 03-2216 DP, 2006 U.S. Dist. LEXIS 97621, at *30-31 (W.D. Tenn. Mar. 7, 2006) ("the few cases that have addressed this issue have squarely rejected this fundamental value approach") (citing cases); *In re VeriFone Sec. Litig.*, 784 F. Supp. 1471, 1479 n.7 (N.D. Cal. 1992), *aff'd*, 11 F.3d 865 (9th Cir. 1993).

As further detailed below, plaintiffs attempting to utilize the fraud-on-the-market presumption – thereby alleviating the burden of demonstrating actual reliance by each class member – must undertake the concomitantly serious task of establishing the efficiency of the relevant market at the class certification stage. The prevailing standard for assessing market efficiency imposes a meaningful burden for plaintiffs to carry.

C. Courts Assessing Market Efficiency At The Class Certification Stage Engage In A Fact-Intensive Analysis.

Resolution of the question of market efficiency – the analytical engine powering the fraud-on-the-market vehicle – is often the key determinant to class certification in a securities fraud case. Given the significance of the fraud-on-the-market presumption to plaintiffs' ability ultimately to establish reliance at trial, "courts at the class certification stage probe the factual basis of the . . . presumption to make sure it will be a viable form of proof in a given case." *In re New Motor Vehicles Canadian Exp. Antitrust*

Litig., 522 F.3d 6, 25 (1st Cir. 2008). Plaintiffs bear the burden at the class certification stage of demonstrating the existence of market efficiency, and the court does not "simply presume[ ] the facts in favor of an efficient market based on bare allegations raised in the plaintiff's complaint." *Xcelera.com*, 430 F.3d at 512 (citation and internal quotation marks omitted).

Market efficiency "is a complex issue that requires an analysis of numerous factors." *Lehocky v. Tidel Techs., Inc.*, 220 F.R.D. 491, 505 (S.D. Tex. 2004). While expert analysis is not expressly required to demonstrate (or refute) market efficiency, it has become a regular part of the inquiry. *See In re Countrywide Fin. Corp. Sec. Litig.*, Lead Case No. CV-07-05295-MRP (MANx), 2009 U.S. Dist. LEXIS 129807, at *85 n.75 (C.D. Cal. Dec. 9, 2009) ("There is no requirement for expert testimony on the issue of market efficiency, but many courts have considered it when addressing [the *Basic* presumption], which may often benefit from statistical, economic, and mathematical analysis.") (alteration in original) (citation and internal quotation marks omitted); *Lehocky*, 220 F.R.D. at 505 ("Federal courts typically look to expert testimony to decide th[e] [market efficiency] issue."). Plaintiffs typically offer expert reports or affidavits to support the existence of market efficiency, with defendants often putting forth opposing experts. *See, e.g.*, *PolyMedica*, 432 F.3d at 5-6 (where district court "went well beyond the four corners of the pleadings,

considering both parties' expert reports and literally hundreds of pages of exhibits focused on market efficiency," First Circuit held district court "was entitled to look beyond the pleadings in its evaluation of the applicability of the fraud-on-the-market presumption of reliance, and its resolution of the class-certification question"); *In re HealthSouth Corp. Sec. Litig.*, 257 F.R.D. 260, 272, 276 (N.D. Ala. 2009) (observing at class certification stage that while the court "did not accept the Defendants' suggestion that it hold an evidentiary hearing," the court "did consider hundreds if not thousands of pages of expert reports, affidavits, and exhibits, as well as extensive briefs" and "the focus of much of the written and oral debate centered on" whether fraud-on-the-market presumption applied).

Courts have avoided adopting a canonical set of factors as indicative of market efficiency (or a lack thereof), instead recognizing the determination demands "a fact-dominated inquiry." *PolyMedica*, 432 F.3d at 5. However, Courts of Appeals and district courts generally look to the criteria utilized in *Cammer v. Bloom*, 711 F. Supp. 1264 (D.N.J. 1989), for guidance. *See, e.g.*, *Miller v. Thane Int'l, Inc.*, 615 F.3d 1095, 1103 (9th Cir. 2010) ("*Cammer* sets out five well-recognized factors designed to help make the central determination of efficiency in a particular market.") (citation and internal quotation marks omitted); *Teamsters Local 445 Freight Div. Pension Fund v. Bombardier Inc.*, 546 F.3d 196, 204 n.11 (2d Cir. 2008) (observing that the *Cammer* factors "have been routinely applied by district courts considering

the efficiency of equity markets"); *Xcelera.com*, 430 F.3d at 508 (in affirming grant of class certification, First Circuit approved of district court's reliance on *Cammer*, "which tracks the definition [of market efficiency] we adopted in *PolyMedica*"); *Gariety*, 368 F.3d at 368 (citing *Cammer* factors); *Hayes*, 982 F.2d at 107 n.1 (noting *Cammer*'s "thorough analysis").

In *Cammer*, the district court set forth criteria for judging whether the defendant company "traded in an efficient market." 711 F. Supp. at 1285-86. As an initial matter, the court reasoned "[i]t would be illogical to apply a presumption of reliance merely because a security is traded within a certain 'whole market', without considering the trading characteristics of the individual stock itself." *Id.* at 1281. The court stated that while the location where a stock trades – *e.g.*, on an over-the-counter-market or a national exchange – "might be relevant," it "is not dispositive of whether the current price reflects all available information." *Id.* at 1281 (internal quotation marks omitted). The court noted, however, "certain underlying characteristics" of an efficient market "more often than not will be associated with companies listed on national exchanges." *Id.* at 1281 n.26.

The court detailed five factors that might indicate market efficiency:

First, the court cited "an average weekly trading volume during the class period in excess of a certain number of shares," explaining "an actively traded market, as evidenced by a large weekly volume of stock trades, . . . implies significant investor interest

in the company," which in turn "implies a likelihood that many investors are executing trades on the basis of newly available or disseminated corporate information." *Id.* at 1286. In that regard, "[t]urnover measured by average weekly trading of 2% or more of the outstanding shares would justify a strong presumption that the market for the security is an efficient one; 1% would justify a substantial presumption." *Id.* at 1293 (quoting 4 ALAN R. BROMBERG & LEWIS D. LOWENFELS, BROMBERG AND LOWENFELS ON SECURITIES FRAUD AND COMMODITIES FRAUD § 8.6 (1988)).

Second, the existence of "a significant number of securities analysts" following and reporting on a company's stock during the class period "would imply, for example, the [reports the company issued] were closely reviewed by investment professionals, who would in turn make buy/sell recommendations to client investors." *Id.* at 1286. In that way, "the market price of the stock would be bid up or down to reflect the financial information contained in the . . . reports, as interpreted by the securities analysts." *Id.*

Third, "[t]he existence of market makers and arbitrageurs would ensure completion of the market mechanism," as those individuals "would react swiftly to company news and reported financial results by buying or selling stock and driving it to a changed price level." *Id.* at 1286-87;[6] *see also PolyMedica*, 432

---

[6] Arbitrage is "[t]he simultaneous buying and selling of identical securities in different markets, with the hope of profiting from the price difference in those markets." BLACK'S

(Continued on following page)

F.3d at 9. ("The capacity of arbitrageurs to seek out new information and evaluate its effects on the price of securities distinguishes them from ordinary investors, who lack the time, resources, or expertise to evaluate all the information concerning a security. . . . In an efficient market, then, an ordinary investor who becomes aware of publicly available information cannot make money by trading on it because the information will have already been incorporated into the market by arbitrageurs.") (citations and internal quotation marks omitted).

Fourth, "it would be helpful" if the company whose stock is at issue "was entitled to file an S-3 Registration Statement in connection with public offerings or, if ineligible, such ineligibility was only because of timing factors rather than because the minimum stock requirements set forth in the instructions to Form S-3 were not met." *Cammer*, 711 F. Supp. at 1287. Form S-3 is a short-form securities registration statement reserved for companies that meet requirements the SEC has established, including timely filing of SEC reports for the 12 calendar months preceding the filing of the S-3 and a market

---

LAW DICTIONARY 112 (8th ed. 2004). A market maker is "[o]ne who helps establish a market for securities by reporting bid-and-asked quotations." *Id.* at 990. It is "typically a specialist permitted to act as a dealer, a dealer acting in the capacity of block positioner, or a dealer who, with respect to a security, routinely enters quotations in an interdealer communication system or otherwise and is willing to buy and sell securities for the dealer's own account." *Id.*

capitalization of at least $75 million. *See* 17 C.F.R. § 239.13. "Generally speaking, it is the largest and most well known companies which register equity securities on Form S-3." *Cammer*, 711 F. Supp. at 1271 n.5; *see also Lehocky*, 220 F.R.D. at 509 ("Only corporations whose stock is actively traded and widely followed are allowed to use Form S-3."). As such, a company's eligibility to file Form S-3 constitutes "an important factor" weighing in favor of finding that the market for the company's stock is efficient. *Cammer*, 711 F. Supp. at 1285.[7]

Fifth, and finally, the court cited "a cause and effect relationship" between "unexpected" corporate events or financial disclosures and a rapid response in the price of the company's stock, as that connection "is the essence of an efficient market and the foundation for the fraud on the market theory." *Cammer*, 711 F. Supp. at 1287; *see also O'Neil v. Appel*, 165 F.R.D. 479, 502-03 (W.D. Mich. 1995) ("If a plaintiff can empirically demonstrate that stock prices regularly rose or fell in prompt response to market information, this fact would be significant in establishing an

---

[7] "Even though the SEC relaxed its requirements for S-3 eligibility after the *Cammer* decision, courts continue to hold that S-3 eligibility is still an important factor in determining market efficiency," as courts have found "the SEC permits an S-3 Registration Statement only on the premise that the stock is already traded on an open and efficient market, such that further disclosure is unnecessary." *Teamsters Local 445 Freight Div. Pension Fund v. Bombardier, Inc.*, No. 05 Civ. 1898 (SAS), 2006 U.S. Dist. LEXIS 52991, at *35 (S.D.N.Y. Aug. 1, 2006) (footnote omitted) (citations and internal quotation marks omitted), *aff'd*, 546 F.3d 196 (2d Cir. 2008).

efficient market."); *Krogman v. Sterritt*, 202 F.R.D. 467, 477 (N.D. Tex. 2001) ("[I]n an efficient market, a stock's price remains relatively stable in the absence of news, and changes very rapidly as the market receives new and unexpected information.").

Notwithstanding its enumeration of those factors, the court in *Cammer* cautioned against drawing "bright line tests," such as "whether a company is listed on a national exchange or is entitled to register securities on SEC Form S-3," to help determine whether the stock at issue "trades in an 'open and efficient market.'" 711 F. Supp. at 1287. The court explained, "A well established and widely followed company may choose for any number of unrelated reasons not to list itself on a national exchange. Furthermore, there may be a company whose stock trades in an efficient market, but which just missed or recently failed to meet the qualifications for Form S-3 registrants." *Id.* The factors identified in *Cammer* thus serve as useful guideposts for assessing whether the market for a particular stock is efficient, although, given the fact-intensive nature of the market efficiency analysis, the *Cammer* indicia are neither dispositive nor exhaustive. *See Xcelera.com*, 430 F.3d at 511; *Simpson v. Specialty Retail Concepts, Inc.*, 823 F. Supp. 353, 355 (M.D.N.C. 1993) ("It is not necessary that a stock satisfy all five factors in order for the market in that stock to be efficient. Furthermore, while the *Cammer* factors are instructive, they are by no means exhaustive.") (citation omitted).

Courts addressing the market efficiency question generally consider some or all of the factors discussed in *Cammer* and sometimes look to others, including:

(1) the company's market capitalization, "calculated as the number of shares multiplied by the prevailing share price." *Krogman*, 202 F.R.D. at 478. That factor might indicate whether a market possesses efficiency "because there is a greater incentive for stock purchasers to invest in more highly capitalized corporations." *Id.*

(2) the bid-ask spread, comprising "the difference between the price at which investors are willing to buy the stock and the price at which current stockholders are willing to sell their shares." *Id.* A large bid-ask spread might indicate market ***in***efficiency "because it suggests that the stock is too expensive to trade." *Id.*

(3) the float, or "the percentage of shares held by the public, rather than insiders." *Id.* The smaller the float, "the less likely it is that the security's price accurately reflects all available public information because insiders are more likely to have access to private information relating to the security." *Menkes v. Stolt-Nielsen S.A.*, 270 F.R.D. 80, 97 n.21 (D. Conn. 2010).

The *Cammer*-plus factors, taken together, "seek to evaluate the two core requirements for an efficient market: large numbers of rational and intelligent investors, and important current information that is almost freely available to all participants." *Menkes*, 270 F.R.D. at 97 (citation and internal quotation

marks omitted). However, while all of the above-referenced elements are relevant to the efficiency determination, the fifth *Cammer* factor – the causal relationship between company-related disclosures and a prompt response in the company's stock price – is "in many ways, the most important." *Xcelera.com*, 430 F.3d at 512.

Plaintiffs attempting to demonstrate a causal relationship between "unexpected corporate events or financial releases" and stock price reaction often employ an expert-generated "event study," *i.e.*, "a regression analysis that examines the effect of an event" on the price of a company's stock. *RMED Int'l, Inc. v. Sloan's Supermarkets, Inc.*, No. 94 Civ. 5587 (PKL) (RLE), 2000 U.S. Dist. LEXIS 3742, at *22-23 (S.D.N.Y. Mar. 24, 2000), *aff'd*, 2000 U.S. Dist. LEXIS 4892 (S.D.N.Y. Apr. 17, 2000). More specifically, an event study analyzes "the association between news about a company (good, bad, or neutral) and stock price movements." Madge S. Thorsen, *et al.*, *Rediscovering the Economics of Loss Causation*, 6 J. BUS. & SEC. L. 93, 109 (2005/2006). The event study "attempts to determine whether ***new*** information correlates with a price movement – including the price movement's direction and, perhaps, magnitude." *Countrywide*, 2009 U.S. Dist. LEXIS 129807, at *104 (emphasis added). That correlation allows for an inference "that the new information has caused the price movement." *Id.*; *see also HealthSouth*, 257 F.R.D. at 281-82 (concluding plaintiffs' expert's event study demonstrated "that HealthSouth stock reacted

to the release of new, material information regarding HealthSouth and thus traded in an efficient market during the Class Period").

An event study essentially involves "three interrelated stages." Thorsen, *et al.*, *Rediscovering the Economics*, 6 J. BUS. & SEC. L. at 110. The first stage consists of a "review of all available public information, on a qualitative basis, to identify what investors would find 'material.'" *Id.* That stage "is guided by economic principles, literature, and the experience of the researcher." *Id.* The information "can come from analysts' reports, press releases, securities filings, news articles (newspapers and daily publications, as well as more general publications), and Internet bulletin board postings to the extent they appear to represent informed investors' perceptions." *Id.* The second stage of the event study "involves identification of the relevant market and guideline (or peer group companies) and the construction of a 'market model.' How the relevant market moved is compared to the movement of the stock. How the peer companies' stock moved is compared to the subject as well." *Id.* That process generates "a market model that predicts the daily return of the security based on the daily returns of an appropriate mix of market indices and an industry index." *Id.* The third stage of the study involves analysis of "the security's returns on identified event days or series of days" by observing "what the market and industry indices predicted and what the security actually did." *Id.* In other words, those statistical techniques "separate out the

impact of market and industry forces on the price so that the impact of all company-specific news (including news relating to the fraud) is isolated." *Id.*

An event study thus is "premised on analyzing whether there are statistically significant price movements in reaction to company specific news, market forces, and industry forces." *Id.* at 111. Notably, "analysis of a single day may not tell the whole story in some situations," such as (1) "where the dissipating impact of bad news" on the price of the security "is muted by prior leakage" of that information; (2) "where the dissipating impact of leakage is itself muted by confounding inflationary events such as denials by management"; or (3) in "omissions cases, where had the truth been known, the price would have dropped, and statistically significant price increases will therefore not be manifest." *Id.* To address those circumstances, "event studies may consider 'event windows' or several days over time, looking at joint statistical significance." *Id.* As a general matter, then, "if there are bits and pieces of bad news that cumulate over time, the aggregate effect will need to be considered." *Id.*

Courts have deemed such expert analysis useful in assessing market efficiency. *See In re NetBank, Inc., Sec. Litig.*, 259 F.R.D. 656, 673 n.9 (N.D. Ga. 2009) (observing that an event study "is the preferred and predominant method for assessing the . . . efficiency of any market") (ellipsis in original) (citation and internal quotation marks omitted). Indeed, "[a]n event study that correlates the disclosures of

unanticipated, material information about a security with corresponding fluctuations in price has been considered *prima facie* evidence of the existence of such a causal relationship." *Teamsters Local 445 Freight Div.*, 546 F.3d at 207-08 (citing *Xcelera.com*, 430 F.3d at 512-14, 516).

In *Xcelera.com*, for example, to demonstrate the cause-and-effect relationship between corporate information and stock price, plaintiffs' expert "presented the results of a sophisticated event study analyzing how Xcelera stock price reacted to company-specific events," listing "more than forty separate instances, thirty-six of which occurred during the Class Period, in which Xcelera stock price rose or fell . . . within one day of the release of company-specific information." 430 F.3d at 512-13 (footnote omitted). The study also examined "how Xcelera's stock price reacted to information in the industry and in the general stock market (the NASDAQ, which is the largest electronic, screen-based market in the world)." *Id.* at 512 n.10 (citation and internal quotation marks omitted).

Furthermore, in addition to a one-day stock price reaction window, the event study listed, "as a control, the effect of company-specific information over longer windows of two, three, and five days, respectively." *Id.* at 513 n.11. The First Circuit rejected defendants' argument that the multiple-day windows were "inconsistent with the requirement that an efficient market must rapidly reflect all publicly available information," as the event study "capture[d] the

same-day reaction of Xcelera's stock price to company-specific events." *Id.*; *see also Lehocky*, 220 F.R.D. at 506 & n.19 (observing that plaintiffs' expert, in conducting an event study, "identified two-day periods in which information pertaining to Tidel was released to the public and separated those two days from other two day periods in which there was no public information pertaining to Tidel," and noting plaintiffs' expert and defendants' expert "agreed that the use of such two-day periods and segregation of those two day periods into 'information days' and 'non-information days' was appropriate").[8]

Plaintiffs' expert, through the event study, "concluded that the Xcelera market reacted strongly – both positively and negatively – to new information concerning the company (including, but not limited to, disclosures at issue in th[e] case)" and, conversely, "found that re-releases of old information, such as secondary announcements about acquisitions or new investments, resulted in only a modest stock price reaction or no reaction at all." *Xcelera.com*, 430 F.3d at 513. The expert further supported his event study with two affidavits and testimony at a two-day

---

[8] Courts have not adopted a dispositive temporal threshold for establishing the prompt or rapid reaction of stock price to material news relating to a company. The absence of a uniform standard accords with the fact-specific nature of the market efficiency inquiry as well as this Court's refusal "conclusively to adopt any particular theory of how quickly and completely publicly available information is reflected in market price." *Basic*, 485 U.S. at 248 n.28.

hearing partially devoted to the findings of the study. *Id.* at 514.

Econometric analysis of the type employed in *Xcelera.com* has become routine in securities cases. *See, e.g.*, *NetBank*, 259 F.R.D. at 673 (plaintiffs' expert submitted, *inter alia*, a 102-page event study containing, for each day within the period, "(1) the relevant date; (2) trading volume; (3) closing price; (4) percentage price change; (5) dollar amount price change; (6) NASDAQ bank index; (7) percentage index change; (8) predicted NetBank percentage change; (9) the residual, or actual minus predicted NetBank percentage change; (10) the dollar amount of the change in NetBank stock not explained by the NASDAQ bank index change; (11) whether there was a statistical significance between the NetBank and index change; and (12) the headlines of any news items issued on that date"); *In re Alstom SA Sec. Litig.*, 253 F.R.D. 266, 279-80 (S.D.N.Y. 2008) (court found market efficiency existed where, in addition to providing evidence related to the first four *Cammer* factors, plaintiffs proffered an expert who "conducted an event study comparing the day-to-day percentage change in Alstom's share prices that resulted from disclosures of new information and concluded that Alstom was over 6 times more likely to have a statistically significant stock return on a day with news

than on a day with no news") (citation and internal quotation marks omitted).[9]

A party attempting to establish (or disprove) the efficiency of the relevant market might also submit a "serial correlation test," which – while less common than an event study – offers "a statistical examination of the sequence of prices" of the subject stock during the class period "that tests for market efficiency by looking for trends in stock pricing." *Lehocky*, 220 F.R.D. at 506. Where a market is efficient, "there should be no trends because the market should be reacting quickly to new information, and new prices are being set quickly based upon the new information." *Id.* Conversely, a serial correlation in stock prices "lends to a finding of market inefficiency." *Id.* at 506-07 (court further observed that plaintiffs' expert's testing indicated a serial correlation of -.02, "a strong, highly statistically significant indication that the market for Tidel common stock was efficient during the class period"). *Cf. Countrywide*, 2009 U.S. Dist. LEXIS 129807, at *105-06 (stating "the presence of serial correlation suggests inefficiency" but "is not itself determinative of inefficiency").

As the foregoing discussion illustrates, securities plaintiffs seeking to invoke the fraud-on-the-market

---

[9] These examples are not intended to endorse any particular factual threshold or level of analysis to demonstrate market efficiency. Rather, they simply illustrate the nature of the inquiry courts undertake and the types of information parties and their experts typically provide.

presumption of reliance already must carry a substantial burden at the class certification stage. As detailed below, by setting loss causation – an element of a Section 10(b) claim that is analytically distinct from reliance – as a foundational prerequisite of the fraud-on-the-market presumption, the Fifth Circuit has inordinately heightened the class certification hurdle. The Fifth Circuit's conflation of reliance and loss causation arises from a misconception of the nature of the market efficiency analysis and a distortion of this Court's prior jurisprudence, including *Basic*.

D. Market Efficiency And Loss Causation Are Distinct Concepts, And The Latter Should Not Be Conscripted As A Prerequisite To Triggering The Fraud-On-The-Market Presumption.

As explained above, market efficiency – universally recognized among courts as a foundational requirement to employing the fraud-on-the-market presumption – measures stock price reaction to new or unexpected information relating to the company at issue in the litigation. Whether a security trades in an efficient market determines whether plaintiffs are able to demonstrate reliance, or "transaction causation." *See Dura Pharms., Inc. v. Broudo*, 544 U.S. 336, 341 (2005) (noting reliance is "often referred to" in fraud-on-the-market cases "as 'transaction causation'"). Loss causation, on the other hand, refers to the "causal connection between the material

misrepresentation and the loss." *Id.* at 342. It is a distinct element of a Section 10(b) claim. *Id.*; *see also Lentell v. Merrill Lynch & Co.*, 396 F.3d 161, 172 (2d Cir. 2005) (explaining that transaction causation "is akin to reliance," meaning "that but for the claimed misrepresentations or omissions, the plaintiff would not have entered into the detrimental securities transaction," while loss causation "is the causal link between the alleged misconduct and the economic harm ultimately suffered by the plaintiff") (citations and internal quotation marks omitted). Similar to the tort concept of proximate cause, which embodies the element of foreseeability, the loss causation requirement "is intended to fix a legal limit on a person's responsibility, even for wrongful acts." *Lentell*, 396 F.3d at 174 (citation and internal quotation marks omitted).

Courts have expressed the differences between reliance and loss causation. Moreover, courts generally resist conflating those separate elements of a Section 10(b) claim. *See Schaaf v. Residential Funding Corp.*, 517 F.3d 544, 552 (8th Cir. 2008) (explaining distinction between transaction causation, which courts presume "when an investor buys or sells stock at a price set by a liquid market in reliance on the integrity of that price," and loss causation, as to which "plaintiffs must plead and prove that the loss was foreseeable and caused by the materialization of the concealed risk"); *Caremark, Inc. v. Coram Healthcare Corp.*, 113 F.3d 645, 648-49 (7th Cir. 1997) (noting allegation that investor "would not have

invested but for the fraud" addresses transaction causation, while for loss causation, investor must allege "that, but for the circumstances that the fraud concealed, the investment . . . would not have lost its value") (ellipsis in original) (citation and internal quotation marks omitted); *see also Robbins v. Koger Props., Inc.*, 116 F.3d 1441, 1448 (11th Cir. 1997) (observing Eleventh Circuit's cases "have not utilized the [fraud-on-the-market] theory to alter the loss causation requirement").

Indeed, this Court, in *Dura*, held securities plaintiffs cannot establish loss causation simply by proving "that the price *on the date of purchase* was inflated because of the misrepresentation." 544 U.S. at 342 (emphasis in original) (citation and internal quotation marks omitted). Plaintiffs in that case contended they properly pled loss causation by alleging "that the stock price on the date of purchase was inflated because of the misrepresentations or omissions and they would not have purchased the stock had they known about Defendants' wrongdoing." *In re Dura Pharms., Inc. Sec. Litig.*, No. 99cv0151-L(NLS), 2001 U.S. Dist. LEXIS 25907, at *31 (S.D. Cal. Nov. 2, 2001), *rev'd*, *Broudo v. Dura Pharms., Inc.*, 339 F.3d 933 (9th Cir. 2003), *rev'd*, 544 U.S. 336 (2005). Plaintiffs' allegation thus corresponded more closely to transaction causation than to loss causation.

This Court, however, held plaintiffs did not adequately allege loss causation, reasoning "[n]ormally, in cases such as this one (*i.e.*, fraud-on-the-market cases), an inflated purchase price will not itself constitute or proximately cause the relevant economic

loss." *Dura*, 544 U.S. at 342. Among the bases for its conclusion, the Court observed that "[j]udicially implied private securities fraud actions resemble in many (but not all) respects common-law deceit and misrepresentation actions" and the common law of deceit "has long insisted that a plaintiff . . . show not only that had he known the truth he would not have acted but also that he suffered actual economic loss." *Id.* at 343-44. The Court thus recognized the meaningful distinction between reliance (or transaction causation) and loss causation in securities cases – and refused to merge those elements.

Residing at the core of transaction causation in fraud-on-the-market cases, the concept of market efficiency likewise differs in nature from loss causation. The market efficiency inquiry attempts to discern whether it is logical to presume that investors' reliance on the price of the security in a given case is an adequate proxy for their reliance on the actual misstatements or omissions defendants disseminated. As such, the market efficiency analysis encompasses a general examination of the company involved, the market in which the company trades and the responsiveness of the price of the company's securities to new or unexpected material information; the inquiry addresses how investors reacted ***at the time company-related statements were made***.

The loss causation inquiry, by contrast, entails an examination of whether investors suffered losses once the revelation of the "truth" concealed by the alleged misrepresentations ultimately emerged. *See Miller*,

615 F.3d at 1102 ("the loss causation inquiry assesses whether a particular misstatement *actually* resulted in loss") (emphasis in original). The loss causation inquiry is thus inherently "historical and context-dependent." *Id.* None of the criteria courts typically evaluate to assess market efficiency – including whether a causal relationship between new or unexpected material information and a company's stock price movement exists – demands, or even countenances, the injection of loss causation as a *sine qua non* of invoking the fraud-on-the-market presumption.

Moreover, the substantive distinction between market efficiency and loss causation bears on the court's inquiry at the class certification stage. As the animating force behind the fraud-on-the-market presumption, market efficiency is susceptible of examination at class certification because the court must determine whether the class as a whole can utilize the presumption to establish reliance at trial. The presumption coheres the class for predominance purposes; without it, the class is beset by individualized issues of reliance and cannot proceed. A market efficiency determination – which does not equate to a ruling that plaintiffs have proven the facts necessary to utilize the presumption at trial, *PolyMedica*, 432 F.3d at 7 n.10 – therefore is essential to a court's decision on class certification. *See Castillo v. Envoy Corp.*, 206 F.R.D. 464, 471 (M.D. Tenn. 2002) (concluding "a preliminary determination as to the 'availability' or applicability of the presumption, which is distinct from its actual application, can be made at

th[e] [class certification] stage without dealing with the merits of the case").

Loss causation, however, is purely a merits issue that does not overlap with Rule 23 requirements. Moreover, it is provable or disprovable on a classwide basis. *See, e.g.*, *Schleicher*, 618 F.3d at 687 ("After a class has been certified, and other elements of the [Section 10(b)] claim have been established, the court will need to pin down *when* the stock's price was affected by any fraud. That decision . . . can be made on a class-wide basis, because it affects investors in common.") (emphasis in original); *accord In re Boston Scientific Corp. Sec. Litig.*, 604 F. Supp. 2d 275, 284 (D. Mass. 2009); *Ross v. Abercrombie & Fitch Co.*, 257 F.R.D. 435, 454-55 (S.D. Ohio 2009).

In light of the foregoing, and as analyzed in detail in Petitioner's brief, the Fifth Circuit's intertwining of loss causation and reliance distorts *Basic* and *Dura*. The Fifth Circuit's rogue approach embodies a fundamental misunderstanding of the disparate roles market efficiency and loss causation play in fraud-on-the-market securities cases. Moreover, plaintiffs, who already bear a serious burden to show market efficiency as a prerequisite to triggering the fraud-on-the-market presumption, should not be saddled with the onerous additional requirement of demonstrating loss causation at the class certification stage.

IV. CONCLUSION

For the foregoing reasons, in addition to the arguments and authorities set forth in Petitioner's brief, this Court should reject the Fifth Circuit's improper requirement that securities plaintiffs demonstrate loss causation as a prerequisite to invoking the fraud-on-the-market presumption of reliance at the class certification stage. Consequently, this Court should reverse the Fifth Circuit's decision overturning class certification in this case.

QUESTIONS PRESENTED

1. Whether the Fifth Circuit correctly held that plaintiffs in private securities fraud actions must at class certification not only satisfy the requirements set forth in *Basic, Inc. v. Levinson*, 485 U.S. 224 (1988) to invoke a rebuttable presumption of fraud-on-the-market, but must also establish loss causation by a preponderance of admissible evidence.

2. Whether the Fifth Circuit improperly considered the merits of the underlying litigation, in violation of both *Eisen v. Carlisle & Jacquelin*, 417 U.S. 156 (1974) and Federal Rule of Civil Procedure 23, when it held that plaintiffs must establish loss causation at class certification to invoke the fraud-on-the-market presumption.

National Association of State Retirement Administrators, "The Economic Effects of Public Pensions" 1

INTEREST OF THE *AMICUS CURIAE*[1]

The National Conference on Public Employee Retirement Systems (hereinafter NCPERS) is a national organization focused on the preservation, growth and stability of public pension plans and funds. NCPERS is the largest non-profit public pension advocacy organization, representing over 500 governmental pension funds that manage nearly $3 trillion in pension assets. NCPERS was founded in 1941 to protect the pensions of public employees by representing public pension organizations on Capitol Hill, providing trustee education and providing essential pension information to trustees, administrators and public officials.[2]

Public employee pension funds have historically been among the most active institutional investors in the securities markets. More than $1.5 trillion of public pension assets are invested in equities of U.S. and foreign companies, while another $700 billion is invested in bonds issued by the U.S. government, foreign governments, and corporations.[3] Public employee pension funds have also

---

1. As required by Supreme Court Rule 37.6, counsel certifies that this brief was not authored in whole or in part by counsel for any party, and no person or entity other than the *amicus curiae*, their members or undersigned counsel made a monetary contribution to the preparation or submission of this brief. The parties have filed blanket consents to the filing of all amicus briefs.

2. General information concerning NCPERS as well as specific data regarding its activities can be found at its website: www.ncpers.org.

3. "The Economic Effects of Public Pensions," National Association of State Retirement Administrators (www.nasra.org).

taken an active role in private securities fraud litigation.[4] As a result, NCPERS has taken a leadership role on behalf of its member retirement systems with respect to legislative and regulatory actions related to securities fraud through research, published studies and position papers, and the filing of *amicus* briefs.

Because NCPERS' constituents are among the most active investors in the capital markets, they are rightly concerned about the decision of the Fifth Circuit Court of Appeals in *The Archdiocese of Milwaukee Supporting Fund, Inc. v. Halliburton Co.; David J. Lesar*, 597 F.3d 330 (5th Cir. 2010), which threatens to dramatically alter the landscape of securities fraud litigation, which has functioned effectively following enactment of the Private Securities Litigation Reform Act of 1995 ("PSLRA") and subsequent judicial interpretation of the PSLRA.

As the largest holders of publicly traded capital in the United States, public pension plans are particularly sensitive to any action which undermines the security of those investments. The threat to the pension funds as shareholders and the resulting potential for officer and director misconduct, to the detriment of those funds, threatens the underlying assets which support the state constitutionally guaranteed benefits payable to millions of American public employees and retirees.

---

4. Public employee pension funds are among the plaintiffs in many private securities fraud class action lawsuits, and have served as lead or co-lead plaintiffs in a number of such suits.

SUMMARY OF ARGUMENT

In the enforcement of the nation's securities laws by investors, Congress recognized that institutional investors like public employee pension plans would be the plaintiffs most likely to achieve the best result on a just basis for the most investors. See *In re Cendant Corporation Litigation*, 264 F.3d 201 (3rd Cir. 2001); Cox and Thomas, "Does the Plaintiff Matter? An Empirical Analysis of Lead Plaintiffs in Securities Class Actions," 106 Colum. L. Rev., 1587 (2006). Aware of their important and unique role in the ongoing battle against securities fraud, the public pension community is deeply concerned about any changes in the "rules of engagement" in securities litigation.

Like Congress, this Court has noted in a number of cases the critical role of private securities litigation in achieving the goals of the securities laws. See, for example, *Dura Pharms., Inc. v. Broudo*, 544 U.S. 336, 345 (2005) (emphasizing the importance of the private right of action in securities cases in maintaining public confidence and deterring fraud); see, also, *Bateman, Eichler, Hill Richards, Inc. v. Berner*, 472 U.S. 299, 310 (1985) (stating that "private actions are a most effective weapon in the enforcement of the securities laws.").

In the intervening years following passage of the PSLRA, class action private securities litigation filed on behalf of institutional investors such as public employee pension funds has recovered untold millions of dollars, and has complemented efforts by such regulatory agencies as the Securities and Exchange Commission and the Department of Justice in exposing corporate fraud. In fact, several studies have looked at the relative

effectiveness of private securities fraud litigation versus SEC enforcement of the securities laws, and concluded that plaintiffs in securities fraud lawsuits achieve far greater success with respect to recovery than the SEC. (John C. Coffee, Jr., *Reforming the Securities Class Action: An Essay on Deterrence and Its Implementation*, 106 Colum. L. Rev. 1534, 1542-43, tbls. 2,3 (2006).

Subsequent federal legislation such as the Sarbanes-Oxley Act of 2002, as well as a growing body of judicial decisions, have resulted in well-established procedural, evidentiary, and substantive rules governing private securities fraud litigation. The particular rule at issue in this case – that the element of reliance in private securities litigation brought under a fraud-on the market theory is presumed when the information at issue becomes public – was first articulated by this Court in *Basic, Inc. v. Levinson*, 485 U.S. 224 (1988), and reiterated in *Stonebridge Investment Partners, LLC v. Scientific-Atlanta, Inc.*, 552 U.S. 148 (2008). The Fifth Circuit's holding in this case (which is based on its holding on its prior decision in *Oscar Private Equity Investments v Allegiance Telecom, Inc.*, 487 F.3d 261 (5th Cir. 2007), a decision that has not been adopted by any other circuit, and that has been roundly criticized) marks a significant departure from this rule, and sets a dangerous precedent if permitted to stand. At a time when private and institutional investors alike are still reeling from staggering economic losses in the financial markets over the past five years, it is more critical than ever to preserve the viability of private securities litigation in maintaining the integrity of the marketplace.

Public employee pension funds occupy a unique position among institutional investors. Unlike other

institutional investors such as insurance companies or mutual funds, the assets of public employee pension funds are not derived from policyholder premiums or private investments, but from public employee and taxpayer contributions. When the security of public pension fund assets is threatened – whether from economic downturns, legislation, or corporate misconduct – it is often the public employees and taxpayers who eventually bear the burden of making up the shortfall.

ARGUMENT

1. THE FIFTH CIRCUIT DECISION WILL SIGNIFICANTLY IMPAIR THE ABILITY OF PUBLIC EMPLOYEE RETIREMENT FUND TRUSTEES TO FULFILL ONE OF THEIR FUNDAMENTAL FIDUCIARY RESPONSIBILITIES – PROTECTION OF THEIR FUNDS' ASSETS -- TO THE DETRIMENT OF THE MEMBERS AND BENEFICIARIES OF THOSE FUNDS AND THE GOVERNMENTAL ENTITIES WHICH SPONSOR THEM.

As of 2006, state and local government retirement plans served close to 26 million Americans, including 14.5 million active participants, 4 million inactive members and 7.3 million retirees and other beneficiaries receiving regular payments. Total benefit payments in 2006 were $151.7 billion, for an average benefit payment of $1,739.00 per month of $20,867.00 per year. (Boivie and Almeida, "Pensionomics - Measuring the Economic Impact of State and Local Government Retirement Plans," National Institute on Retirement Security, February 2009; http://www.nirsonline.org/index.)

In 2006, the total state and local government pension receipts were $392.8 billion, with government contributions totaling $64.5 billion, employee contributions of $32.7 billion, and earnings on investments accounting for $295.6 billion. Put differently, of the total state and local government pension fund receipts in 2006, 16.4% came from employer contributions, 8.3% from employee contributions, and 75.3% from investment earnings. *Id.*, (See also, U.S. Census Bureau. 2007. State and Local Government Employee-Retirement Systems, Washington, D.C.: U.S. Census Bureau - http://www.census.gov/govs/www/retire.html.)

The pattern of investments constituting the overwhelming source of pension assets has proven to be true over time. Between 1993 and 2006, 19.6% of pension receipts came from employer contributions, 10.8% from employee contributions and 69.6% from investment earnings. Earnings on investments have, therefore, historically made up the bulk of public pension fund receipts. (Boivie and Almeida, *supra* at 2.)

The decline in the capital markets in recent years, including losses attributable to officer and director misconduct, has significantly eroded the funding status of public plans. (Park, "Public Plan Asset Allocations," Employee Benefit Research Institute, Volume 30, No. 4, April 2009 - http://www.ebri.org/publications.)

The impact of resulting underfunding has been estimated over a 15-year horizon to be almost $2 trillion in 2005 dollars. (See, Marx and Rauh, NBER Working Paper Series, "The Intergenerational Transfer of Public Pension Promises," National Bureau of Economic Research, September 2008 - www.nber.org/paper/w14343.pdf.)

It is therefore abundantly clear that anything which threatens the financial security of the underlying assets of public employee retirement systems threatens the security of 25 million Americans. In addition, losses attributable to pension fund participation in the capital markets, particularly losses attributable to officer and director misconduct, go directly to the constitutionally guaranteed promise applicable in every state. Other specific state constitutional provisions relating to retirement or impairment of contract provisions have, in all fifty states, been interpreted to assure that public pension benefits are ultimately a taxpayer guarantee. (See, for example, Article XII, Section 7, Constitution of Alaska; Article I, Section 10, Florida Constitution; Article X, Section 29, Louisiana Constitution; and Article V, Section 7, New York Constitution.)

The decision of the Fifth Circuit Court of Appeals threatens the security of public pension fund assets invested in the capital markets by imposing an additional burden on lead plaintiffs in securities fraud litigation.

This Court has held that Congress "intended securities legislation ... to be construed not technically and restrictively, but flexibly to effectuate its remedial purposes." *Affiliated Ute Citizens of Utah v. United States*, 406 U.S. 128, 151 (1972). By imposing an additional and substantial burden on plaintiffs to prove loss causation at the class-certification stage of litigation, the Fifth Circuit's holding essentially ignores the Court's holding in the *Utah* case. Further, the Fifth Circuit's approach has been rejected by both the Second and Seventh Circuit Courts of Appeal, as well as numerous federal district courts. See, for example, *In re Salomon Analyst Metromedia Litigation*, 544 F.3d 474, 483 (2d Cir 2008)(rejecting the

requirement that plaintiffs demonstrate loss causation at the certification stage), and *Schleicher v. Wendt*, 618 F.3d 679, 687 ("*Oscar Private Equity* represents a go-it-alone strategy by the fifth circuit. It is not compatible with this circuit's decisional law, and we disapprove its holding"). (internal citations omitted).

Among the fiduciary responsibilities of public employee pension fund trustees, few are as fundamentally important as the duty of stewardship – the duty to vigorously preserve and protect the assets of the fund. This duty informs virtually every decision trustees make with respect to the fund's assets, but it is particularly relevant to investment-related decisions. For this reason, trustees must exercise due-diligence and prudence when investing the funds' assets. Once the funds are invested, trustees must diligently monitor the performance of the assets. If the trustees become aware of possible investment fraud that affects the fund's investments, trustees are obligated to take reasonable and prudent measures to recover assets lost as a result of the fraud. One of these measures is participation in private securities fraud litigation, either as members of the class, or, as noted *supra*, as lead or co-lead plaintiffs. See, *In re California Micro Devices Securities Litigation*, 168 F.R.D. 276 (N.D. Cal. 1996); *Gluck v. Cellstar Corp.*, 976 F. Supp. 542 (N.D. Tex. 1997) (courts found public retirement plans particularly well suited serve as lead plaintiffs in private securities actions).

Forty five states (also including the District of Columbia and the Virgin Islands) have adopted the Uniform Prudent Investor Act which incorporates the modern portfolio management theory embodied by the Restatement 3d of Trusts. See, *Uniform Prudent Investor*

Act, References and Annotations (2011). This heightened standard of care in the management of pension assets requires greater reliance on third parties to invest pension assets. As a result, pubic pension trustees have a greater duty to vigorously protect the assets they have entrusted to the market to ensure that the fiduciary standards applicable to the trustees are also applied to those who manage the assets and run the companies whose issues are purchased. *Uniform Prudent Investor Act, Sections 3, 8-9.*

The Fifth Circuit's decision constitutes what amounts to an insurmountable judicial barrier to public employee fund trustees to ferret out and seek redress for investment fraud on behalf of their members, retirees, and beneficiaries as their respective governing laws require them to do. The Seventh Circuit correctly noted that the Fifth Circuit approach in *Oscar* and in the case below "would do more than just 'tighten' the requirements for class certification. It would make certification impossible in many securities suits." *Schleicher*, 618 F.3d 679, 686. The *Schleicher* court even took the extraordinary step of reprimanding the Fifth Circuit: "We do not think it appropriate for the judiciary to make its own further adjustments by reinterpreting Rule 23 to make likely success on the merits essential to class certification insecurities-fraud suits." *Id.* At 686.

CONCLUSION

For the above and foregoing reasons, *amicus curiae* respectfully urges that the decision of the Fifth Circuit Court of Appeal be reversed.

Respectfully submitted,

On Writ of Certiorari to the United States Court of Appeals for the Fifth Circuit

BRIEF OF PHARMACEUTICAL RESEARCH AND MANUFACTURERS OF AMERICA (PhRMA) AS *AMICUS CURIAE* IN SUPPORT OF RESPONDENTS

INTEREST OF *AMICUS CURIAE* [1]

The Pharmaceutical Research and Manufacturers of America (PhRMA) is a voluntary, nonprofit association that represents the country's leading research-based pharmaceutical and biotechnology

[1] As required by Supreme Court Rule 37.6, counsel certifies that no party's counsel authored this brief in whole or in part, and that no person or entity other than the *amicus curiae*, its members or undersigned counsel made a monetary contribution to the preparation or submission of this brief. Additionally, the parties have filed blank consents to the filing of all amicus briefs.

companies. PhRMA's members are dedicated to developing medicines and therapeutics that enable patients to lead longer, healthier, and more productive lives.[2] In 2010, PhRMA members invested approximately $49.4 billion (of an industry total of approximately $67.4 billion) in discovering and developing new medicines.[3] New medicines account for 40 percent of the increase in human lifespan between 1986 and 2000. *See* Frank R. Lichtenberg, *The Impact of New Drug Launches on Longevity: Evidence From Longitudinal, Disease-Level Data From 52 Countries, 1982-2001* 21 (Nat'l Bureau of Econ. Research, Working Paper No. 9754, 2003). PhRMA's mission is to advocate in support of public policies that encourage the discovery of life-saving and life-enhancing medications and products for patients.

PhRMA closely monitors legal issues that impact the pharmaceutical industry and has regularly participated as *amicus curiae* in cases before this Court. *See, e.g.*, *Schindler Elevator Corp. v. U.S. ex rel. Kirk*, No. 10-188 (U.S. argued Mar. 1, 2011); *Astra USA, Inc. v. Santa Clara County*, No. 09-1273 (U.S. Mar. 29, 2011); *Matrixx Initiatives, Inc. v. Siracusano*, No. 09-1156 (U.S. Mar. 22, 2011); *Merck & Co., Inc. v. Reynolds*, 130 S.Ct. 1784 (2010).

---

[2] A list of PhRMA's members is *available at* http://www.phrma.org/about/member-companies.

[3] *See* Burrill & Co., *Analysis for PhRMA* (2011) (industry total includes PhRMA research associates and non-members); PhRMA, *Annual Member Survey* (Washington, DC: PhRMA, 2010-2011).

The issues this case presents are especially significant to PhRMA because a number of its members have borne the expense and burden of defending against securities fraud class actions in recent years. In 2008 and 2009, for example, over 40 such actions were filed against pharmaceutical and biotechnology companies.[4] These suits, which this Court has recognized are particularly susceptible to abuse, raise the already substantial costs and risks associated with the development of new medicines. Because a class certification order significantly raises the stakes and the costs of litigating, any later-stage opportunity to require proof of class-wide investor reliance or rebuttal thereof comes only after the dynamics of a case have dramatically changed.

Indeed, many courts and commentators have noted that because of the pivotal status of class certification in large scale litigation, certification decisions often have a decisive effect on the outcome of a case. An order granting certification may force a defendant to settle, regardless of a case's merits, rather than incur the costs of defending a class action. Accordingly, the outcome of this case and its impact on resources being expended in meritless or excessive class action litigation threaten the ability of pharmaceutical and biotechnology companies to research and develop new medical advances.

SUMMARY OF ARGUMENT

In deciding this appeal, the proper focus should be on the district court's obligation to ensure the class certification requirements of Federal Rule of Civil Procedure 23 are met. At the class certification stage, a district court must assess whether the fraud-on-the-market presumption of reliance presents a viable method of class-wide proof sufficient to meet Rule 23(b)(3)'s predominance requirement. That requirement warrants a "close look" before a case is accepted as a class action, and any evidence bearing on the viability of the presumption properly falls within the scope of the district court's review. Here, the court of appeals held that petitioner had to show price impact to satisfy the predominance requirement, but failed. That holding is consistent with Rule 23(b)(3) and this Court's application of that Rule in *Basic Inc. v. Levinson*, 485 U.S. 224 (1988).

Contrary to the position of petitioner and its *amici*, and a recent decision from the Seventh Circuit, the following principles apply to all securities fraud actions in which, as here, a plaintiff invokes the fraud-on-the-market presumption to satisfy Rule 23(b)(3) predominance.

The fraud-on-the-market presumption is only a potential—not certain—method of proof in each case. Thus, considerations relevant to the presumption's viability set the scope of the district court's Rule 23(b)(3) examination.

The presumption rests on *multiple* factors, including whether the alleged misstatement was material and capable of distorting the security's market price. Further, as this Court observed in *Basic*, relevant evidence includes any that severs the

link between the alleged misrepresentation and the price. 485 U.S. at 248. Proof showing the absence of price impact, including the market's failure to react to disclosures correcting the allegedly misstated or concealed information, *i.e.*, the absence of "loss causation," can sever the link. When it does, the district court must consider such evidence as part of its rigorous Rule 23 analysis.

As a proposed class-wide method of proving reliance and overcoming individualized issues, the fraud-on-the-market presumption is subject to Rule 23(b)(3)'s close scrutiny. It is not enough that the presumption's elements or rebuttal proof are susceptible to common proof. Rule 23(b)(3)'s convenience and judicial economy objectives are at risk if the presumption ultimately fails to provide a common method of proving reliance at trial. Thus, district courts must predict how the presumption will play out.

Consistent with Rule 23(b)(3) and *Basic*, the Second Circuit sensibly allows the defendant an opportunity to rebut the presumption before certifying the class. *In re Salomon Analyst Metromedia Litig.*, 544 F.3d 474 (2d Cir. 2008). This opportunity ensures that any information bearing on the presumption's viability comes to the district court's attention and assists it in discharging its Rule 23 obligation. A rebuttal opportunity is particularly helpful to district courts in securities fraud actions based on alleged misstatements concerning the development and testing of medicines and therapeutics—a process made effectively transparent by the FDA's regulatory framework and one that often puts the alleged materiality of the purportedly concealed or misstated information in question.

In the end, the Second Circuit in *In re Salomon* and the Fifth Circuit in this case each enable a district court to evaluate information needed to assess the viability of the presumption before certifying a class. When the materiality of the alleged misstatements and their actual impact on price are called into question at the class certification stage, evidence bearing on these issues will come before the district court, whether in plaintiff's initial showing or the defendant's rebuttal. Either way, with the evidence before the district court, the result is the same, and the district court can decide whether Rule 23(b)(3) predominance is met.

In seeking reversal, petitioner and its *amici* rely heavily on the Seventh Circuit's recent decision in *Schleicher v. Wendt*, which holds that a plaintiff does not need to show the misstatement affected the market price before obtaining class certification. 618 F.3d 679 (7th Cir. 2010). That opinion, however, loses sight of the principles governing the use of the presumption as a class-wide method of proof, as well as the district court's role in testing whether such method is viable and satisfies Rule 23(b)(3).

According to *Schleicher*, at the class certification stage, the only relevant fraud-on-the-market element is whether the issuer's stock trades in an efficient market. The other underlying fraud-on-the-market elements, such as materiality, or evidence showing the absence of economic loss arising from the alleged misstatement, present no obstacle to class certification and should not be considered because they all concern questions of law or fact common to the class. This flawed reasoning, however, is not in accord with Rule 23(b)(3) class certification objectives and transforms a district court's rigorous Rule 23(b)(3)

scrutiny into little more than a pro forma exercise. The reasoning in *Schleicher* would, among other things, prevent a district court from considering class-wide evidence rebutting the fraud-on-the-market presumption before certifying a class. As a result, *Schleicher* does not present a correct path to resolving the issues on this appeal.

ARGUMENT

I. The Fraud-On-The-Market Presumption Is Subject To Rule 23(b)(3) Scrutiny

Petitioner bases this securities fraud action on Section 10(b) of the Securities Exchange Act of 1934, 15 U.S.C. § 78j(b), and Securities and Exchange Commission Rule 10b-5, 17 C.F.R. § 240.10b-5.[5] *See Superintendent of Ins. of N. Y. v. Bankers Life & Cas. Co.*, 404 U.S. 6, 13 n.9 (1971) ("It is now established that a private right of action is implied under § 10(b).").

"Reliance by the plaintiff upon the defendant's deceptive acts is an essential element of the § 10(b) private cause of action." *Stoneridge Inv. Partners, LLC v. Scientific-Atlanta, Inc.*, 552 U.S. 148, 159 (2008). Ordinarily, when a plaintiff alleges misstatements, the issue of reliance concerns whether the individual investor read or heard them, and, if so,

---

[6] Section 10(b) of the Securities Exchange Act of 1934 prohibits (1) the "use or employ[ment] . . . [of] any . . . deceptive device," (2) "in connection with the purchase or sale of any security," and (3) "in contravention of" Securities and Exchange Commission "rules and regulations." 15 U.S.C. § 78j(b). Rule 10b-5 prohibits, among other things, the making of any "untrue statement of a material fact" or the omission of any material fact "necessary in order to make the statements made . . . not misleading." 17 C.F.R. § 240.10b-5 (2004).

whether they had any effect on the investor's decision to buy or sell the security. By its nature, this inquiry is too individualized to permit the action to proceed as a class action. Thus, absent a class-wide method of proof, the reliance element invariably defeats Rule 23(b)(3)'s requirement that "questions of law or fact common to class members predominate over any questions affecting only individual members . . . ." FED. R. CIV. P. 23(b)(3); *see Basic,* 485 U.S. at 242 (acknowledging that proof of each proposed class member's reliance forecloses class treatment "since individual issues then would . . . overwhelm[ ] the common ones").

The fraud-on-the-market presumption adopted in *Basic* allows a private securities fraud plaintiff to overcome Rule 23(b)(3)'s otherwise insurmountable predominance hurdle. *See Basic*, 485 U.S. at 242. It rests on the theory that investors rely upon the integrity of a stock's trading price and, when the stock trades in an impersonal, efficient market (an open and developed market), its price reflects all public, material information, including any alleged material misrepresentations or omissions. *See id.* at 244-47. When invoked at the class certification stage, a district court's Rule 23(b)(3) predominance inquiry largely concerns an assessment of the presumption's likely availability at trial. And information relevant to that assessment bears directly on whether Rule 23(b)(3)'s predominance requirement is in fact met.

II. A Rule 23(b)(3) Fraud-On-The-Market Inquiry Must Consider Materiality, Not Just Whether The Security In Question Traded In An Efficient Market

In *Basic*, this Court acknowledged at least four distinct elements "giving rise to the presumption" identified by the court of appeals in that case:

> (1) that the defendant made public misrepresenttations; (2) that the misrepresentations were material; (3) that the shares were traded on an efficient market; (4) that the misrepresentations would induce a reasonable, relying investor to misjudge the value of the shares; and (5) that the plaintiff traded the shares between the time the misrepresentations were made and the time the truth was revealed.

Id. at 248, 248 n.27 (citing *Levinson v. Basic Inc.*, 786 F.2d 741, 750 (6th Cir. 1986), and noting that "elements (2) and (4) may collapse into one").

Consistent with *Basic*'s listing of several different fraud-on-the-market elements, the economic logic of the presumption requires several underlying factual premises, only one of which is an efficient market. For example, an efficient market can only impound in the price an alleged misstatement that is public. *See Gariety v. Grant Thornton, LLP*, 368 F.3d 356, 369 (4th Cir. 2004) (instructing the district court on remand to address "whether [defendant] made a public misrepresentation" as part of its "finding of whether common issues predominate over individual issues in the context of reliance and the application of fraud-on-the-market theory"). Even in an efficient market, however, not every public misstatement affects a security's share price—only those that are

material are likely to mislead the market and affect market prices in a manner sufficient to warrant a presumption they actually did so. *See In re Burlington Coat Factory Sec. Litig.*, 114 F.3d 1410, 1425 (3d Cir. 1997) (Alito, J.) ("In the context of an 'efficient' market, the concept of materiality translates into information that alters the price of the firm's stock."); *Blackie v. Barrack*, 524 F.2d 891, 906 (9th Cir. 1975) ("Materiality circumstantially establishes the reliance of some market traders and hence the inflation in the stock price . . . .").

Moreover, the role of materiality as a necessary element of the presumption is at least as significant as the efficiency of the market. Reliance may be presumed only as to those misstatements a reasonable investor likely would have viewed as significantly altering the total mix of information in the market. *See Basic*, 485 U.S. at 231-32. "[T]o the extent that information is not important to reasonable investors, it follows that its release will have a negligible effect on the stock price." *Burlington*, 114 F.3d at 1425.[6] Almost by definition, alleged misstatements that are not material cannot move the market price and thus cannot satisfy Rule 23(b)(3)'s fraud-on-the-market assessment.

---

[6] This Court in *Basic* recognized the relationship between materiality and the presumed price distortion: "[I]n an open and developed securities market, the price of a company's stock is determined by the available material information regarding the company and its business . . . ." *Basic*, 485 U.S. at 241; *id.* at 246 n.24 (stating, "we need only believe that market professionals generally consider most publicly announced material statements about companies, thereby affecting stock market prices.").

Evidence bearing on the Rule 23(b)(3) predominance determination includes proof showing the likely absence of any of the fraud-on-the-market elements or "that the misrepresentation in fact did not lead to a distortion of price . . . ." *Basic*, 485 U.S. at 248. For example, a seemingly material misstatement may nevertheless fail to distort the trading price if, through coverage by market analysts, the market is already aware of the truth, and so never misled. *Id.* (noting that where the market is privy to the truth, "the basis for finding that the fraud had been transmitted through market price would be gone."). Similarly, the extent, if any, to which the market price of the security reacts to a disclosure correcting the misstatement is probative of whether the alleged misstatement distorted the market price in the first instance. *See Berks County Employees' Ret. Fund v. First Am. Corp.*, 734 F. Supp. 2d 533, 541 n.52 (S.D.N.Y. 2010) (finding no Rule 23(b)(3) predominance where "'no evidence' that any of the alleged misrepresentations resulted in an 'immediate increase' in First American's stock price and 'no evidence' that any corrective disclosure 'caused an immediate decrease' in stock price").

In addition, a district court's Rule 23 consideration of fraud-on-the-market evidence, including identifying likely corrective disclosures by proof of resulting economic loss, serves the important purpose of identifying the period of trading during which investors could have presumptively relied, thereby defining the class period start and end dates. *See Basic*, at 229 n.5; *In re Fannie Mae Sec. Litig.*, 247 F.R.D. 32, 38 (D.D.C. 2008) ("In determining the duration of a securities fraud class based on a fraud-on-the-market theory, the Court must determine whether 'a curative disclosure had been made so as to

render it unreasonable for an investor, or the market, to continue to be misled by the defendants' alleged misrepresentations.'"). For example, even when an initial price distortion is shown, or presumed, the absence of an economic loss following the alleged corrective disclosure on which the proposed class end date is based suggests a curative event removed any such inflationary effects beforehand. Investors who purchase the security after removal of the inflation do not have access to the presumption of reliance, and, as to them, individualized reliance issues predominate.

Notwithstanding the various fraud-on-the-market issues that can arise at the class certification stage, the Seventh Circuit, in *Schleicher,* treats the efficient market element as the only relevant factor.[7] 618 F.3d at 688 ("The district court assured itself that the market for Conseco's stock was thick enough to transmit defendants' statements to investors by way of the price. That finding supports use of the fraud-on-the-market doctrine as a replacement for individual reading and reliance on defendants' statements."). Petitioner advances the Seventh Circuit's position on the primacy of the efficient market element. *See* Pet. Br. 38 ("The existence of an efficient market establishes a presumption of class-wide reliance . . . ."); *id.* at 40 ("the fraud-on-the-

---

[7] *Schleicher* also concedes the efficient market element usually presents no obstacle to class certification when the issuer is a "large, public company." *See id.* at 681 ("When a large, public company makes statements that are said to be false, securities-fraud litigation regularly proceeds as a class action."). In the district court, respondent Halliburton "d[id] not dispute the efficiency of the market . . . ." *Archdiocese of Milwaukee Supporting Fund, Inc. v. Halliburton, Co.*, 597 F.3d 330, 335 (5th Cir. 2010).

market presumption turns on whether the market is efficient"); *see also* U.S. Br. 10-11.

But *Schleicher*, and the position of the petitioner, are not supported by *Basic* and effectively eviscerate Rule 23(b)(3)'s predominance inquiry in private Rule 10b-5 actions. No serious examination of the fraud-on-the-market presumption as a possible method of showing reliance can overlook the pivotal element of materiality. But that is precisely what *Schleicher* does.

III. Rule 23 Requires A Rigorous Analysis Of The Fraud-On-The-Market Presumption

It is impossible for a district court to ignore evidence calling into question the fraud-on-the-market presumption's viability and still conclude that Rule 23(b)(3)'s predominance requirement is met. *See Gen. Tel. Co. of the Sw. v. Falcon*, 457 U.S. 147, 161 (1982) (reiterating that a class action "may only be certified if the trial court is satisfied, after a rigorous analysis, that the prerequisites of Rule 23(a) have been satisfied"); *see also* FED. R. CIV. P. 23(c)(1)(C) Adv. Comm. Notes 2003 ("A court that is not satisfied that the requirements of Rule 23 have been met should refuse certification until they have been met.").

Because Rule 23 is designed to make sure only cases properly subject to class treatment proceed as class actions, a district court should be afforded discretion to consider any relevant evidence for or against class certification. As the Fourth Circuit reminds us, "[w]e must not lose sight of the fact that when a district court considers whether to certify a class action, it performs the public function of determining whether the representative parties should

be allowed to prosecute the claims of absent class members." *Gariety*, 368 F.3d at 366-67; *id.* at 365-67 (instructing that a district court cannot accept at face value plaintiff's fraud-on-the-market allegations, but, instead, must look beyond the pleadings to conduct the "rigorous analysis").

A district court should also have the power to require the parties to provide whatever information it needs for a "definitive assessment." *In re Initial Public Offering Sec. Litig.*, 471 F.3d 24, 41 (2d Cir. 2006) ("*IPO*"). As the Ninth Circuit has explained, a district court must have "sufficient information to form a reasonable judgment" regarding whether the elements of Rule 23 are met. *Blackie*, 524 F.2d at 901 n.17. "Lacking that, the court may request the parties to supplement the pleadings with sufficient material to allow an informed judgment on each of the Rule's requirements." *Id.*; *see also Teamsters Local 445 Freight Div. Pension Fund v. Bombardier Inc.*, 546 F.3d 196, 204 (2d Cir. 2008) ("We require only that a court 'receive enough evidence, by affidavits, documents, or testimony, to be satisfied that each Rule 23 requirement has been met.'") (citing *IPO*, 471 F.3d at 41).

That the Rule 23(b)(3) analysis may concern liability-related issues (such as materiality) should not diminish a district court's obligation. As this Court has noted, "the class determination generally involves considerations that are enmeshed in the factual and legal issues comprising the plaintiff's cause of action." *Coopers & Lybrand v. Livesay*, 437 U.S. 463, 469 (1978) (superseded on other grounds) (internal quotation marks omitted); *see* FED. R. CIV. P. 23(c)(1)(A) Adv. Comm. Notes 2003 (advising "it is appropriate to conduct controlled discovery into the

merits, limited to those aspects relevant to making the certification decision on an informed basis"). Moreover, an assessment of the presumption's availability is not a merits determination. *See Teamsters Local 445 Freight Div. Pension Fund v. Bombardier, Inc.*, No. 05-1898, 2006 WL 2161887, at *9 (S.D.N.Y. Aug. 1, 2006), *aff'd*, 546 F.3d 196 (2d Cir. 2008). ("[W]hether the plaintiff may take advantage of the presumption of reliance . . . and whether the plaintiff has proven reliance are distinct inquiries.") (emphasis omitted).

Likewise, a district court has considerable flexibility when conducting a Rule 23 analysis to avoid a full-fledged trial. On a class certification motion, the district court makes no formal findings of fact and announces no conclusions on the merits. *Gariety*, 368 F.3d at 365 (Rule 23 findings serve the district court "*only*" in determining whether class certification is appropriate and does not bind a fact finder whose findings on the merits govern the ultimate judgment) (emphasis in original); *Unger v. Amedisys Inc.*, 401 F.3d 316, 323 (5th Cir. 2005) ("the court's determination for class certification purposes may be revised (or wholly rejected) by the ultimate fact-finder"). As the Second Circuit explains: "[A] district judge must be accorded considerable discretion to limit both discovery and the extent of the hearing on Rule 23 requirements. But even with some limits on discovery and the extent of the hearing, the district judge must receive enough evidence, by affidavits, documents, or testimony, to be satisfied that each Rule 23 requirement has been met." *IPO*, 471 F.3d at 41.

Contrary to these fundamental Rule 23 principles, *Schleicher* categorically excludes from the district court's Rule 23 examination evidence bearing on fundamental fraud-on-the-market elements other than the efficient market element. *See Schleicher*, 618 F.3d at 684, 687. *Schleicher* thus undermines the district court's important Rule 23 obligation to ensure that the requirements of Rule 23 are met.

IV. Each Fraud-On-The-Market Element's Susceptibility To Class-Wide Proof Is Not Enough To Justify Rule 23(b)(3) Certification

Whether an alleged misstatement is both material and public is a question common to all class members. So, too, is evidence a defendant may offer to challenge application of the fraud-on-the-market presumption, *e.g.*, proof that severs the link between the alleged misrepresentation and the price. The common nature of the issues and evidence bearing on the viability of the presumption, however, does not itself satisfy the "systemic efficiency" goals of Rule 23(b)(3). *See Amchem Prods., Inc. v. Windsor*, 521 U.S. 591, 615 (1997).[8]

Rather, proof of class-wide Rule 10b-5 reliance hinges on whether the presumption presents a viable method of proof, not on whether each of its separate elements is subject to common proof. In other words,

---

[8] Class action treatment pursuant to Rule 23(b)(3) is "not as clearly called for" as it is in Rule 23(b)(1) and (b)(2) situations. *See Amchem*, 521 U.S. at 615. For this reason, certification under Rule 23(b)(3) warrants a "close look." *Id.* (quoting Benjamin Kaplan, *Continuing Work of the Civil Committee: 1966 Amendments of the Federal Rules of Civil Procedure (I)*, 81 HARV. L. REV. 356, 390 (1967)).

each element's susceptibility to common proof does not reveal whether the plaintiff likely has access to the presumption and, hence, the ability to prove reliance without individualized proof. *In re New Motor Vehicles Canadian Export Antitrust Litig.*, 522 F.3d 6, 25 (1st Cir. 2008) ("Plaintiffs cannot make their case without common proof of causation, and they can only prove causation through common means if their novel theory is viable . . . .").

To answer that question, a district court needs to "formulate some prediction" about the likely availability of the fraud-on-the-market presumption as a proposed method of proof. *See, e.g., In re Hydrogen Peroxide Antitrust Litig.*, 552 F.3d 305, 311 (3d Cir. 2008) (a "district court must formulate some prediction as to how specific issues will play out in order to determine whether common or individual issues predominate in a given case") (internal quotation marks omitted).

Of course, there is always a risk that a plaintiff's proposed method of proof will not pan out. And a district court cannot demand a guaranty from a plaintiff that it will. *See United Steel Workers v. ConocoPhillips*, Co., 593 F.3d 802, 809 (9th Cir. 2010) (holding that a district court cannot insist that it be "assured" that the plaintiff's proposed class-wide method of proof will apply at trial). What is required, however, is at least a reasonable expectation that the presumption will apply based on a sufficient showing of the elements supporting the presumption. Otherwise, if it turns out the presumption fails as a class-wide method of proving reliance at trial, then the "economy and efficiency of class action treatment are lost and the need for judicial supervision and the risk of confusion are magnified." *See Zinser v. Accufix*

Research Inst., Inc., 253 F.3d 1180, 1189 (9th Cir. 2001) (quoting 7A CHARLES ALAN WRIGHT, ARTHUR R. MILLER & MARY K. KANE, FEDERAL PRACTICE AND PROCEDURE § 1778, at 535-39 (2d ed. 1986)); *see also Tardiff v. Knox County*, 365 F.3d 1, 4-5 (1st Cir. 2004) ("[C]lass action machinery is expensive and in our view a court has the power to test disputed premises early on if and when the action would be proper on one premise but not another.").

The Seventh Circuit's opinion in *Schleicher*, however, in effect holds that the fraud-on-the-market elements, including materiality, are always common questions and this alone satisfies Rule 23(b)(3) predominance. *See Schleicher*, 618 F.3d at 685, 687. Petitioner and the United States, as *amici*, adopt this position. *See* Pet. Br. 39-40,49; U.S. Br. 11, 17-19 n.2. This approach is not defensible for the reasons discussed. It transforms a district court's rigorous Rule 23(b)(3) scrutiny into little more than a pro forma exercise and rubber stamp. Under *Schleicher*'s reasoning, a district court in a securities fraud action would not ever need to look behind the pleadings, even to examine an efficient market allegation, because the fraud-on-the-market elements rest entirely on class-wide proof. Not even the petitioner or its *amici*, however, would go that far. *Schleicher*, in effect, endorses at the class certification stage, a motion to dismiss standard that, in violation of Rule 23, accepts the complaint's allegations as true and does not stray beyond its four corners.

V. A Defendant Should Be Afforded An Opportunity To Rebut The Fraud-On-The-Market Presumption Before A Class Is Certified

A defendant can, of course, oppose a class certification motion. To have meaning, however, that opportunity should include showing that the presumption is untenable, for whatever reason, as a class-wide method of proof. In *In re Salomon, supra,* the Second Circuit correctly interprets *Basic* and recognizes that this opportunity to rebut emanates from Rule 23(b)(3) itself. 544 F.3d at 485 ("a successful rebuttal *defeats* certification by defeating the Rule 23(b)(3) predominance requirement . . . . Hence, the court must permit defendants to present their rebuttal arguments before certifying a class . . . .") (emphasis in original) (internal citations and quotation marks omitted).

Consistent with its transcendent duty to ensure Rule 23 requirements are met, a district court should not defer a defendant's opportunity to rebut the factual premises upon which the fraud-on-the-market presumption rests. Nor should it limit the relevant Rule 23(b)(3) evidence a defendant may introduce, except through the exercise of its discretion to control the scope of the class certification proceeding and avoid mini-trials. The "rigorous analysis" a district court must undertake, *Falcon,* 457 U.S. at 161, requires the district court remain receptive to all relevant Rule 23 evidence, regardless of whether a plaintiff or defendant is the proponent.

Basic adopted a rebuttable presumption that allows the defendant to make "[a]ny showing that severs the link between the alleged misrepresentation and either the price received (or paid) . . . ."

Basic, 485 U.S. at 248. The contention that footnote 29 in *Basic* defers any inquiry into rebuttal evidence until after class certification is not well founded. To be sure, in *Basic*, this Court stated that possible rebuttal proof in that case "is a matter for trial," at which time the district court could amend the certification order if needed. *See id.* at 249 n.29.

But footnote 29 does not state that rebuttal proof is *only* a matter for trial. Footnote 29 responds to potential difficulties plaintiffs in *Basic* might have in ultimately prevailing on a fraud-on-the-market theory given the "incongruity" and "oddities" in the case, a concern raised by the dissenting opinion. *See id.* at 249 n.29; *see also id.* at 260-62 (White, J., dissenting). But any rebuttal is speculative; no actual rebuttal proof is cited and so the majority states that it "see[s] no need to engage in the kind of factual analysis the dissent suggests . . . ." *Id.* at 249 n.29. Hence this Court concludes: "The District Court's certification of the class here was appropriate when made but is subject on remand to such adjustment, if any, as developing circumstances demand." *Id.* at 250. Common sense suggests that evidence that can defeat the presumption after a class is certified can also defeat the presumption before certification.

As this Court acknowledged, the court of appeals in *Basic* included in its description of rebuttal proof evidence that "rebut[s] . . . the elements giving rise to the presumption, or show that the misrepresentation in fact did not lead to a distortion of price . . . ." *Id.* at 248. This should include, for example, the opportunity to introduce analyst reports and other public materials showing either that, at the time of the alleged misstatement, the market already was

aware of information allegedly misstated or concealed, or that the market became aware of the truth before the alleged corrective disclosure date. A district court can easily and readily determine from such proof that the fraud-on-the-market presumption will not be available to show reliance for all or part of the class period. Rebuttal proof is particularly useful when plaintiff's proposed class period start and end dates are arbitrary and designed to increase defendant's potential exposure. *See id.* at 229 n.5.

Consistent with this interpretation of *Basic*, the Second Circuit recognizes a defendant's right to offer evidence rebutting the fraud-on-the-market presumption, on grounds other than market efficiency, at the class certification stage. *See In re Salomon*, 544 F.3d at 485. The Second Circuit is correct. *Basic*'s fraud-on-the-market presumption is a judicial response to the class certification barrier presented by individualized proof of reliance in a securities fraud case, "[a]rising out of considerations of fairness, public policy, and probability, as well as judicial economy . . . ." *Basic*, 485 U.S. at 245. Denying a rebuttal opportunity at the class certification stage contravenes the presumption's objective because it is at that stage when the district court must form a reasonable judgment about the presumption's availability as a class-wide method of proof. Indeed, there is no more appropriate time than on a motion for class certification to consider information bearing on such availability. *See In re DVI, Inc. Sec. Litig.*, Nos. 08-8033 & 08-8045, slip op. at 31 (3d Cir. Mar. 29, 2011) ("[W]e believe rebuttal of the presumption of reliance falls within the ambit of issues that, if

relevant, should be addressed by district courts at the class certification stage.").[9]

Any other approach would unfairly prejudice defendants in Rule 10b-5 class actions. Because a class certification order significantly raises the stakes and the costs of litigating, any later-stage opportunity to rebut comes only after a dramatic change in the dynamics of the case. *See Hydrogen Peroxide*, 552 F.3d at 310 (noting "pivotal status of class certification in large-scale litigation" and "decisive effect" certification decisions have irrespective of the merits); FED. R. CIV. P. 23(f) Adv. Comm. Notes 1998 ("An order granting certification . . . may force a defendant to settle rather than incur the costs of defending a class action and run the risk of potentially ruinous liability.").

As a matter of policy, deciding potentially dispositive issues in putative class actions as early as practicable is favored. *See Bell Atlantic Corp. v. Twombly*, 550 U.S. 544, 558-59 (2007). At the class certification stage, the prohibitive costs of litigating a certified class action still await. One study concludes that "the vast majority of certified class actions settle, most soon after certification." Robert G. Bone

---

[9] The class certification stage is a judicially convenient stage to consider rebuttal proof. Plaintiffs, for example, often employ event studies to show the market is efficient. These studies explore whether new information correlates with price movements and include a review of analyst reports, press releases and securities filings, among other public information about the issuer. Hence, potential rebuttal information showing the allegedly misstated or withheld information is not new information and, therefore, not material. It may already be before the district court via public information that plaintiff's own event study relies on at the class certification stage.

& David S. Evans, *Class Certification and the Substantive Merits*, 51 DUKE L.J. 1251, 1291 (2002). To the extent considering rebuttal evidence may result in a case not proceeding as a class action, consideration of such evidence at the class certification stage is consistent with public policy.

The absence of a class-certification-stage rebuttal opportunity would be acutely detrimental to PhRMA's member companies who operate in an environment where success is arduous and expensive, and potentially high securities litigation defense costs only further raise the barrier to entry. Many of the characteristics that make success in the pharmaceutical and biotechnology industries difficult also explain why such companies are particularly susceptible to securities fraud suits. Most new drugs do not produce a profit. *See* PhRMA, *Pharmaceutical Industry Profile 2010*, at 11 (Washington, DC: PhRMA March 2010) ("Industry Profile"), at http://www.phrma.org/sites/default/files/159/profile_2010_final.pdf ("Just 2 in 10 Approved Medicines Recoup R&D Costs.").[10] And, each time a drug fails to reach expectations, an enterprising plaintiff's attorney will scour the record of public statements in search of anything that, in retrospect, may suggest the possibility of a misrepresentation. Companies may be less likely to undertake the risk of developing new

---

[10] Furthermore, recent estimates place the average costs of developing new drugs between $800 million and $1.3 billion. *See* Congressional Budget Office, *Research and Development in the Pharmaceutical Industry*, at 2 (Oct. 2006) ("CBO Report"), at www.cbo.gov/ftpdocs/76xx/doc7615/10-02-DrugR-D.pdf; Industry Profile at 27. From research and development to regulatory approval, the process takes approximately 12 years to complete. CBO Report at 2.

treatments—like those that PhRMA members are currently developing for cancer, cardiovascular disease, and HIV/AIDS (*id.* at 3-4)—when even approved drugs face continued uncertainty imposed by settlement-driven suits that, once a class is certified, generate potentially ruinous legal expenses.

Moreover, PhRMA's member companies are unique in that information concerning the development and testing of new medicines and therapeutics is made transparent through FDA regulations and procedures. In effect, there is a constant, ongoing public debate over the success or failure of such products. This debate is further reflected in reports of securities analysts who closely follow these public developments. Where alleged misstatements and omissions concern FDA-regulated drugs, prohibiting an opportunity to show the market's awareness of the allegedly withheld or misstated information (and thus the absence of materiality as a basis for the fraud-on-the-market presumption) is particularly detrimental.

Notably, the Seventh Circuit's position in *Schleicher* effectively bars an opportunity to oppose application of the fraud-on-the-market presumption using facts or arguments common to the class. That result would prevent a district court from considering materiality, rebuttal evidence or even from setting the beginning and end dates of the class period, an exercise that rests on considerations such as when the truth likely entered the market and, thus, the availability of the fraud-on-the-market presumption during all or portions of the class period. *See* Section II., *supra*. *Schleicher* is contrary to Rule 23(b)(3), *Basic*, and *In re Salomon*, and should be rejected.

VI. Evidence Of Price Impact Is Proper At The Class Certification Stage

When sufficient doubt exists about the viability of the fraud-on-the-market presumption for purposes of satisfying Rule 23(b)(3), a district court should have the authority, *sua sponte*, to insist upon a greater showing before certifying a class, including a showing effectively requiring the plaintiff to come forward in the first instance with proof of price impact or economic loss related to the alleged misstatement. At a minimum, a district court should be permitted to consider defendant's rebuttal proof that severs the link between the alleged misstatement and the price. That is the rule in *Basic* and the Second Circuit. *Basic*, 485 U.S. at 248; *In re Salomon*, 544 F.3d at 483-85.

Although petitioner depicts the Fifth Circuit as imposing a loss causation rule at odds with the Second Circuit [Pet. Br. 24, 30], any distinction is procedural. The Fifth Circuit requires that a plaintiff show price impact. *Oscar Private Equity Investments v. Allegiance Telecom, Inc.*, 487 F.3d 261, 269 (5th Cir. 2007); *Alaska Elec. Pension Fund v. Flowserve Corp.*, 572 F.3d 221, 229 (5th Cir. 2009) (per curiam; panel including O'Connor, J.). In the Second Circuit, a plaintiff's Rule 23(b)(3) showing must include a public, material misrepresentation about stock traded in an efficient market, and that the plaintiff traded the shares between the time the misrepresentation was made and the time the truth was revealed. *In re Salomon*, 544 F.3d at 481, 481 n.4. If it does, a defendant in the Second Circuit may, also pursuant to Rule 23(b)(3), rebut the presumption by making any showing that severs the link between the alleged misrepresentation and the price, including

"by showing, for example, the absence of a price impact." *Id.* at 484[11]; *see In re DVI, Inc. Sec. Litig.*, Nos. 08-8033 & 08-8045, slip op. at 31-32 (3d Cir. Mar. 29, 2011) ("[W]e agree with the Second Circuit that a defendant's successful rebuttal demonstrating that misleading material statements or corrective disclosures did not affect the market price of the security defeats the presumption of reliance for the entire class, thereby defeating the Rule 23(b) predominance requirement.").

Accordingly, whether it is the plaintiff seeking to prove price impact to establish class-wide reliance (as in the Fifth Circuit) *or* the defendant showing the absence of price impact to rebut the fraud-on-the-market presumption (as in the Second Circuit), plaintiffs and defendants will introduce evidence when that issue calls into question plaintiff's proposed use of the fraud-on-the-market presumption at trial. As a practical matter, under either circuit's approach, the district court will then look at the evidence presented to determine whether Rule 23(b)(3) is met.

---

[11] *See also In re Salomon*, 544 F.3d at 486 n.9 ("By contrast, we hold that plaintiffs must show that the statement is material (a prima facie showing will not suffice). However, once that is done, the burden shifts to the defense to show that the allegedly false or misleading material statements did *not* measurably impact the market price of the security.")

CONCLUSION

The decision of the court of appeals should be affirmed.

Respectfully submitted,

INTEREST OF *AMICUS CURIAE*

Public Justice, P.C. ("Public Justice") is a national public interest law firm dedicated to pursuing justice for the victims of corporate and government abuses. Public Justice concentrates its efforts on precedent-setting and socially significant individual and class action litigation designed to advance civil rights, civil liberties, consumer rights, workers' rights, the preservation of the civil justice system, and the protection of the poor and underrepresented. Public Justice regularly represents plaintiffs in class actions. Its experience is that the class action device often is the only meaningful way that individuals can vindicate important legal rights. Public Justice believes that the decision below, if affirmed, will unduly restrict securities class actions and weaken the only remedial mechanism available for large numbers of individuals who have each suffered a small monetary harm as a result of corporate misconduct.[1]

---

[1] *Amicus*, by its counsel, is the sole author of this brief. No one other than *amicus* or its members made a monetary contribution to its preparation or submission. The parties have filed letters giving blanket consent to the filing of *amicus* briefs in this case.

STATEMENT

On June 3, 2002, Petitioner (plaintiff below), on behalf of itself and those similarly situated, filed its initial complaint. On April 4, 2006, plaintiff submitted a Fourth Amended Complaint, asserting claims against Respondents, the defendants Halliburton Co. and David J. Lesar (its former president and chief operating officer), for intentionally misstating Halliburton Co.'s financial results and financial condition in violation of Sections 10(b) and 20(a) of the Securities Exchange Act of 1934 (as amended), 15 U.S.C. §§ 78j, 78t, and SEC Rule 10b-5, 17 C.F.R. § 240.10b-5. On March 28, 2007, the district court denied defendants' motion to dismiss and subsequently their motion for reconsideration in light of *Tellabs, Inc. v. Makor Issues & Rights, Ltd.*, 551 U.S. 308 (2007).

On September 17, 2007, Petitioner moved for class certification. On November 4, 2008, the district court denied class certification, finding that plaintiff had not proven loss causation by a preponderance of the evidence. *See Archdiocese of Milwaukee Supporting Fund, Inc. v. Halliburton Co.*, No. 3:02-CV-1152-M, 2008 WL 4791492 (N.D. Tex. Nov. 4, 2008) (citing *Oscar Private Equity Invs. v. Allegiance Telecom, Inc.*, 487 F.3d 261, 265 (5th Cir. 2007)). Plaintiff petitioned for interlocutory review of the district court's class decision pursuant to Rule 23(f) of the Federal Rules of Civil Procedure, which petition was accepted by the United States Court of Appeals for the Fifth Circuit ("Fifth Circuit").

Addressing plaintiff's arguments that it need not prove loss causation in order to invoke the presumption of reliance for class certification,

the Fifth Circuit held itself to be bound to apply *Oscar, supra*, and implemented that holding on loss causation without further analysis[2]:

> Plaintiff contends that our precedent, specifically the requirement of *Oscar Private Equity Investments v. Allegiance Telecom, Inc.*, 487 F.3d 261, 269 (5th Cir. 2007), that class plaintiffs prove loss causation at the class certification stage, is contrary to Supreme Court and sister circuit precedent. Plaintiff may not assail *Oscar* as wrongly decided, as we are bound by the panel decision. *See Soc'y of Separationists, Inc. v. Herman*, 939 F.2d 1207, 1211 (5th Cir. 1991) ("In this circuit, one panel may not overrule the decision, right or wrong, of a prior panel in the absence of an intervening contrary or superseding decision by the court *en banc* or the Supreme Court.").

See Archdiocese of Milwaukee Supporting Fund, Inc. v. Halliburton Co., 597 F.3d 330, 334 n.2 (5th Cir. 2010).

---

[2] No petition for certiorari was filed in *Oscar*.

SUMMARY OF ARGUMENT

The Fifth Circuit's holdings in both this case, *Archdiocese of Milwaukee Supporting Fund, Inc. v. Halliburton Co.*, 597 F.3d 330 (5th Cir. 2010)("*Halliburton*"), and in *Oscar Private Equity Investments v. Allegiance Telecom, Inc.*, 487 F.3d 261 (5th Cir. 2007), reject the common-sense and long accepted principle that the market prices of securities reflect and react to publicly available information about those securities and their issuers. 597 F.3d at 334-35; 487 F.3d at 268-70. These decisions thus clash with the federal securities laws, Congress's intent in enacting them, and contemporaneous academic analysis and commentary concerning the basis for their enactment. When enacting the federal securities laws in the 1930's, Congress understood that the market prices of securities generally reflect and react to publicly available information about those securities and their issuers, that this mechanism is not always perfect or instantaneous, and that investors rely on the integrity of market prices in making their investment decisions.

The Fifth Circuit rejected this common-sense proposition as "unfounded, at least as market efficiency is presently measured," based on certain critiques of the efficient market hypothesis. *See Oscar*, 487 F.3d at 269-70. Respectfully, the Fifth Circuit's reasoning does not justify either its restriction of the presumption of reliance or its narrowing of the fraud-on-the-market doctrine. First, the presumption of reliance and the fraud-on-the-market doctrine implement congressional policy as embodied in the federal securities laws, which policy remains

vital in the present era, not the efficient market hypothesis as various economists have articulated it at various times. Changes in economists' understanding of the efficient market hypothesis, or their qualifications of that theory in light of varying empirical findings, do not change congressional policy.

Second, any purported evolution in the understanding of the efficient market hypothesis is not grounds to alter the presumption of reliance. This Court's decision in *Basic, Inc. v. Levinson* adopting the presumption of reliance was grounded on congressional policy and *not* on economic scholarship regarding the efficient market hypothesis. *See* 485 U.S. 224, 245-46 (1988).

Third, the academic debates concerning the efficient market hypothesis have not changed materially since this Court's decision in *Basic* – the debates and critiques concerning the efficient market hypothesis started twenty years before this Court decided *Basic* and continued after. The positions in that debate were established, and their merits evaluated, long before this Court issued that decision. This Court was aware of that debate when it decided *Basic*. The continuing debate is thus not reason to revisit or narrow *Basic*'s presumption of reliance.

Because the Fifth Circuit's holding departs from the letter and intent of the federal securities laws, the decision of the Court of Appeals should be reversed.

ARGUMENT

I. THE FIFTH CIRCUIT RENOUNCED VITAL AND FUNDAMENTAL CONGRESSIONAL POLICIES AS EMBODIED IN THE FEDERAL SECURITIES LAWS.

A. THE FIFTH CIRCUIT REJECTED, OR GRAVELY LIMITED, THE LONG-RECOGNIZED UNDERSTANDING THAT MATERIAL MISREPRESENTATIONS MOVE MARKET PRICES FOR SECURITIES.

The rationale for the decisions in both *Halliburton* and *Oscar* contravenes a basic premise of the federal securities laws: namely that securities' prices generally reflect publicly available information (both accurate and inaccurate) concerning them and respond to changes in that information, which changes can and do include the revelation that prior material statements concerning the issuers' business or finances were false or misleading. In *Oscar* (which *Halliburton* held controlling and followed), the Fifth Circuit rejected this principle, *see* 487 F.3d at 268-70; 597 F.3d at 334 n.2, frustrating the congressional purpose of the federal securities laws.

Specifically, in *Oscar*, 487 F.3d at 268-70, the Fifth Circuit required securities plaintiffs seeking class certification to demonstrate loss causation – that is, to show that disclosure of corrective information "moved" the subject security's price – to trigger the fraud-on-the-

market doctrine and to allow a class of purchasers to be certified. In imposing this requirement at class certification, the Court of Appeals renounced the enduring congressional understanding that the prices of securities trading on the market reflect publicly available information (and misinformation) and changes therin as "unfounded, at least as market efficiency is presently measured."[3] In so ruling, however, the

---

[3] The Court of Appeals explained itself in full in *Oscar* as follows, *id.* at 269-70 (footnotes omitted):

> The assumption that every material misrepresentation will move a stock in an efficient market is unfounded, at least as market efficiency is presently measured. There are two additional explanations, besides immateriality, for why a misrepresentation might fail to affect the stock price, both relevant to classwide reliance. First, it might be that even though the market for the defendant's shares has been demonstrated efficient by the usual indicia, the market is actually inefficient with respect to the particular type of information conveyed by the material misrepresentation, *i.e.*, analysts and market makers do poorly at digesting line-count information. Thus our approach gives effect to information-type inefficiencies, recognizing that "the market price of a security will not be uniformly efficient as to all types of information." A second possible explanation for a misrepresentation's failure to move the market is that the market was

Fifth Circuit rejected the congressional policy embedded in the federal securities laws and frustrated its legislative purpose.

B. THE FEDERAL SECURITIES LAWS EMBODY THE PRINCIPLES OF THE FRAUD-ON-THE-MARKET DOCTRINE.

In the 1930's, when it enacted the federal securities laws, Congress well understood (a) that market prices for securities reflected publicly available information and misinformation about those securities, (b) that misinformation concerning securities could artificially inflate or depress their prices, and (c) that the correction of misinformation would usually affect securities prices in the market. Congress also was aware that securities markets could be flawed and thus would not necessarily react perfectly or

---

strong-form efficient with respect to that type of information, *i.e.*, due to insider trading, the restated line count was reflected by the stock price well before the 4Q01 corrective disclosure. Both explanations resist application of the semi-strong efficient-market hypothesis, the theory on which the presumption of classwide reliance depends. This court honors both theory and precedent in requiring plaintiffs to demonstrate loss causation before triggering the presumption of reliance. The trial court erred in ruling that the class certification stage is not the proper time for defendants to rebut lead Plaintiffs' fraud-on-the-market presumption.

instantaneously to changes in publicly available information. Cognizant of both the strengths and limits of securities markets, Congress encoded the basic premise that markets respond to public information (and misinformation) throughout the federal securities laws, endorsing as a basic premise the notion that correct and accurate information would create a market with correct and accurate pricing and that misrepresentations could work frauds on the market as a whole. Respected commentary from the period of the securities laws' enactment provides further evidence that the laws were understood to incorporate this notion.

For example, in the legislative history of the Securities Act of 1933 (the "Securities Act"), Congress explicitly recognized that an issuer's statements about a security determine the price of that security and are thus relied on by an investor, even if an investor is unaware of the statements:

> The statements for which they are responsible, although they may never actually have been seen by the prospective purchaser, because of their wide dissemination, determine the market price of the security, which in the last analysis reflects those manifold causes that are the impelling motive of the particular purchase. The connection between the statements made and the purchase of the security is clear, and, for this reason, it is the essence of fairness to insist upon the assumption of responsibility for the making of these statements.

H.R. Rep. No. 85, 73d Cong., 1st Sess. (1933).

Likewise, the legislative history of the Securities Exchange Act of 1934 (the "Exchange Act") reflects that market price is an equilibrium price determined by the activities of buyers and sellers in an open market with access to full and complete information about a security, that misrepresentation skews that equilibrium price, and that information eventually – even if not instantaneously – works its way into market price:

> No investor, no speculator, can safely buy and sell securities upon the exchanges without having an intelligent basis for forming his judgment as to the value of the securities he buys or sells. The idea of a free and open public market is built upon the theory that competing judgments of buyers and sellers as to the fair price of a security brings about a situation where the market price reflects as nearly as possible a just price. Just as artificial manipulation tends to upset the true function of an open market, so the hiding and secreting of important information obstructs the operation of the markets as indices of real value. There cannot be honest markets without honest publicity. Manipulation and dishonest practices of the market place thrive upon mystery and secrecy. The disclosure of information materially important to investors *may not instantaneously be reflected in market value,* but despite the intricacies of security values truth does find relatively quick acceptance on the market.

H.R. Rep. No. 1382, 73d Cong., 2nd Sess. (1934) (emphasis added). The 1932-34 Senate Banking and Currency Committee investigation (known as

the Pecora Hearings) provided Congress with ample illustration of schemes where financial disclosures were manipulated for the purpose of defrauding the market, having an unquestionable impact on market prices. 1 Louis Loss, Joel Seligman & Troy Paredes, *Securities Regulation* 301-03 (4th ed. 2006). Congress sought to correct such abuses with the federal securities laws.

Congress, having witnessed the spectacular run up in the stock market and its collapse,[4] certainly understood that prices in financial markets sometimes inaccurately valued securities. Nonetheless, when framing the federal securities laws, Congress placed strong emphasis on the dissemination of accurate market information and recognized that the information would be encoded in market prices.

---

[4] The Seventy-Third Congress took office in the wake of the most profound market crash in United States, if not world, history. Preceding that crash was an astonishing stock market bubble from 1927 through September 1929, one of the ten largest economic bubbles in history. *See* Charles P. Kindleberger & Robert Aliber, *Manias, Panics, and Crashes: A History of Financial Crises* 9 (5th ed. 2005). During that period, the Dow Jones Industrial Average rose from approximately 155 on January 3, 1927 to peak at 381.17 on September 3, 1929, before collapsing to 198.69 by November 13, 1929, and ultimately reaching a nadir of 41.22 in July 8, 1932, an 89.19% decline from its 1929 high.

Prominent commentators, writing at the time the Securities Act and Exchange Act were enacted, were familiar with the concept that market prices encode information. In 1931, Adolf Berle, surveying United States securities law, recognized that (a) publicly available information about securities must be accurate because it impacts market prices and (b) courts were imposing liability based on the fraud-on-the-market doctrine, even if that doctrine was not yet known by that name:

> [A] free market contemplates appraisal of the value of the stock by both buyer and seller. *Appraisal is necessarily on the basis of information.* Accordingly, *all markets move in a nexus of information gathered from all sources* and circulated in a variety of ways, recognized and unrecognized. ... Most of the information circulated, however, and that dealt with here, is information relating to a specific stock, and designed to bear upon the value of that stock. *It seems to be an established rule of law that any statement of any kind issued by anyone and intended to affect the price of, or to be used in appraising a security must be accurate; and that the knowing publisher of false information is liable in an action of fraud to anyone who relies on it, or, probably, even to anyone who acts to his loss in the open market on a false valuation as a result of such statement.*

Adolf A. Berle, *Liability for Stock Manipulation*, 31 Colum. L. Rev. 263, 268 (1931) (emphasis added; footnote omitted) (citing *Stewart v. Joyce*, 201 Mass. 301, 87 N.E. 613 (1909); *Kilgore v. Bruce*, 166 Mass. 136, 44 N.E. 108 (1896)). Addressing

liability to purchasers for false statements, Berle was even more explicit:

> *Is it necessary that the purchaser knows of the specific false statement? Probably not*; the only decision on the point indicates that where the effect of the statement was to create a false valuation or appraisal by the entire market, and the buyer relied upon the state of the market, he had, at second hand as it were, relied on the statement itself. The chain of causation between the statement relied upon and price adopted by the investor is slightly longer than in the ordinary case of deceit, but is no less direct. If the X corporation states that its earnings are $13 a share when, in fact, its income statement should really show a loss, and the market estimates the value of the stock at $130 on the basis of such statement, and *the investor buys at the market price, he has relied on the market situation, which in turn resulted from the false statement.*

Id. at 269-70 (emphasis added; footnote omitted) (citing *Ottinger v. Bennett*, 203 N.Y. 554, 96 N.E. 1124 (1911); *Bedford v Bagshaw*, 4 H. & N. 538, 157 Eng. Rep. 951 (Exch. 1859)).

Then-professor William O. Douglas, who was intimately associated with the drafting of the Securities Act, similarly understood the Act to be premised on the vital importance of public information to the market prices for securities. As he wrote for a general audience in the Yale Review in early 1934:

> The truth about securities having been told, the matter is left to the investor. The Act presupposes that the glaring light of

> publicity will give the investors needed protection. But those needing investment guidance will receive small comfort from the balance sheets, contracts, or compilation of other data revealed in the registration statement. They either lack the training or the intelligence to assimilate them and find them useful, or are so concerned with a speculative profit as to consider them irrelevant. And wise and conservative investors will find the Securities Act useful but not necessary and from it will gain but little real protection against an occasional Kreuger or Insull. This means that the results of the Act so far as investors are concerned are primarily twofold: (1) the requirement that the truth about securities be told will in and of itself prevent some fraudulent transactions which cannot stand the scrutiny of publicity; (2) even though an investor has neither the time, money, nor intelligence to assimilate the mass of information in the registration statement, there will be those who can and who will do so, whenever there is a broad market. The judgment of those experts will be reflected in the market price. Through them investors who seek advice will be able to obtain it. And so during the early months of the life of a security the registration statement will serve as a healthy conditioner of the market.

William O. Douglas, *Protecting the Investor*, 23 Yale Rev. 522, 523-24 (1934).

In writing about the Exchange Act, James William Moore and Frank Wiseman similarly recognized the pervasive relevance of available

issuer information to share pricing and the need for comprehensive disclosure to promote accurate pricing:

> [T]ransactions on the exchange affect not only the securities there handled, but serve as a yardstick to measure the tremendous immobile holdings of like securities throughout the country. Proper attention to pricing is therefore essential. Before market quotations can be accepted as an accurate appraisal of a security, the market must be free and open, both in the sense of liquidity – the continuous operations of buyers and sellers, and in the sense that price is honestly chancered. To effect the latter, buyers and sellers must have adequate financial information and the opportunity to trade on an unrigged market.

James William Moore and Frank M. Wiseman, *Market Manipulation and the Exchange Act*, 2 U. Chi. L. Rev. 46, 48 (1934) (certain footnotes omitted). In footnote 12 (*see id.* at 48 n.12), the authors continued,

> In appraising values, information is needed on at least general business conditions; the condition of the industry involving the particular security; the financial record of the company and perhaps of other like companies for comparative purposes; and the demand for, and the resulting price of, the security.

In recognition of its understanding of markets and the role of public information in

them, Congress adopted numerous disclosure requirements and penalties for false statements in 1933 and 1934.[5]

In sum, the proposition that "material misrepresentation[s] will move a stock in an efficient market" is a common-sense principle that guided Congress in the design of the federal securities laws and was incorporated by Congress into the structure of those laws. Equally, Congress was aware that this generalization had its exceptions and that securities prices did not always react instantaneously or perfectly to public information. In rejecting the principle that material misrepresentations can be presumed to move prices of securities that trade on open and well-developed markets, the Fifth Circuit has contravened the congressional understanding of the securities markets and frustrated its regulation of them.

II. IN *BASIC, INC. V. LEVINSON* THIS COURT IMPLEMENTED CONGRESSIONAL POLICY WHEN IT ACCEPTED THE PRESUMPTION OF RELIANCE.

Starting with *Kardon v. National Gypsum Co.* in 1946, the federal courts embraced private rights of action under Section 10(b) and SEC Rule 10b-5 as implementing congressional policy in the federal securities law. *See* 69 F. Supp. 512 (E.D. Pa. 1946). Subsequently, the Courts of Appeals uniformly endorsed the presumption of reliance

---

[5] *See, e.g.*, 15 U.S.C. §§ 77g, 77h, 77k, 77*l*, 77q, 78f(b)(5), 78f(f), 78j, 78*l*, 78m, 78p.

and the fraud-on-the-market doctrine in the 1970's and early 1980's as a further implementation of the congressional objectives embedded in the federal securities laws. These courts held that plaintiffs would be entitled to a presumption of reliance (*i.e.*, transaction causation) whenever the defendant made false statements in connection with securities that traded in a developed, impersonal market. *See, e.g., Peil v. Speiser*, 806 F.2d 1154, 1161 (3d Cir. 1986) ("plaintiffs who purchase in an open and developed market need not prove direct reliance on defendants' misrepresentations, but can satisfy their burden of proof on the element of causation by showing that the defendants made material misrepresentations") (footnote omitted); *Harris v. Union Elec. Co.*, 787 F.2d 355, 367 & n.9 (8th Cir. 1986) ("False or misleading information, such as that involved in this case, can actually harm investors directly – through actual reliance, or indirectly – by affecting the market upon which the investor relied and traded."); *Blackie v. Barrack*, 524 F.2d 891, 905-08 (9th Cir. 1975) ("causation is adequately established in the impersonal stock exchange context by proof of purchase and of the materiality of misrepresentations").[6]

---

[6] *See also Lipton v. Documation, Inc.*, 734 F.2d 740 (11th Cir. 1984); *T.J. Raney & Sons, Inc. v. Fort Cobb Irrigation Fuel Auth.*, 717 F.2d 1330, 1332-33 (10th Cir. 1983), *Panzirer v. Wolf*, 663 F.2d 365, 367-68 (2d Cir. 1981), *vacated and remanded on other grounds sub nom. Price Waterhouse v. Panzirer*, 459 U.S. 1027 (1982);

In 1988, in *Basic, Inc. v. Levinson*, 485 U.S. 224, 245-46 (1988), this Court itself adopted the presumption of reliance because that presumption was "consistent with" and "support[ed]" the "congressional policy embedded in the 1934 Act." 485 U.S. at 245. The Court specifically noted that "[i]n drafting that Act, Congress expressly relied on the premise that securities markets are affected by information, and enacted legislation to facilitate an investor's reliance on the integrity of those markets." *Id.* at 245-46.

The Court found additional support for adopting the presumption of reliance in "common sense and probability," *id.* at 246, and found it wholly improbable that investors would not rely on the integrity of market prices for securities. *See id.* at 246-47 ("It has been noted that 'it is hard to imagine that there ever is a buyer or seller who does not rely on market integrity. Who would knowingly roll the dice in a crooked crap game?'") (quoting *Schlanger v. Four-Phase Sys. Inc.*, 555 F. Supp. 535, 538 (S.D.N.Y. 1982)).

Finally, the Court also relied on the universal endorsement of the presumption of reliance in the Courts of Appeals. *Id.* at 247 & n.25 (collecting cases).

The *Basic* Court also drew support from economic research. *See id.* The efficient market hypothesis, as a technical economic theory about the way in which financial markets work, was first formulated in the 1960's in various articles by

---

Ross v. A.H. Robins Co., 607 F.2d 545, 553 (2d Cir. 1979).

Eugene Fama,[7] culminating in a 1970 article in the *Journal of Finance*.[8] The economic statement of the efficient market hypothesis was almost immediately subject to theoretical critiques and empirical challenges, which continued in the twenty years prior to this Court's decision in *Basic*.[9]

---

[7] *See, e.g.*, Eugene Fama, *et al.*, *The Adjustment of Stock Prices to New Information*, 10 Int'l Econ. Rev. 1 (1969); Eugene Fama, *Risk, Return and Equilibrium*, Rep. No. 6831, Univ. Chi. Ctr. for Math. Studies in Bus. & Econ. (1968); Eugene Fama and Marshall Blume, *Filter Rules and Stock Market Trading* Profits, 39 J. Bus. 226 (1966); Eugene Fama, *The Behavior of Stock Market Prices*, 38 J. Bus. 34 (1965).

The intuition that public information is relevant to the pricing of securities in the financial markets was known decades before Dr. Fama began his investigations. *See, e.g.*, Berle, *supra*.

[8] *See* Eugene Fama, *Efficient Capital Markets: A Review of Theory and Empirical Work*, 25 J. Fin. 383 (1970).

[9] *See, e.g.*, Barr Rosenberg, Kenneth Reid, & Ronald Lanstein, *Persuasive Evidence of Market Inefficiency*, J. Portfolio Management, Spr. 1985, at 9; Ronald J. Gilson & Reinier H. Kraakman, *Mechanisms of Market Efficiency*, 70 Va. L. Rev. 549 (1984); Sanford J. Grossman & Joseph E. Stiglitz, *On the Impossibility of Informationally Efficient Markets*, 70 Am. Econ. Rev. 393 (1980); Sanjoy Basu, *Investment Performance of Common Stocks in Relation to Their Price-Earnings Ratios: A*

This Court cited such research in support of its recognition that public statements affect prices. However, although noting that "[r]ecent empirical studies have tended to confirm Congress's premise that the market price of shares traded on well-developed markets reflects all publicly available information, and, hence, any material misrepresentations," this Court expressly *disavowed* basing its holding on the vagaries of economic research:

> We need not determine by adjudication what economists and social scientists have debated through the use of sophisticated statistical analysis and the application of economic theory. For purposes of accepting the presumption of reliance in this case, we need only believe that market professionals generally consider most publicly announced material statements about companies, thereby affecting stock market prices.

Id. at 246 n.24. This Court, in *Basic*, was thus aware of the critiques of the efficient market hypothesis. *See also id.* at 253 & n.4 (White, J., dissenting) (discussing various critiques).

Basic endorsed the fraud-on-the-market presumption notwithstanding these criticisms. An accurate reading of *Basic* thus reveals that

---

Test of the Efficient Markets Hypothesis, 32 J. Fin. 663 (1977); Francis Nicholson, *Price-Earnings Ratios in Relation to Investment Results*, 24 Fin. Analysts J. 105 (1968); Ray Ball & Philip Brown, *An Empirical Evaluation of Accounting Income Numbers*, 6 J. Acct. Res. 159 (1968).

this Court neither adopted the efficient market hypothesis, as it is formulated in the economic and financial literature, nor relied on that academic literature in adopting the presumption of reliance or endorsing the fraud-on-the-market doctrine.

Accordingly, neither the fraud-on-the-market doctrine nor the presumption of reliance are restatements of economic theory or research concerning market efficiency. They are legal principles concerning what allegedly defrauded purchasers (or sellers) of a security need prove in order to establish, at trial, his or her reliance on a misrepresentation (or omission) concerning a security. These legal principles serve to implement congressional purpose, not to encapsulate current social science. "Presumptions typically serve to assist courts in managing circumstances in which direct proof, for one reason or another, is rendered difficult." *Basic*, 485 U.S. at 245.

III. CONGRESS EMBRACED THE FRAUD-ON-THE-MARKET DOCTRINE AND THE PRESUMPTION OF RELIANCE WHEN AMENDING THE FEDERAL SECURITIES LAWS AFTER *BASIC*.

Congress has extensively amended the securities laws in regard to private actions three times since *Basic*, and twice specifically addressed the subject of class action litigation under the federal securities laws. Each time, Congress has not chosen to alter the presumption of reliance. Indeed, in 1995, Congress reformulated the measure of plaintiffs' damages for securities fraud, on the premise that market prices for securities eventually react correctly to changing

disclosures of material information, albeit neither perfectly nor instantaneously.

In 1995, Congress enacted the Private Securities Litigation Reform Act ("PSLRA"). *See* Pub. L. No. 104-67, 109 Stat. 737, codified in pertinent part at 15 U.S.C. § 77z-1 and 15 U.S.C. § 78u-4, *et seq.* Significantly, Congress enacted a damages limitation in the PSLRA explicitly premised on the notion that markets generally – but not *perfectly* – incorporate public information. Specifically, the provision states:

> the award of damages to the plaintiff shall not exceed the difference between the purchase or sale price paid or received, as appropriate, by the plaintiff for the subject security and the mean trading price of that security during the 90-day period beginning on the date on which the information correcting the misstatement or omission that is the basis for the action is disseminated to the market.

15 U.S.C. § 78u-4(e)(1). This provision adopted the premise that when corrective information is released publicly, market prices correct themselves. This provision also recognizes, in its use of the 90-day average, that market reaction may be neither instantaneous nor perfect (*i.e.*, the market may initially over-react before fully equilibrating to the revealed information).[10] *See*

---

[10] To the extent that Congress intended to curb securities class litigation, it did so by imposing heightened pleading standards, *see* 15 U.S.C. § 78u-4(b), staying discovery pending

Bradford Cornell & James C. Rutten, *Market Efficiency, Crashes, and Securities Litigation*, 81 Tul. L. Rev. 443, 469-70 (2006). Moreover, although the PSLRA imposed a heightened standard for alleging scienter at the pleading stage, Congress declined to create any standard requiring pleading or proof by a preponderance of the evidence with respect to loss causation at any time prior to trial.

In 1998, Congress enacted the Securities Litigation Uniform Standards Act ("SLUSA"). *See* Pub. L. No. 105-353, 112 Stat. 3227 (1998), codified in pertinent part at 15 U.S.C. §§ 77p(d), 77p(f), 78bb(f). SLUSA, generally speaking, requires private securities class action claims to be litigated under federal law rather than under state law. *See Merrill Lynch, Pierce, Fenner & Smith Inc. v. Dabit*, 547 U.S. 71, 87 (2006). Because class action claims under Section 10(b) almost always rest on the fraud-on-the-market doctrine, in enacting SLUSA, Congress implicitly recognized the vitality of the doctrine while leaving it undisturbed.

Finally, in 2002, Congress once again revised the federal securities laws in the Sarbanes-Oxley Act, to extend the limitations period for private actions under Section 10(b) and Rule 10b-5. *See* Pub. L. No. 107-204, § 804, 116

---

motions to dismiss, *see id.*, and expressly regulating the selection of lead plaintiffs and the conduct of class actions, *see* 15 U.S.C. § 78u-4(a). It did not revisit or alter the presumption of reliance.

Stat. 745, 801 (2002) (codified at 28 U.S.C. § 1658). Once again Congress imposed no new requirements for pleading or proving a presumption of reliance, as the Fifth Circuit has subsequently done by judicial fiat.

The Securities and Exchange Commission has similarly based its regulations on the premise that markets, with reasonable efficiency, respond to material information (and misinformation). *See, e.g.*, Proposed Rule: Selective Disclosure and Insider Trading, Release Nos. 33-7787, 64 FR 72590, 72591 (1999) ("Full and fair disclosure of information by issuers of securities to the investing public is a cornerstone of the federal securities laws. In enacting the mandatory disclosure system of the Exchange Act, Congress sought to promote disclosure of "honest, complete, and correct information" to facilitate the operation of fair and efficient markets.") (footnotes omitted); Shelf Registration, Securities Act Release No. 33-6499, 48 Fed. Reg. 52,889, 52,892 (1983) (integrated disclosure "recognizes the applicability of the efficient market theory"); Adoption of Integrated Disclosure Systems, Securities Act Release No. 33-6383, 47 Fed. Reg. 11,380, 11,382 n.9 (1982) ("information regularly furnished to the marketplace ... may be reflected in the price of the outstanding securities"); Exchange Act Release No. 6331, 46 Fed. Reg. 41,902 (Aug. 13, 1981) (setting forth "the Commission's belief that the market operates efficiently for these companies, *i.e.*, that the disclosure in Exchange Act reports and other communications by the registrant, such as press releases, has already been disseminated and accounted for by the market place").

In sum, in the years since *Basic* was decided, Congress has legislated three times on the subject of private securities fraud litigation. In two of those instances, Congress sought to curb private class litigation. Yet Congress did not seek to make it more difficult for class plaintiffs to prove their reliance on misrepresentations or omissions, even while, in the PSLRA, reformulating the measure of plaintiffs' damages. Congress's reformulation embraced the fraud-on-the-market doctrine while simultaneously acknowledging that the doctrine does not depend on "perfect" or "immediate" informational efficiency.

IV. THE FIFTH CIRCUIT'S *DE FACTO* REJECTION OF THE FRAUD-ON-THE-MARKET DOCTRINE FRUSTRATES CONGRESSIONAL PURPOSE AND DEFIES THE PRECEDENT OF THIS COURT.

In light of the foregoing, the Fifth Circuit's departure from established law in *Oscar* is without warrant. Its conjecture that "[t]he assumption that every material misrepresentation will move a stock in an efficient market is unfounded, at least as market efficiency is presently measured", 487 F.3d at 269, is both unsound in itself and insufficient grounds for recasting congressional purpose in the federal securities laws or departing from this Court's precedent.

The notion that "material misrepresentation[s] will move a stock" is not an "assumption" in any usual sense of that word – it was Congress's premise and policy in enacting the federal securities laws, as shown above. The Fifth Circuit

is not free to substitute its take on the way securities markets work in place of Congress's understanding.

Moreover, the congressional "assumption" reflected in the presumption of reliance is not as the Fifth Circuit portrays it. It is not that "every material misrepresentation will" always "move a stock" (as the Fifth Circuit implies with its muscular language). Congress's understanding, as well as this Court's in *Basic*, is that changes in material, public information (including misrepresentations) generally affect securities prices in a well developed securities market and the presumption can be rebutted by defendants at trial. This common-sense generalization is far more modest than the Fifth Circuit's characterization of it, and it amply supports the presumption of reliance.

Finally, there has been no fundamental change in the "measure[]" of market efficiency – or in the understanding of the effect of new information on market prices for securities – since *Basic* that would warrant narrowing or otherwise revisiting the presumption of reliance in the context of class certification.[11]

The two circumstances the Fifth Circuit specifically noted in *Oscar* as grounds to deviate from the proposition that "material misrepresentation[s] will move a stock in an efficient market" – specifically, (a) that a market might not react to some kinds of information or (b) that a

---

[11] *See, supra*, at n.7-9 and accompanying text; *infra*, at n.13 and accompanying text.

market might have already reacted to corrective information prior to its public disclosure, *see* 487 F.3d at 269 – are old ideas that were discussed in the legal and economic literature prior to this Court's decision in *Basic*.[12] For example, *Oscar*

---

[12] *See, e.g.*, Thomas R. Dyckman & Dale Morse, *Efficient Capital Markets and Accounting: A Critical Analysis* 28-29 (1986); James H. Lorie, Peter Dodd & Mary Hamilton Kimpton, *The Stock Market: Theories and Evidence* (2d ed. 1985); James R. Vertin, *Passive Equity Management Strategies*, in *Readings in Investment Management* 113 (F. Fabozzi ed., 1983); Frank K. Reilly & Eugene F. Drzycimski, *Short Run Profits From Stock Splits*, 10 Fin. Mgmt. 64 (1981); Jerome B. Baesel & Garry R. Stein, *The Value of Information: Inferences From the Profitability of Insider Trading*, 14 J. Fin. & Quant. Analysis 553 (1979); Robert S. Kaplan, *The Information Content of Financial Accounting Numbers: A Survey of Empirical Evidence*, in *The Impact of Accounting Research on Practice and Disclosure* 134, 167 (A. Abdel-Khalik & T. Keller eds., 1978); Larry Y. Dann, David Mayers & Robert J. Raab, *Trading Rules, Large Blocks, and the Speed of Adjustment*, 4 J. Fin. Econ. 3 (1977); James M. Patell, *Corporate Forecasts of Earnings per Share and Stock Price Behavior: Empirical Tests*, 14 J. Acct. Res. 246 (1976); Arnold B. Moore, *Some Characteristics of Changes in Common Stock Prices*, in *The Random Character of Stock Market Prices* 139 (P. Cootner, rev. ed. 1967); Clive W.J. Granger & Oskar Morgenstern, *Spectral Analysis of New York Stock*

cited to the notion that earnings information is incorporated into share prices over time. *See Oscar*, 487 F.3d at 269 n.43 (citing Macey & Miller, 42 Stan. L. Rev. at 1083). That idea, however, was documented in 1968 – a full twenty years before *Basic*. *See* Ball & Brown, *supra* n.13.

Indeed, that the economic debate continues and focuses on the purported limited anomalies in the theory is only proof of the strength of the general proposition. These minor imperfections provide no grounds for revisiting or narrowing

---

Market Prices, 16 Kyklos 1 (1963). *See also supra*, at n.9.

The Fifth Circuit's reliance on Jonathan Macey and Geoffrey Miller's 1990 article, *Good Finance, Bad Economics: An Analysis of the Fraud-on-the-Market Theory*, 42 Stan. L. Rev. 1059 (1990), as documenting a change in the understanding of market efficiency is ironic – that article was published only two years after *Basic* was decided, and nine of its ten sources evaluating the efficient market hypothesis were issued before *Basic* was decided (and the one issued after *Basic* supports the efficient market hypothesis). *Id.* at 1080-81 & nn.110-126. Macey and Miller's article is an argument that *Basic* was wrongly decided, not a demonstration that evolving empirical research invalidates *Basic*. Tellingly, Macey and Miller submit that the second scenario to which the Fifth Circuit referred (that a market might have already reacted to corrective information prior to its public disclosure) is without empirical support. *See* 42 Stan. L. Rev. at 1078 n.100.

Basic's presumption of reliance, particularly in the face of more than seven decades of congressional policy premised on the fundamental – and common sense – concept that material information (or misinformation) impacts market prices for securities.

CONCLUSION

For the foregoing reasons, and those submitted by Petitioner and other *amici*, the ruling of the Fifth Circuit should be reversed and this case remanded with instructions that the proposed class be certified.

AMICUS CURIAE BRIEF

No. 09-1403

IN THE

Supreme Court of the United States

ERICA P. JOHN FUND, INC., FKA ARCHDIOCESE OF MILWAUKEE SUPPORTING FUND, INC.,
Petitioner,

v.

HALLIBURTON CO. ET AL.,
Respondents.

On Writ of Certiorari to the United States Court of Appeals for the Fifth Circuit

INTEREST OF *AMICUS CURIAE*

The Securities Industry and Financial Markets Association ("SIFMA") is a securities industry trade association representing the interests of hundreds of securities firms, banks, and asset managers.[1] SIFMA's mission is to support a strong financial industry while promoting investor opportunity, capital formation, job creation, economic growth, and trust and confidence in the financial markets. SIFMA, with offices in New York and Washington, D.C., is the United States regional member of the Global Financial Markets Association.

SIFMA regularly files *amicus curiae* briefs in cases that raise legal issues of vital concern to the participants in the securities industry. SIFMA has appeared before this Court as *amicus curiae* in many cases involving issues arising under the federal securities laws, most recently in *Matrixx Initiatives, Inc.* v. *Siracusano*, 79 U.S.L.W. 4187 (U.S. Mar. 22, 2011) (involving pleading standard for materiality in private securities fraud claim), *Morrison* v. *National Australia Bank, Ltd.*, 130 S. Ct. 2869 (2010) (extra-territorial application of anti-fraud provisions of federal securities laws), *Merck & Co.* v. *Reynolds*, 130 S. Ct. 1784 (2010) (statute of limitations for bringing private securities fraud claim), and *Jones* v. *Harris Associates L.P.*, 130 S. Ct. 1418 (2010) (breach of

No counsel for a party authored this brief in whole or in part; and no such counsel or any party made a monetary contribution intended to fund the preparation or submission of this brief. No person or entity, other than *amicus* and its counsel, made a monetary contribution intended to fund its preparation or submission.

fiduciary duty under the Investment Company Act of 1940).

This case involves important issues regarding liability under the federal securities laws for misrepresentations in connection with public market transactions and the standards under which adjudication of private securities claims pursuant to the class action procedure is appropriate. These issues are directly relevant to SIFMA's mission of promoting fair and efficient markets and a strong financial services industry. Resolution of these issues could have a profound effect on SIFMA's members.

SUMMARY OF ARGUMENT

In *Basic Inc.* v. *Levinson*, 485 U.S. 224 (1988), this Court recognized the "fraud-on-the-market" theory of reliance in response to an impediment to class certification of private, open-market securities fraud cases under Rule 10b-5, 17 C.F.R. § 240.10b-5. In order to certify a class of plaintiffs seeking damages under Rule 23 of the Federal Rules of Civil Procedure, a district court must first find that issues common to the class predominate over individualized issues. The reliance element of fraud at common law, however, is a classic individual inquiry, involving the facts and circumstances of each plaintiff's decision to engage in a particular transaction. As the *Basic* Court recognized, "[r]equiring proof of individualized reliance from each member of the proposed plaintiff class effectively would have prevented respondents from proceeding with a class action, since individual issues then would have overwhelmed the common ones." 485 U.S. at 242.

The fraud-on-the-market theory of indirect reliance, in which a plaintiff's reliance on the market's in-

tegrity substitutes for direct reliance on an alleged misrepresentation, allows the plaintiff to surmount an otherwise insurmountable hurdle to class certification. In so doing, the theory enables a potent form of litigation, in which small declines in share prices can translate into massive claims of aggregated damages to a shareholder class. The high social costs of such class actions, which are well recognized, have prompted repeated legislative efforts to curtail meritless private securities fraud cases and debate about the continued validity of the *Basic* decision. The same considerations mandate that if the *Basic* theory continues as a recognized judicial construct of market-wide reliance, that theory should be wielded carefully and with restraint. It is thus critical that a district court, before allowing a class of open-market investors to avail itself of the fraud-on-the-market theory, must be satisfied that the factual predicates for the application of the theory exist.

One such predicate is that the alleged misrepresentation must actually distort the price of the security at issue. Under the *Basic* paradigm, the public securities markets "rely" on a misrepresentation about a security by incorporating inaccurate information into the price of a security. In the absence of such market impact, it makes no sense to allow a plaintiff to satisfy the reliance element of securities fraud through reliance on the "integrity" of the market price. Proof of price impact is therefore essential to any fraud claim in which reliance is premised on a "fraud on the market."

As the Fifth Circuit correctly insisted, the district court should determine that price impact occurred—that the alleged misrepresentation "*actually moved*

the market," *Oscar Private Equity Invs.* v. *Allegiance Telecom, Inc.*, 487 F.3d 261, 265 (5th Cir. 2007)—prior to certifying a class. In the absence of price impact, there can be no indirect reliance on a misrepresentation through reliance on the market price. And in the absence of such indirect reliance, questions of individual reliance will predominate and render securities fraud claims unsuitable for resolution in a class action under Rule 23. The approach advocated by Petitioner and its *amici*—limiting the fraud-on-the-market inquiry at the class certification stage to the general efficiency of the market in question, and reserving for the merits the issue of whether the market price actually conveyed the particular misrepresentation alleged—represents an unwarranted extension of *Basic* that is incompatible with Rule 23.

The Fifth Circuit also correctly allocated the initial burden to plaintiff to provide evidence of price impact to support its invocation of the fraud-on-the-market theory. As the party invoking the presumption of indirect reliance, the plaintiff should bear the initial burden of establishing the applicability of rule. The Court's characterization in *Basic* of the rule as a rebuttable presumption does not preclude the Court from affirming the Fifth Circuit's approach as appropriate under Rule 23.

The expansion of *Basic* advocated by Petitioner and its *amici* is unwarranted not only as a matter of precedent, but also as a matter of sound judicial policy. *Basic* is grounded on an economic theory that more recent experience and scholarship have undermined. In light of the controversy attendant to the theory and the private securities fraud class actions it sanctioned, the Court should reject efforts by

securities plaintiffs to broaden the theory's practical reach, assuming that the theory has continuing vitality at all.

ARGUMENT

I. THE FRAUD-ON-THE-MARKET THEORY OF RELIANCE DEPENDS ON DISTORTION OF THE MARKET BY AN ALLEGED MISSTATEMENT.

It is not true, as Petitioner and its *amici* suggest, that the core holding of the decision under review represents a departure from this Court's precedent. Rather, the Fifth Circuit's rule that a class of shareholders may not be certified in a Rule 10b-5 case absent proof that an allegedly false statement "*actually moved* the market," *Oscar*, 487 F.3d at 265, follows inexorably from the "fraud-on-the-market" theory of reliance upon which certification depends. That theory is based upon the idea that an investor's reliance on a market price that has been distorted by a misrepresentation is equivalent to reliance on the misrepresentation. If the misrepresentation does not affect market price, it is not communicated to the plaintiff through the market, and there is no reliance.

A. *Basic* and the Rule of Indirect Reliance.

In *Basic*, the Court adopted a special rule, unique to the Rule 10b-5 context, allowing an investor to claim fraud without proof that the investor was aware of the defendant's false or misleading statements at the time of the transaction. Although the Court reaffirmed that, just as in an action for fraud at common law, "reliance is an element of a Rule 10b-5 cause of action," the Court modified the common-law reliance requirement for transactions occurring in "[t]he modern securities markets." *Id.* at 243-44.

The Court held that in an efficient market, in which the price of a security reflects all publicly available information, an investor's reliance on a public misstatement may be established *indirectly* through the misstatement's distortion of the market price. Under this "fraud-on-the-market" theory, as the name suggests, the *market* "relies" on a defendant's misstatements in establishing the market price, and investors in turn rely on the "integrity of the price set by the market." *Id.* at 245.

In *Basic*, the district court certified a class of plaintiff-shareholders under Federal Rule of Civil Procedure 23(b)(3), but acknowledged that it could not have done so without the fraud-on-the-market doctrine. *Id.* at 228 & n.5, 242. Rule 10b-5 plaintiffs, like all fraud plaintiffs, must prove they relied on a misstatement to their detriment. *Id.* at 242-43. "Reliance provides the requisite causal connection between a defendant's misrepresentation and a plaintiff's injury." *Id.* at 243. "[O]rdinarily," it requires a showing that the plaintiff "read or heard the false or misleading representations" and acted on them. 3B Harold S. Bloomenthal & Samuel Wolff, *Securities and Federal Corporate Law* § 13:25 (2d ed. 2010). Because such facts are particular to each plaintiff, individual issues in cases like *Basic* would "overwhelm[] the common ones." 485 U.S. at 242-43.

The fraud-on-the-market theory, which the Court adopted in *Basic*, provides a judicially created path to overcoming the bar on class certification of Rule 10b-5 claims. The theory rests on the "'hypothesis that, in an open and developed securities market, the price of a company's stock is determined by the available material information regarding the company and its business.'" *Id.* at 241-42 (quoting *Peil* v. *Speiser*, 806

F.2d 1154, 1160-61 (3d Cir. 1986)). Consequently, if the "available material information" about a company includes material misrepresentations, the stock price will be distorted by the misleading information. *See id.* at 246. Thus, the theory posits that "[a]n investor who buys or sells stock at the price set by the market does so in reliance on the integrity of that price"—that is, on the notion that the price is *not* distorted by deliberate misinformation; after all, "'[w]ho would knowingly roll the dice in a crooked crap game?'" *Id.* at 246-47 (quoting *Schlanger* v. *Four-Phase Sys. Inc.*, 555 F. Supp. 535, 538 (S.D.N.Y. 1982)).

As a result, under the fraud-on-the-market theory, a plaintiff need not show that she relied *directly* on allegedly false information by buying or selling securities based on that information. Rather, a plaintiff need only show that she relied *indirectly* on a material misrepresentation by buying or selling securities in "an impersonal, efficient market" for the securities at issue, where the misrepresentation was reflected in the market price. *See id.* at 248 & n.27 (internal quotation marks omitted). If the market price of a security is distorted by an alleged misrepresentation, "the reliance of individual plaintiffs on the integrity of the market price" serves as a surrogate for reliance on the misrepresentation itself. *Id.* at 247.

B. In the Absence of Evidence that an Alleged Misrepresentation Distorted the Market Price, There Can Be No Indirect Reliance.

The Court's opinion in *Basic*, by its express terms and by its logic, makes clear that an alleged misstatement's distortion of the market price of a security is an essential element of the fraud-on-the-

market theory. Simply put, a theory that draws an inference of investor reliance on a misstatement from investor reliance on the market price of the company's securities has no application unless the misstatement is, in fact, reflected in the market price.

The fraud-on-the-market theory adopted in *Basic* relieves a plaintiff of proving direct reliance on a defendant's material misrepresentation where the plaintiff relied on the "integrity of the market price" that reflected that misrepresentation. *Basic*, 485 U.S. at 247. The theory therefore depends on the notion that in an efficient market, "the dissemination of material misrepresentations . . . *affects the price of the stock*." *Id.* at 244-45 (emphasis added) (internal quotation marks omitted). Of course, the theory falls apart if a misrepresentation does not, in fact, affect the market price. In that case, reliance on the integrity of the market price is no substitute for reliance on a misrepresentation, because the misrepresentation has had no impact on the market price. An actual price impact is critical to the fraud-on-the-market theory's central concern: "whether the market as a whole was fooled." Donald C. Langevoort, *Theories, Assumptions, and Securities Regulation: Market Efficiency Revisited*, 140 U. Pa. L. Rev. 851, 903-05 (1992).

A simple syllogism illustrates the point. Under *Basic*, (a) an investor who buys or sells stock in an open and developed securities market does so in reliance on the integrity of the market price of the stock; (b) all material publicly available information—including any material misrepresentation—is reflected in the market price; and therefore, (c) the investor buys or sells stock in reliance on material misrep-

resentations. For the syllogism to hold, the misrepresentation must affect the market price of the stock; otherwise, step (b) fails and there can be no inference that the investor relied on the misrepresentation. *Cf. Basic*, 485 U.S. at 247 n.24 (the "presumption of reliance" requires a "belie[f] that market professionals generally consider most publicly announced material statements about companies, thereby affecting stock market prices"); *accord No. 84 Employer-Teamster Joint Council Pension Trust Fund* v. *Am. W. Holding Corp.*, 320 F.3d 920, 948 (9th Cir. 2003) ("[T]he fraud-on-the-market theory is premised on the fact that a misrepresentation has affected the stock's price incongruently to the stock's true 'value.'"). In the absence of price impact, therefore, a plaintiff cannot be deemed to have relied indirectly on a misstatement through reliance on the market price, because the alleged misstatement will not have been incorporated into that price.

As the Court in *Basic* recognized, the fraud-on-the-market theory hinges on the notion that an alleged misrepresentation was incorporated into the market price. Thus, the Court established two elements as prerequisites to the application of the theory, each serving to establish that an alleged misrepresentation would in fact distort the market price of the security at issue. First, the Court noted that the market for the security must be *efficient*, i.e., one in which public information is readily digested and immediately reflected in the price of the security. *See* 485 U.S. at 248 & n.27. Where the market is inefficient, prices may remain unaffected by material misstatements and the concept of indirect reliance will falter. Second, the Court stated that the alleged misrepresentation must be *material*, i.e., one that "'would have been viewed by the reasonable investor

as having significantly altered the "total mix" of information made available.'" *Id.* at 231-32 (quoting *TSC Indus., Inc.* v. *Northway, Inc.*, 426 U.S. 438, 449 (1976)). An immaterial misstatement, which by the Court's definition would not be significant to investors, could not support an inference of indirect reliance under the fraud-on-the-market theory because such a misstatement would not affect the market price.

Neither Petitioner nor any of its *amici* appear to dispute that price impact is a necessary component of the fraud-on-the-market theory of reliance.[2] Nor could they: as the Court held, any inference of indirect reliance under the theory ultimately turns on "the link between the alleged misrepresentation" and "the price received (or paid)" for the stock. *Id.* at 248. If the fraud has no impact on the market price of the stock, the link is "broken: the basis for finding that the fraud had been transmitted through market price would be gone." *Id.* There could be no clearer statement of the requirement of price impact to the fraud-on-the-market theory.

---

[2] *See, e.g.*, Pet. Br. at 41 ("plaintiffs cannot recover for misrepresentations that did not affect the market price"); Br. of U.S. at 21 ("The gravamen of the fraud-on-the-market theory is that . . . any public material misstatements bearing on the stock's value will presumptively affect the amount that any investor pays for shares during the period that the market is misled."); Br. of Fin. Economists at 7 ("the market can be 'fooled' by public, material misrepresentations, such that the false information is reflected in the market price for the company's securities"); Br. of Law Profs. at 7 ("In proving that a well-developed and open market exists, investors establish a mechanism by which misstatements are shown to generate distortions in market prices.").

II. THE COURT OF APPEALS CORRECTLY REQUIRED PLAINTIFF TO DEMONSTRATE PRICE IMPACT BY A PREPONDERANCE OF THE EVIDENCE AS A PREREQUISITE TO CLASS CERTIFICATION.

Although *Basic* demonstrates that price impact is necessary to application of the fraud-on-the-market theory, the Court did not discuss the relationship between price impact and the elements of fraud, or clearly establish the procedural framework under which the inquiry into price impact should be conducted. This ambiguity has resulted in divergent approaches to class certification of private Rule 10b-5 cases in the Courts of Appeals. The Fifth Circuit in the case under review required the plaintiff to establish proof of price impact prior to class certification. The Second and Third Circuits also consider proof of price impact at the class certification stage, but in the context of the defendant's rebuttal of the *Basic* presumption of reliance. *In re Salomon Analyst Metromedia Litig.* ("*In re Salomon*"), 544 F.3d 474, 485 (2d Cir. 2008); *In re DVI, Inc. Sec. Litig.*, Nos. 08-8033, 08-8045 ("*In re DVI*"), 2011 WL 1125926, at *8 (3d Cir. Mar. 29, 2011). The Seventh Circuit, meanwhile, apparently has concluded that the price impact inquiry should be reserved for trial (although the court was not clear whether the inquiry should be considered part of loss causation, materiality, rebuttal of the *Basic* presumption, or some other analysis). *Schleicher* v. *Wendt*, 618 F.3d 679, 685 (7th Cir. 2010).

The Fifth Circuit's approach is correct.[3] It is distinguished by two critical requirements: (1) determina-

[3] By referring to the doctrine of "loss causation," the Fifth Circuit in *Oscar* unnecessarily implied that certification would be improper in cases in which a plaintiff can demonstrate that a

tion of price impact *prior to* certification of a class based on the fraud-on-the-market theory and (2) allocation of the initial burden of proof of price impact to the plaintiff, as the party invoking the fraud-on-the-market rule of indirect reliance. These two requirements are essential to reconciling *Basic* with Rule 23 and maintaining appropriate limits on the powerful modification of the reliance requirement that the Court adopted in *Basic*.

A. The Price Impact Inquiry Must Be Resolved Before Certification of a Fraud-on-the-Market Class.

As explained in *Basic*, the fraud-on-the-market theory allows certification of an otherwise uncertifiable class in which, absent the rule of indirect reliance, individualized reliance issues would predominate. It follows that certification of a class of plaintiffs claiming securities fraud based on public-market transactions is improper when the theory is inapplicable. In the Rule 10b-5 context, therefore, applicability of *Basic*'s rule of indirect reliance is as much a prerequisite to class certification as any of the expressly enumerated requirements of Rule 23. Because a district court must find that all Rule 23 requirements are satisfied prior to certifying a class, it is incumbent upon the district court to determine

---

misstatement affected market price at the time it was made, but, because of subsequent events or other intervening causes (e.g., disclosures of negative news unrelated to the misstatement), the plaintiff is not entitled to recover the particular losses the plaintiff claims. In the decision below, the Fifth Circuit clarified that a plaintiff need only show that the misrepresentation affected market price in the first instance. *See* Resp. Br. at 18.

that the fraud-on-the-market theory is applicable before it may certify a class of public-market traders.

1. This Court has held that Rule 23 requires "rigorous analysis" to ensure that class certification is appropriate. *Gen. Tel. Co. of the Sw.* v. *Falcon*, 457 U.S. 147, 160 (1982); *see also* Fed. R. Civ. P. 23(b)(3) (district court must "find[]" that "questions of law or fact common to class members predominate"). The Court has long recognized that "the class determination generally involves considerations that are enmeshed in the factual and legal issues comprising the plaintiff's cause of action." *Coopers & Lybrand* v. *Livesay*, 437 U.S. 463, 469 (1978) (internal quotation marks omitted).

The Courts of Appeals have uniformly interpreted Rule 23 and this Court's precedent to preclude a district court from certifying a class based solely on the plaintiff's allegations. Instead, plaintiffs must demonstrate by a preponderance of the evidence that they have established the necessary predicates to certification, regardless of whether class certification issues overlap with the merits. As a leading treatise explains: "Consensus is rapidly emerging among the United States Courts of Appeal" that courts must "consider evidence, resolve factual disputes that are relevant to Rule 23's criteria, and make determinations under a preponderance of the evidence standard as to satisfaction of those criteria even if those determinations overlap with merits issues." 1 Joseph M. McLaughlin, *McLaughlin on Class Actions* § 3:12 (7th ed. 2011). In the words of a recent Ninth Circuit opinion, "[t]he core holding" across the Circuits on these points "is essentially unanimous." *Dukes* v. *Wal-Mart Stores, Inc.*, 603 F.3d 571, 583 (9th Cir.), *cert. granted in part*, 131 S. Ct. 795 (2010).

For example, in *In re Initial Public Offering Securities Litigation* ("*In re IPO*"), the Second Circuit held that "a district judge may not certify a class without making a ruling that each Rule 23 requirement is met and that a lesser standard such as 'some showing' for satisfying each requirement will not suffice." 471 F.3d 24, 27 (2d Cir. 2006); *see also Teamsters Local 445 Freight Div. Pension Fund* v. *Bombardier Inc.*, 546 F.3d 196, 202 (2d Cir. 2008) ("Although we did not use the words 'preponderance of the evidence' in *In re IPO* to describe the standard of proof applicable to Rule 23 issues, we in effect required the application of a cognate standard . . . ."). All other Courts of Appeals to have considered the issue—nearly all other Circuits—are in accord.[4]

---

[4] *See, e.g.*, *In re PolyMedica Corp. Sec. Litig.* ("*In re PolyMedica*"), 432 F.3d 1, 5-6 (1st Cir. 2005) ("a district court is not limited to the allegations raised in the complaint, and should instead make whatever legal and factual inquiries are necessary to an informed determination of the certification issues"); *In re Hydrogen Peroxide Antitrust Litig.*, 552 F.3d 305, 320 (3d Cir. 2008) ("[f]actual determinations necessary to make Rule 23 findings must be made by a preponderance of the evidence"); *Gariety* v. *Grant Thornton, LLP*, 368 F.3d 356, 366 (4th Cir. 2004) ("the factors spelled out in Rule 23 must be addressed through findings, even if they overlap with issues on the merits"); *West* v. *Prudential Sec., Inc.*, 282 F.3d 935, 938 (7th Cir. 2002) ("A district judge may not duck hard questions by observing that each side has some support, or that considerations relevant to class certification also may affect the decision on the merits."); *Blades* v. *Monsanto Co.*, 400 F.3d 562, 575 (8th Cir. 2005) ("in ruling on class certification, a court may be required to resolve disputes concerning the factual setting of the case"); *Vallario* v. *Vandehey*, 554 F.3d 1259, 1266-67 (10th Cir. 2009) ("District courts ensure Rule 23's provisions are satisfied by conducting a rigorous analysis, addressing the rule's requirements through findings, regardless of whether these findings necessarily overlap with issues on the merits." (internal quota-

2. Neither Petitioner nor the Government quarrel with the consensus view that issues necessary to the Rule 23 inquiry must be determined by the district court, using a preponderance of the evidence standard, prior to certification.[5] Nor do they dispute that price impact is essential to the fraud-on-the-market theory.[6] Because all parties also agree that application of the theory is required in order to avoid individualized reliance issues that would render class treatment of securities fraud claims improper, the fact that price impact is a necessary element of the theory would seem to dictate that price impact must be established prior to class certification by a preponderance of the evidence.

Nevertheless, Petitioner and its *amici* advocate an interpretation of *Basic* that would postpone resolution of the price impact inquiry until summary judgment or trial. *See* Pet. Br. at 35, 45-46 ("the proper time to rebut the presumption of reliance . . . is at *trial*"); Br. of U.S. at 16-19 & n.3 ("factual determinations regarding price distortion" should be reserved for trial). Thus, Petitioner and the Government suggest that where a plaintiff's claim is based

---

tion marks and citations omitted)); *Williams* v. *Mohawk Indus., Inc.*, 568 F.3d 1350, 1358 (11th Cir. 2009) ("it is appropriate to consider the merits of the case to the degree necessary to determine whether the requirements of Rule 23 will be satisfied" (internal quotation marks omitted)).

[5] *See* Pet. Br. at 48 ("Trial courts must make a rigorous determination of whether the Fed. R. Civ. P. 23 prerequisites are satisfied."); Br. of U.S. at 10 n.1 ("The courts that have addressed the question have held that facts relevant to whether the Rule 23 requirements have been met must be established by a preponderance of the evidence.").

[6] *See supra* note 2.

on public misstatements and open market transactions, the only threshold requirement to invoking the theory at the class certification stage is market efficiency. Pet. Br. at 32, 45 ("plaintiffs may establish reliance on a class-wide basis and satisfy the predominance requirement of Rule 23 by establishing that the stock traded on an efficient market"); Br. of U.S. at 11 (plaintiffs are required to show only "that the company's shares were traded in an efficient market"). *See also* Br. of Law Profs. at 14 ("If investors meet the burden of proving that a particular market is sufficiently efficient, then *Basic* creates a rebuttable presumption that the reliance element of a 10b-5 claim is satisfied."). The thrust of this argument is that because price impact is subject to class-wide proof and relevant to the elements of the Rule 10b-5 claim as well as elements of the fraud-on-the-market theory, it should be presumed at the class certification stage and tested on the merits. Br. of U.S. at 7, 17-18.

This logic is doubly flawed. First, it overstates the *Basic* "presumption." The Court in *Basic* held that *reliance*—not price impact—could be presumed (and proved) indirectly through evidence of an efficient market and a material misrepresentation. The Court did not hold that a misrepresentation's distortion of the market price could be presumed from a mere showing of efficiency. To the contrary, the Court held that the presumption of indirect reliance would be negated by "[a]ny showing that severs the link between the alleged misrepresentation and . . . the price received (or paid) by the plaintiff." 485 U.S. at 248. Market efficiency, while necessary to the fraud-on-the-market theory, is not sufficient. Efficient markets have been assumed to account for all public information, but not all public information affects the

price of a security traded in an efficient market. In the absence of a price distortion, there is no basis for finding that a plaintiff relied on the misrepresentation by relying on the market price.[7]

Second, dispensing with a showing of price impact at the class certification stage would undermine the sound judicial administration of Rule 10b-5 claims. If the district court were to certify a class under the fraud-on-the-market theory without a showing of price impact, and the plaintiff failed to prove price impact at trial, that failure would not necessarily dispose of the claims of the class. A class can be decertified whenever it becomes apparent that class treatment is inappropriate, including at the end of trial.[8] Because the failure to prove price impact would defeat the fraud-on-the-market theory—and

---

[7] The Government recognizes the need for a "market-distortion inquiry," but argues that "so long as [it] turns on factual or legal issues that are common to the members of the class, class certification is appropriate regardless of the perceived likelihood at that early stage that the plaintiffs will be able to establish reliance on the merits." Br. of U.S. at 17. That reasoning is flawed. Efficiency of the market, which all parties agree is a factual predicate to class certification in a fraud-on-the-market case, is also subject to common proof—indeed the same or similar proof that can establish price impact. A finding of efficiency, too, could conceivably be deferred to a later stage of the litigation. But deferral would be improper because—like price impact—market efficiency is a foundational fact upon which the *Basic* theory of indirect reliance rests.

[8] *See* Fed. R. Civ. P. 23(c)(1)(C); *Falcon*, 457 U.S. at 160 ("Even after a certification order is entered, the judge remains free to modify it in the light of subsequent developments in the litigation."); 1 *McLaughlin on Class Actions* § 3:6 ("Prior to entry of final judgment, . . . the district court has an unflagging obligation to intervene at any time—even during trial—if it becomes apparent that certification is inappropriate.").

thus preclude class treatment—courts could interpret Rule 23 as requiring post-trial decertification, rather than entry of judgment against the class on the merits. Indeed, concerns for the due process rights of absent class members, the importance of which this Court has repeatedly emphasized,[9] may lead courts to decertify the class even if insufficient proof of price impact could also be deemed fatal to the merits of the claim at issue.[10]

3. Even if district courts would generally enter judgment against the class upon failure of proof of price impact on the merits, that failure of proof would also mean that certification was inappropriate in the first place. And there is simply no reason why the

---

[9] *See, e.g.*, *Ortiz* v. *Fireboard Corp.*, 527 U.S. 815, 845-48 (1999) (interpreting Rule 23(b)(1)(B) narrowly in light of "the due process 'principle of general application in Anglo-American jurisprudence that one is not bound by a judgment *in personam* in a litigation in which he is not designated as a party'" (quoting *Hansberry* v. *Lee*, 311 U.S. 32, 40 (1940))).

[10] *See, e.g.*, *Stastny* v. *S. Bell Tel. & Tel. Co.*, 628 F.2d 267, 276 n.13 (4th Cir. 1980) ("Though a mere withdrawal of certification may be thought unfair to the party opposing the class after a full trial has revealed an underlying failure of proof on the merits of the class claim as alleged," this is the result dictated "by due process concerns for the putative class members."); *accord Briggs* v. *Anderson*, 796 F.2d 1009, 1019, 1029 (8th Cir. 1986) (where plaintiffs failed to establish class-wide employment discrimination at trial, claim would be dismissed without prejudice due to court's "reluctance to bind potential class members"); *O'Brien* v. *Sky Chefs, Inc.*, 670 F.2d 864, 869 (9th Cir. 1982) (decertification, which "avoided any *res judicata* effect against the class," was preferable to entry of summary judgment where plaintiffs' conduct of litigation suggested "inadequate representation" of class interests), *overruled on other grounds by Atonio* v. *Wards Cove Packing Co.*, 810 F.2d 1477 (9th Cir. 1987).

plaintiff should be given a free pass on price impact until the merits stage, as the Seventh Circuit's decision in *Schleicher* contemplates. *See Schleicher*, 618 F.3d at 685 ("It is possible to certify a class under Rule 23(b)(3) even though all statements turn out to have only trivial effects on stock prices.").

Deferring judicial inquiry into price impact unfairly reduces the showing required to obtain class certification and, as a result, enlarges the problem of "blackmail settlements" induced by a small probability of an immense judgment. *Cf.* Henry J. Friendly, *Federal Jurisdiction: A General View* 120 (1973). A decision to certify a class exerts enormous and undue settlement pressure on a defendant, even one with a meritorious defense.[11] This problem is especially acute in private securities cases. Research shows that if putative class securities lawsuits survive dismissal and a large class is certified, the risks to a defendant are so enormous that even weak cases usually settle.[12] The consequences of proceeding to

---

[11] *See, e.g.*, *Coopers & Lybrand*, 437 U.S. at 476 ("[c]ertification of a large class may so increase the defendant's potential damages liability and litigation costs that he may find it economically prudent to settle and abandon a meritorious defense"); Fed. R. Civ. P. 23(f) 1998 Advisory Committee Note ("An order granting certification . . . may force a defendant to settle rather than incur the costs of defending a class action and run the risk of potentially ruinous liability."); *Newton* v. *Merrill Lynch, Pierce, Fenner & Smith, Inc.*, 259 F.3d 154, 165 (3d Cir. 2001) ("certifying the class may place unwarranted or hydraulic pressure to settle on defendants").

[12] *See* Denise N. Martin et al., *Recent Trends IV: What Explains Filings and Settlements in Shareholder Class Actions*, 5 Stan. J.L. Bus. & Fin. 121, 156 (1999) ("Generally, we find that the merits do not have much, if any, explanatory power on settlement size."); Janet Cooper Alexander, *Do the Merits Matter? A Study of Settlements in Securities Class Actions*, 43

summary judgment or trial include a risk of massive, if not ruinous, monetary liability, as well as heavy costs to conduct document and deposition discovery and to engage experts. These factors weigh in favor of requiring judicial inquiry into price impact at the class certification stage, rather than deferring the issue to a later stage that often will never come.

4. Petitioner's concerns about the unfairness of requiring proof of price impact at the class certification stage ring hollow. First, there is no legitimate complaint about lack of discovery. *See* Pet. Br. at 52-56 (arguing that "plaintiffs need merits discovery"). For one thing, the proof needed to establish the requisite price impact is found in public documents readily available to any plaintiff. *See Oscar*, 487 F.3d at 267 ("[the proof] demanded by the fraud-on-the-market regimen . . . is drawn from public data and public filings"). Indeed, the same type of proof typically used to show price impact at summary judgment or trial, an event study, is also frequently used at class certification to prove market efficiency—an element of the fraud-on-the-market theory that Petitioner concedes must be established prior to certification. *See, e.g.*, *Teamsters Local 445*, 546 F.3d at 207-08 ("[a]n event study that correlates the disclosures of unanticipated, material information about a security with corresponding fluctuations in price" supports a finding of market efficiency). *See also* Br. of Fin. Economists at 18 ("courts should primarily rely on an event study as the most direct evidence of market efficiency."). For another thing, where discovery is necessary to resolve a factual issue upon

---

Stan. L. Rev. 497, 523 (1991) (concluding that "the merits did not affect the settlement amounts").

which class certification depends, district courts routinely grant it.[13]

Second, there is no merit to Petitioner's argument that consideration of price impact at the class certification stage interferes with the Seventh Amendment rights of Rule 10b-5 plaintiffs. *See* Pet. Br. at 62-64. Plaintiffs have no Seventh Amendment right to have a jury determine whether class certification is appropriate. *Cf. Tellabs, Inc.* v. *Makor Issues & Rights, Ltd.*, 551 U.S. 308, 327 n.8 (2007) ("[i]n numerous contexts, gatekeeping judicial determinations prevent submission of claims to a jury's judgment without violating the Seventh Amendment"). Petitioner does not challenge the general rule that factual determinations necessary to Rule 23 findings must be made by the court using a preponderance of the evidence standard. Price impact is such a factual determination, and is not different in any relevant way from market efficiency or any other prerequisite for invoking the fraud-on-the-market theory. Moreover, as the Fifth Circuit explained in *Alaska Electrical Pension Fund* v. *Flowserve Corp.*—a per curiam opinion joined by Justice O'Connor—"[t]he denial of class certification does not prevent a plaintiff from proceeding individually," and the "the court's determination for class certification purposes may be revised (or wholly rejected) by the ultimate fact-finder." 572 F.3d 221, 229 (5th Cir. 2009) (internal

---

[13] *See* 5 James Wm. Moore, *Moore's Federal Practice* § 23.85 (3d ed. 2011) ("[t]ypically, district courts will allow discovery relevant to determining whether the requirements" of Rule 23 are satisfied); *see also* Fed. R. Civ. P. 23(c)(1) 2003 Advisory Committee Note ("it is appropriate to conduct controlled discovery . . . limited to those aspects relevant to making the certification decision on an informed basis").

quotation marks omitted). Thus, the Fifth Circuit's rule does not deprive plaintiffs of the right to present meritorious claims to a jury; it simply eliminates the ability to present those claims on behalf of a class—a privilege the Seventh Amendment does not protect.

A determination of the fact of price impact, therefore, should not be deferred until after class certification. Rather, where a putative class seeks the benefit of *Basic* in order to satisfy the Rule 23 requirements, the class may not be certified in the absence of affirmative proof of each factual predicate to the fraud-on-the-market theory of reliance, including price impact.

B. The Court of Appeals Correctly Allocated the Initial Burden of Proof of Price Impact to Plaintiff.

Although *Basic* leaves little room for doubt that the price impact inquiry must be resolved at the class certification stage, its discussion of a "rebuttable presumption" of reliance raises legitimate questions about the allocation of the burden of proof of price impact. The Fifth Circuit held that a plaintiff seeking class certification under the fraud-on-the-market theory bears the initial burden of establishing that the alleged misrepresentation actually moved the market. Petitioner argues that "the Fifth Circuit's ruling negates the presumption established by this Court in *Basic* without requiring any contrary showing by defendants." Pet. Br. at 32. To be sure, the *Basic* Court referred to the ability of defendants to "rebut the presumption of reliance" through "[a]ny showing that severs the link between the alleged misrepresentation and . . . the price received (or paid) by the plaintiff." 485 U.S. at 249; *see also id.* (defendants may "show that the misrepresentation in fact

did not lead to a distortion of price"). Although this discussion is in tension with the Fifth Circuit's approach, *see In re Salomon*, 544 F.3d at 483, 485, allocation of the initial burden of proof of price impact to plaintiff is appropriate.

1. Allocating the initial burden of proof of price impact to the plaintiff is consistent with the sensible view that, in the fraud-on-the-market context, price impact is a surrogate for materiality. *Basic* requires a plaintiff to establish certain "threshold facts" to invoke the fraud-on-the-market theory in the first instance. 485 U.S. at 248. Among other things, a plaintiff "must allege and prove" that the defendant's "misrepresentations were *material*." *Id.* at 248 n.27 (emphasis added). As noted above, the requirement that the alleged misstatement be material is an essential component of the fraud-on-the-market theory. An efficient market will react only to significant information; information that the market deems immaterial will be disregarded. Thus, a theory of reliance based on a misstatement's influence on the market must take into account the materiality of the alleged misstatement. Other courts applying *Basic* have consistently recognized materiality as a threshold requirement to invoking the fraud-on-the-market theory.[14]

---

[14] *See, e.g.*, *In re PolyMedica*, 432 F.3d at 8 n.11 ("plaintiff must prove . . . that the misrepresentations were material" (internal quotation marks omitted)); *In re Salomon*, 544 F.3d at 481 (same requirement); *Gariety*, 368 F.3d at 364 (same); *Freeman* v. *Laventhol & Horwath*, 915 F.2d 193, 197-98 (6th Cir. 1990) (same); *Gebhardt* v. *ConAgra Foods, Inc.*, 335 F.3d 824, 831 (8th Cir. 2003) (same); *Desai* v. *Deutsche Bank Sec. Ltd.*, 573 F.3d 931, 940 (9th Cir. 2009) (same); *see also Berks County Employees Ret. Fund* v. *First Am. Corp.*, 734 F. Supp. 2d 533, 539-41 (S.D.N.Y. 2010) (denying class certification where

In *Basic*, the Court defined material information as that which a "'reasonable shareholder would consider . . . important.'" *Id.* at 231 (quoting *TSC*, 426 U.S. at 449); *see also id.* at 234 ("[t]he role of the materiality requirement is . . . to filter out essentially useless information that a reasonable investor would not consider significant"). Although the Court did not further define the term, or examine its relationship to price impact in the context of market-based transactions, subsequent experience by the lower courts in fraud-on-the-market cases suggests an important refinement. In an impersonal, efficient market, prices are set by the trading of market participants attempting to capitalize on information affecting a company's value.[15] In such circumstances, the

---

plaintiff had "not demonstrated that defendants' alleged misstatements and omissions were material" and thus "could not avail itself of . . . the fraud-on-the-market doctrine"). The Seventh Circuit in *Schleicher* v. *Wendt* argues that such cases "misread[] *Basic*" by interpreting footnote 27 of that opinion as this Court's statement of the prerequisites for invoking the fraud-on-the-market theory, whereas the Court was merely reporting what the Sixth Circuit had required. *See* 618 F.3d at 687 (citing *Basic*, 485 U.S. at 248 n.27). It is the *Schleicher* view, however, that is mistaken. In footnote 27 of *Basic*, this Court did more than note the elements required by the Sixth Circuit; it commented that two of the elements—one of which was materiality—"may collapse into one," an evaluative comment that indicates the Sixth Circuit's analysis was otherwise appropriate.

[15] *See, e.g.*, *Basic*, 485 U.S. at 246 ("'The idea of a free and open public market is built upon the theory that competing judgments of buyers and sellers as to the fair price of a security brings [*sic*] about a situation where the market price reflects as nearly as possible a just price.'" (quoting H.R. Rep. No. 73-1383, at 11 (1934) (bracketed text in *Basic*))); *In re PolyMedica*, 432 F.3d at 9 (in efficient markets, "arbitrageurs immediately attempt to profit from [new] information . . . , thereby causing

inquiries into materiality and price impact converge: the market, standing in for the hypothetical "reasonable investor," determines whether information is material by reacting upward, downward, or not at all. Evidence that a given piece of information either did or did not move the price thus answers the question posed by the materiality inquiry: it shows whether the market considered the information important. Put another way, in the absence of price impact, the misstatement cannot be said to have substantively altered the relevant "'total mix' of information," *see TSC*, 426 U.S. at 449, and cannot support a claim that investors relied indirectly, through market price, on the alleged misstatement.

Based on this insight, the Third Circuit has "fashioned a special rule for measuring materiality in the context of an efficient securities market." *Oran* v. *Stafford*, 226 F.3d 275, 282 (3d Cir. 2000) (Alito, J.). The rule originated in *In re Burlington Coat Factory Securities Litigation*, where the Third Circuit recognized that in an efficient market, reasonable investors are, "in effect, the market" itself. 114 F.3d 1410, 1425 (3d Cir. 1997) (Alito, J.). Thus, "to the extent that information is not important to reasonable investors, it follows that its release will have a negligible effect on the stock price." *Id.* "As a result, when a stock is traded in an efficient market, the materiality of disclosed information may be measured post hoc by looking to the movement, in the period

---

the stock to move to a price which reflects the latest public information concerning the stock, where it is no longer possible to generate profits"); *Eckstein* v. *Balcor Film Invs.*, 8 F.3d 1121, 1129 (7th Cir 1993) ("Competition among savvy investors leads to a price that impounds all available information, even knowledge that is difficult to articulate.").

immediately following disclosure, of the price of the firm's stock." *Oran*, 226 F.3d at 282. The Third Circuit observed that "if a company's disclosure of information has no effect on stock prices, 'it follows that the information disclosed . . . was immaterial as a matter of law.'" *Id.* (quoting *Burlington*, 114 F.3d at 1425).[16]

The Third Circuit's rule substitutes the actual, observable workings of an efficient securities market—as typically measured by well-accepted statistical methods in event studies—for a judicial guess as to what a hypothetical reasonable investor might or might not find important. It thus promotes even-handed application of an analysis that otherwise "lies much in the eye of the beholder."[17] The "market reaction to corporate disclosure is often clearly superior to other available evidence of materiality" and "will likely provide the most compelling evidence of the information's materiality."[18] Rather than resorting to subjective measures of materiality—which result in subjective and unpredictable

---

[16] Because the Third Circuit does not view materiality as a prerequisite to a plaintiff's invocation of the fraud-on-the-market theory, that court has held that a defendant may rebut the presumption of reliance by showing that an alleged misstatement was immaterial, which in the Third Circuit means that the alleged misstatement did not affect the market price. *See In re DVI*, 2011 WL 1125926, at *7-8. However, as *Basic* dictates, and most other Circuits have recognized, it is plaintiffs who bear the burden of establishing that a misrepresentation was material before they may invoke the fraud-on-the-market theory. *See supra* note 14.

[17] Richard C. Sauer, *The Erosion of the Materiality Standard in the Enforcement of the Federal Securities Laws*, 62 Bus. Law. 317, 355 (2007).

[18] *Id.* at 325-26, 356.

outcomes[19]—in fraud-on-the-market cases it makes sense to determine materiality by reference to objective, reliable evidence of what the market deems important.[20]

In light of the advantages of defining materiality in the fraud-on-the-market context to include only information with a demonstrated impact on market price, the Court should take this opportunity to clarify the *Basic* definition accordingly. Such a definition is consistent with the fraud-on-the-market theory and the approach in *Basic* of adapting Rule 10b-5 requirements as appropriate to take into

---

[19] *See, e.g.*, *Litwin* v. *Blackstone Group, L.P.*, No. 09-4426-cv, 2011 WL 447050, at *10 (2d Cir. Feb. 10, 2011) (alleged misstatements were material because the court deemed them significant at a business segment level despite accounting for less than 5 percent of the registrant's total revenues); *Gebhardt*, 335 F.3d at 827-30 (corporate defendant's earnings misstatements could be material even though "the amount of earnings misrepresented was merely 0.4 per cent[] of [its] total revenues during the years in question" and "the problem was mostly one of having the money attributed to the wrong year, as opposed to not having ever made the money at all").

[20] Under the approach advocated here, the difficult and industry-specific issue addressed in *Matrixx Initiatives, Inc.* v. *Siracusano*, 79 U.S.L.W. 4187 (U.S. Mar. 22, 2011), *aff'g* 585 F.3d 1167 (9th Cir. 2009)—whether a plaintiff alleging fraud based on a drug company's failure to disclose the possibility of a drug's adverse side effects must allege that the side effects are supported by statistically significant data—could have been avoided. An approach to materiality based on the *market*'s determination of the importance of the side-effect information, as reflected by price movements, apparently would have yielded the same conclusion of materiality reached by the Court. *Id.* at 4189 (noting that stock price "plummeted" following national television segment about possible side effects); *see also* 585 F.3d at 1174 (stock fell 23.8% in one day).

account the realities of the "modern securities markets." 485 U.S. at 243.

2. Even if the Court reads *Basic* not to impose any obligation on a plaintiff to introduce evidence of price impact before invoking the presumption of reliance, there is good reason for the Court to amplify that *Basic* requires such proof.

The linchpin of the fraud-on-the-market theory is that investors are harmed when they buy stock in reliance on the integrity of a market price distorted by misrepresentations. When a misstatement has no effect on the market price, the integrity of the price remains unblemished, and investors cannot be said to have indirectly relied on the alleged misstatement. *See, e.g.*, *Nathenson* v. *Zonagen Inc.*, 267 F.3d 400, 419 (5th Cir. 2001) ("If the market price was not *actually* affected by the statement, reliance on the market price does not of *itself* become reliance on the statement.") In light of the centrality of price impact to the theory of indirect reliance, it is fair and appropriate that the party seeking to avail itself of that theory should carry the initial burden of presenting evidence of price impact.

Plaintiffs, after all, are the ones seeking the benefits of the fraud-on-the-market theory—and the benefits are hard to overstate. As described above, the fraud-on-the-market theory rewrote the common law of reliance in plaintiffs' favor. At common law, plaintiffs had the burden of showing direct reliance on a misstatement through individual proof. Under the fraud-on-the-market theory, plaintiffs enjoy an inference of indirect reliance that is triggered by common proof—making it possible to bring Rule 10b-5 class actions that wield enormous settlement pressure. In exchange for such advantages, it is

hardly asking too much for plaintiffs to show that the fraud-on-the-market theory applies to their case with evidence that the alleged misstatement moved the market.

III. THE FRAUD-ON-THE-MARKET THEORY SHOULD NOT BE EXTENDED BEYOND ITS DOCTRINAL FOUNDATION.

For the reasons explained above, the approach Petitioner advocates—permitting certification of a class of Rule 10b-5 claimants under the fraud-on-the-market theory without proof of price impact—represents a substantial departure from *Basic* and a relaxation of the requirements for invoking the fraud-on-the-market doctrine. In addition to being unwarranted by this Court's precedent, such a liberalization would exacerbate the problems posed by the theory and the uniquely powerful form of litigation it enables in conjunction with the implied private right of action under Rule 10b-5. Such expansion of the role of the theory is unwarranted in light of two decades' experience with *Basic*.[21]

Though it may have been supported by empirical studies that were "[r]ecent" when *Basic* was decided, *see* 485 U.S. at 246 & n.24, the efficient capital markets hypothesis on which *Basic* rested is no longer sound. Since that 1988 decision, a flood of "theoretical and empirical research that raises severe questions" about the hypothesis has all but washed

---

[21] This Court has recently expressed reluctance to further expand the Rule 10b-5 cause of action in another context. *See, e.g., Stoneridge Inv. Partners, LLC* v. *Scientific-Atlanta, Inc.*, 552 U.S. 148, 165 (2008) ("Though it remains the law, the § 10(b) private right should not be extended beyond its present boundaries.").

away its central premise, which no longer appears warranted. Jeff Schwartz, *Fairness, Utility, and Market Risk*, 89 Or. L. Rev. 175, 224 (2010).[22] And another pillar of *Basic*'s fraud-on-the-market theory—the assumption that most purchasers and sellers rely on a stock's price as an intrinsic reflection of its value (*see* 485 U.S. at 246-47)—has been undermined by experience. Recent research suggests that large numbers of traders (including momentum traders, program traders, and day traders) employ strategies that reflect little reliance, or no reliance whatever, on price as a measure of value.[23] At a minimum, the growing data casting doubt on the validity of the fraud-on-the-market theory counsel against watering down the showing required to obtain class certification using that theory.

---

[22] *See also, e.g.*, Frederick C. Dunbar & Dana Heller, *Fraud on the Market Meets Behavioral Finance*, 31 Del. J. Corp. L. 455, 471 (2006) ("The growing academic literature documenting violations of the efficient market hypothesis, along with the accumulated research on 'irrationality' of some investors, should prompt scholars, practitioners and regulators to examine the implications of these developments on securities law in general, and on the unchallenged applicability of fraud-on-the-market theory in particular."); Lawrence A. Cunningham, *From Random Walks to Chaotic Crashes: The Linear Genealogy of the Efficient Capital Markets Hypothesis*, 62 Geo. Wash. L. Rev. 546, 608 (1994) (recommending that "legal scholars and policymakers focus more closely on recent developments in mathematics and physics that call into question even the weak form" of the hypothesis).

[23] *See, e.g.*, Jill E. Fisch, *The Overstated Promise of Corporate Governance*, 77 U. Chi. L. Rev. 923, 955-56 (2010) (momentum trading); SEC Office of Compliance Inspections & Examinations, *Special Study: Report of Examinations of Day-Trading Broker-Dealers* (2000), *at* http://www.sec.gov/news/studies/daytrading.htm (day trading).

Absent a ruling by this Court emphasizing that the fraud-on-the-market theory must remain tethered to its original justifications, lower courts will likely continue to apply the theory in new and potentially unwarranted contexts. For example, although *Basic* applied the fraud-on-the-market theory only to the alleged misstatements of an issuer, as all of the prior appellate-court fraud-on-the-market cases had done, *see* Brief for the SEC as Amicus Curiae at 21 n.24, *Basic Inc.* v. *Levinson* (No. 86-279) lower courts have applied the theory in cases alleging misstatements by research analysts rather than issuers. *See, e.g.*, *In re Salomon*, 544 F.3d at 481; *In re Credit Suisse-AOL Sec. Litig.*, 465 F. Supp. 2d 34, 54 (D. Mass. 2006); *In re Enron Corp. Sec. Derivative & ERISA Litig.*, 529 F. Supp. 2d 644, 740-42 (S.D. Tex. 2006). The courts have done so despite good reason to believe that analyst statements often will have no impact on the market price.[24] Such unwarranted expansion of the fraud-on-the-market theory would be effectively curtailed by a ruling from this Court that the theory "may not be the basis for recovery in respect to an alleged misrepresentation which does not affect the market price of the security in question." *Nathenson*, 267 F.3d at 415.

---

[24] *See, e.g.*, Qi Chen et al., *The Applicability of the Fraud on the Market Presumption to Analysts' Forecasts*, at 30 (Duke Univ. Fuqua Sch. of Business Faculty Research Paper No. FRPS06-226, 2005), *at* http://faculty.fuqua.duke.edu/~qc2/bio/Research/FOTM.pdf (empirical study concluding that "most analysts, and most analysts' forecasts, have no material influence on share values"); Ambitabh Dugar & Siva Nathan, *Analysts' Research Reports: Caveat Emptor*, 5 J. Investing 13, 17 (1996) ("the market reaction to [analysts'] favorably biased reports is insignificant").

CONCLUSION

The judgment of the Court of Appeals should be affirmed.

INTEREST OF *AMICI CURIAE*[1]

When it enacted the Private Securities Litigation Reform Act of 1995 ("PSLRA"),[2] Congress expressed a preference that the investor with the largest financial interest should be appointed as the lead plaintiff in a securities-fraud class-action suit. *See* 15 U.S.C. § 78u-4(a)(3)(B)(iii) (creating a "rebuttable presumption" that person with the "largest financial interest in the relief sought by the class" will be appointed lead plaintiff). In doing so, Congress explained that it wanted "to increase the likelihood that institutional investors will serve as lead plaintiffs" and also its belief "that increasing the role of institutional investors in class actions will ultimately benefit the class and assist the courts." S. Rep. No. 104-98, at 11 (1995).

Amici public pension and retirement funds, which are listed by name in Appendix, *infra*, 1a, control more than $700 billion in invested assets on behalf of more than 4.8 million active and retired individual members and beneficiaries. As a result, *amici* and the individuals on whose behalf they invest have a substantial interest in the proper interpretation of the federal securities laws and in the application of the law and this Court's precedents to class-action

---

Pursuant to Rule 37.3(a), counsel for *amici* represent that all parties have filed letters with the Clerk giving blanket consent to the filing of *amicus* briefs.

[2] Pub. L. No. 104-67, 109 Stat. 737 (codified as amended in scattered sections of 15 U.S.C.).

lawsuits asserting federal securities-law claims, including an interest in ensuring that those laws are not interpreted and applied in a manner that prevents investors from recovering for real economic losses that have been caused by companies or individuals who have engaged in fraudulent and misleading activities in violation of the securities laws.

INTRODUCTION

Amici agree with petitioner that the court of appeals' rule requiring putative class plaintiffs to prove loss causation at the class certification stage is inconsistent with Federal Rule of Civil Procedure 23 and this Court's precedents. We submit this brief, however, to address a different aspect of the court of appeals' decision. In discussing the procedural rule as to what must be proved during class certification, the court, based at least in part on Fifth Circuit precedent, also announced a substantive rule regarding what a plaintiff must prove to show loss causation. *See* App. 121a-122a.

Amici respectfully submit that there is no need in this case for the Court to address whether the Fifth Circuit's discussion of the substantive requirements for proving loss causation is correct. Issues as to the appropriate standard for pleading and proving loss causation are not squarely before the Court, and the procedural issues regarding class certification can be resolved without touching upon the substantive loss-causation test. Because *amici* believe that the loss-causation standard applied by the court of appeals is contrary to this Court's holding in *Dura Pharmaceuticals, Inc. v. Broudo*, 544 U.S. 336 (2005), however, and because any endorsement of the court of appeals' substantive approach – even implicitly – would be severely detrimental to the interests of *amici* and

investors more generally, we write to explain why the Fifth Circuit's approach to loss causation is fundamentally at odds with *Dura* and, if addressed by this Court, should be rejected.

SUMMARY OF ARGUMENT

I. The Court made clear in *Dura* that the common-law concept of "proximate cause" is the appropriate standard for establishing loss causation in a securities-fraud case. 544 U.S. at 346. It held that, where plaintiffs allege that false or misleading statements caused them to purchase securities at an inflated price, they also must allege facts demonstrating that the stock price subsequently declined for reasons connected to the earlier misrepresentations – for example, because the "truth" had begun to "leak out" or had otherwise "ma[de] its way into the marketplace." *Id.* at 342. In so holding, the Court did not prescribe any particular type of information or "truth" that would have to be disclosed to the market regarding the prior representations in order to trigger loss causation.

In this case, the court of appeals announced a standard for proving loss causation that is contrary to *Dura* and that is far more restrictive than the "proximate cause" test adopted by this Court. The Fifth Circuit held that a securities-fraud plaintiff must show that the decline in a defendant's fraudulently inflated stock price followed a very specific type of "corrective disclosure" – essentially a disclosure by the company that admitted the actual falsity of its prior disclosures. *See* App. 121a (holding that "plaintiffs must prove the corrective disclosure shows the misleading or deceptive nature of the prior positive statements"). This rigid test would not allow plaintiffs to establish loss causation in cases where

the truth regarding the falsity of the prior representations began to "leak out" in more subtle ways that did not on their face admit that the prior statements were false. Nor would it permit recovery where the very risks that were concealed by the false statements were reasonably foreseeable consequences of those statements and later materialized to cause the stock's price to fall – a test some courts call the "materialization of the concealed risk." For example, where a company falsely inflates its financial statements and thereby conceals the risk that it soon will face insolvency, its subsequent bankruptcy filing would be a materialization of the risk that it previously had concealed, and investor losses would be recoverable under a proximate-cause theory. But, if the bankruptcy filing was not preceded by a "corrective disclosure" admitting that the prior financial statements were false, the Fifth Circuit's approach would deny recovery of even these reasonably foreseeable losses. That approach would lead to inequitable results.

The Fifth Circuit's erroneous standard also would create perverse incentives for companies that have engaged in securities fraud. Those companies arguably could insulate themselves from liability by refraining from correcting past misstatements or otherwise admitting their unlawful conduct until a time when the harmful effects of the past activity had already driven down their stock price – for example, waiting to admit to an accounting fraud until after they filed for bankruptcy or after they have suffered other financial harms that had been concealed by the past misleading statements.

Thus, not only is the Fifth Circuit's test fundamentally inconsistent with *Dura*, but numerous other

federal courts before and after *Dura* have refused to impose a similarly inflexible standard and have rejected arguments urging adoption of such an approach. Those courts apply a standard that is more in line with traditional notions of proximate cause.[3]

II. Application of a standard like the one imposed by the court below would deny recovery for legitimate investor losses proximately caused by false and misleading statements. Several real-world and hypothetical examples of securities frauds establish that point. Under the Fifth Circuit's "corrective disclosure" test, investors with otherwise meritorious claims wrongly would be denied recovery of real, reasonably foreseeable economic losses flowing from the fraud. Indeed, as discussed below, even investors who sustained losses as a result of the massive Enron fraud would be precluded from recovering the vast majority of those losses under the court of appeals' approach.

III. The Fifth Circuit's standard not only misstates the law, but also is unnecessary as a bright-line test to screen potentially frivolous suits. Other elements

---

[3] Although petitioner does not directly take on the Fifth Circuit's substantive loss-causation standard, it is apparent that it also agrees that loss causation is more complex than the rigid "corrective disclosure" standard articulated by the court below. Petitioner has argued why merits discovery is necessary for proof of loss causation. *See* Pet. Br. 55-56; *see also id.* at 50 (noting that "loss causation has been compared to the tort concept of proximate cause") (internal quotations omitted). Indeed, applying the proper standard for proving loss causation, it is even more apparent why the Fifth Circuit's procedural rule also is erroneous. Because the proximate-cause approach often will be fact-intensive and require discovery into complex issues about foreseeability and causation, those issues are particularly inappropriate for resolution during class certification.

of securities-fraud actions, including the heightened pleading requirements for scienter and the need to identify misstatements with particularity in accordance with the PSLRA, are more than adequate congressional safeguards against unmeritorious claims.

ARGUMENT

I. THE COURT OF APPEALS' RIGID STANDARD FOR PROVING LOSS CAUSATION IS CONTRARY TO THE HOLDING IN *DURA PHARMACEUTICALS V. BROUDO*

A. The Court Of Appeals' Holding Is Erroneous

In reaching its procedural holding that a putative class-action plaintiff must prove loss causation "at the class certification stage by a preponderance of all admissible evidence," App. 115a (internal quotations omitted), the Fifth Circuit also explained the substantive rule it applied to analyze whether petitioner had met the burden in this case. Relying on Fifth Circuit precedent,[4] the court held that, in addition to a showing that it purchased stock at an artificially inflated price, a plaintiff also must demonstrate a corrective disclosure admitting the falsity of prior representations following which the price of the stock declined. The court explained that, "[b]y relying on a decline in price following a corrective disclosure as proof of causation, a plaintiff need prove that its loss resulted directly *because* of the correction to a prior misleading statement." App. 116a-117a.

---

[4] Specifically as relevant to the loss-causation discussion, see *Alaska Electrical Pension Fund v. Flowserve Corp.*, 572 F.3d 221 (5th Cir. 2009) (per curiam); *Oscar Private Equity Investments v. Allegiance Telecom, Inc.*, 487 F.3d 261 (5th Cir. 2007); and *Greenberg v. Crossroads Systems, Inc.*, 364 F.3d 657 (5th Cir. 2004).

Particularly troubling was the court of appeals' articulation of the precise and very narrow type of information that would have to be disclosed to the public to trigger a decline in the stock price for which an investor could recover. The court held that, "[w]hen confronted with allegedly false financial predictions and estimates, the district court must decide whether the corrective disclosure more probably than not shows that the original estimates or predictions were designed to defraud." App. 122a. The court further explained that "plaintiffs must prove the corrective disclosure shows the misleading or deceptive nature of the prior positive statements" and that "the truth revealed by the corrective disclosure must show that the defendant more likely than not misled or deceived the market with earnings misstatements that inflated the stock price." App. 121a-122a.

Thus, under the Fifth Circuit's standard of loss causation, plaintiffs must show that defendant's stock price fell in response to the disclosure of the actual falsity of its prior statements and that those statements "were designed to defraud." App. 122a. Indeed, it is not enough under the court's standard that a stock price declines because of a subsequent disclosure of adverse underlying financial realities that previously were concealed by the fraud. Nor does it appear that the court's standard would permit information slowly to leak out in more subtle or less direct ways and thereby cause the stock price decline. Rather, the "corrective" disclosure itself must demonstrate that the prior statements were actually false when made and led directly to the price decline.[5]

---

[5] The standard the court of appeals articulated in this case appears to be even more restrictive than that articulated in the Fifth Circuit precedent that the court purported to apply. In

The court of appeals then applied its overly restrictive disclosure requirement to conclude that statements alleged to have related to such prior falsehoods nevertheless did not demonstrate that the prior statements were false. For example, although petitioner alleged that Halliburton's asbestos reserves had been intentionally understated, the court nevertheless concluded that Halliburton's subsequent announcements that it would increase those same reserves did not on their face "show that those prior reserve estimates were intentionally misleading." App. 126a. Thus, although Halliburton's increases to the same reserves caused a decline in the stock price, *see* App. 124a-125a, the court did not treat them as corrective disclosures and found no loss causation.

B. *Dura* Adopted A Traditional Proximate-Cause Analysis For Loss Causation That Is Inconsistent With The Court Of Appeals' Approach

In *Dura*, the Supreme Court addressed a split of authority that had developed in the circuit courts in the wake of *Basic Inc. v. Levinson*, 485 U.S. 224 (1988), as to what is required to prove loss causation

---

Oscar, the court held that plaintiffs must prove only that the subsequent disclosure of negative "'truthful'" information was "'related'" to the prior alleged false statements and "'that it is more probable than not that it was this negative statement, and not other unrelated negative statements, that caused a significant amount of the decline.'" 487 F.3d at 266 (quoting *Greenberg*, 364 F.3d at 666); *but see id.* at 270 (requiring "proof of a corrective disclosure's significant contribution to a price decline"). Similarly, in *Flowserve*, the court held that a plaintiff "is not required" to show that the market learned that prior statements were, in fact, fraudulent, and it rejected defendant's position that "a fraud causes a loss only if the loss follows a corrective statement that specifically reveals the fraud." 572 F.3d at 230-31.

in a fraud-on-the-market case. The Ninth Circuit in the *Dura* case had held that a securities-fraud plaintiff in such cases could prove that the defendant's fraud caused the plaintiff's economic loss by alleging only that the price of the security "*on the date of purchase* was inflated because of the misrepresentation." 544 U.S. at 338 (internal quotations omitted). Unlike the Ninth Circuit, however, the majority of the other circuits required plaintiffs to prove more than mere price inflation at the time of the purchase to establish loss causation. In those circuits, plaintiffs also would have to establish some connection between the fraud and the security's subsequent decline in value.[6]

The Supreme Court agreed with the majority of the circuits that the mere allegation that the fraud inflated the price of the security, without more, was insufficient to show loss causation. *See id.* at 342, 346. It held that, where the plaintiff's loss results from a stock price decline, the plaintiff must show that the decline was "proximately caused" by the fraud. *Id.* at 346. In reaching that conclusion, the Court observed the requirement under the PSLRA that the plaintiff bears the burden of proving that the defendant's fraud "caused the loss for which the plaintiff seeks to recover." 15 U.S.C. § 78u-4(b)(4). The Court also opined that securities-fraud actions "resemble in many (but not all) respects common-law deceit and misrepresentation actions." 544 U.S. at 343; *see also id.* at 345 (a securities claim is a "judicially implied cause of action with roots in the common law"). The

---

[6] *See, e.g., Emergent Capital Inv. Mgmt., LLC v. Stonepath Group, Inc.*, 343 F.3d 189, 198-99 (2d Cir. 2003); *Semerenko v. Cendant Corp.*, 223 F.3d 165, 184-85 (3d Cir. 2000); *Bastian v. Petron Res. Corp.*, 892 F.2d 680, 683-85 (7th Cir. 1990); *Robbins v. Koger Props., Inc.*, 116 F.3d 1441, 1447-49 (11th Cir. 1997).

Court then reviewed the relevant guidance in the Restatement (Second) of Torts (1977) ("Restatement"), which "set[s] forth the judicial consensus," 544 U.S. at 344, and other judicial and secondary sources concerning the common law's loss-causation requirements. This led the Court to conclude that securities-fraud plaintiffs must "allege and prove the traditional elements of causation and loss." *Id.* at 346.

Because the plaintiff in *Dura* had not pleaded anything more than the allegation that, because of defendant Dura's prior misrepresentations, the plaintiff had paid an "artificially inflated purchase price" for Dura's stock, the Court concluded that this was not itself a "relevant economic loss" and could not establish loss causation. *Id.* at 347. Missing from the complaint were any allegations that linked the subsequent decline in the stock price to Dura's misrepresentations. That is, the complaint failed to allege that "Dura's share price fell significantly after the truth became known." *Id.*

In holding that the plaintiff's allegations were insufficient, the Court explained what it had in mind that would be required to prove that a decline in the stock's price was proximately caused by a subsequent disclosure of the "truth" concerning the alleged misrepresentations -- that is, the disclosure of the underlying realities that had been concealed by the false statements. Rather than requiring any single statement or any particular type of corrective disclosure or content thereof, however, the Court recognized that loss causation could be shown from price declines where "the relevant truth begins to leak out" or where "the truth makes its way into the marketplace." *Id.* at 342. Likewise, the Court quoted the Restatement's discussion of the liability of "a person

who 'misrepresents the financial condition of a corporation in order to sell its stock.'" *Id.* at 344 (quoting Restatement § 548A cmt. b). The Restatement explains that a corporation becomes liable to an investor "for the loss that he sustains when the facts as to the finances of the corporation become generally known and as a result the value of the shares is depreciated on the market, because that is the obviously foreseeable result of the facts misrepresented." Restatement § 548A cmt. b.

The Fifth Circuit's standard cannot be reconciled with this Court's discussion and holding in *Dura*. The Fifth Circuit's rule requiring a specific "corrective disclosure" admitting the falsity of prior representations followed by a price decline is far more restrictive and narrow than this Court's recognition that relevant information might not be disclosed starkly in a single "correction," but instead could "leak out" over time and gradually "make[] its way into the marketplace."[7] As discussed below, *see infra* Part II, the court of appeals' standard would prevent recovery in numerous cases where investors incurred real losses as evidenced by declining stock prices caused by gradual or subtle revelations of facts that made it clear over time that a company's prior statements were false. Securities frauds can be extremely complex and can be "revealed" to the public in myriad ways. Thus, the related causation

---

[7] Similarly, at oral argument, Justice Breyer observed that the relevant truth concerning prior misstatements might "come[] out in subtle ways as well as direct ways." Oral Arg. Tr. at 54, *Dura* (Jan. 12, 2005) (No. 03-932), *available at* http://www.supremecourt.gov/oral_arguments/argument_transcripts/03-932.pdf.

issues cannot be pigeon-holed into one catch-all, inflexible rule like that imposed by the Fifth Circuit.

This Court's discussion in *Dura* makes it clear that the court of appeals' rigid approach is not what this Court had in mind.[8] By invoking the far more flexible common-law principles of proximate causation as the appropriate standard, this Court recognized that the standards for proving loss causation in securities cases are flexible enough to meet the particular facts of specific cases. Indeed, this Court previously has concluded that analysis of "proximate cause" is not limited to one particular approach, but instead is a common-law concept that takes "many shapes" and "reflects 'ideas about what justice demands, or of what is administratively possible and convenient.'" *Holmes v. Securities Investor Protection Corp.*, 503 U.S. 258, 268 (1992) (quoting W. Page Keeton et al., *Prosser and Keeton on the Law of Torts* § 41, at 264 (5th ed. 1984) ("*Prosser and Keeton*")). Commentators likewise have observed that "there are countless variations of theory in this area of the law" and that proximate causation's idea of a "foreseeable" harm is one of the law's more "flexible concepts." *Prosser and Keeton* § 42, at 273-74; *see id.* § 41, at 263 (noting

---

[8] The petitioners and several of their *amici* in *Dura* urged the Court to adopt the very same bright-line "corrective disclosure" approach that the Fifth Circuit has since imposed. *See* Brief for Petitioners at 14, 17, *Dura* (No. 03-932), 2004 WL 2075752; Brief of Washington Legal Foundation as *Amicus Curiae* in Support of Petitioners at 24, *Dura* (No. 03-932), 2004 WL 2069563 (arguing that "a plaintiff is required to plead that a corrective disclosure or disclosures removed the artificial inflation from the market price of the security and thereby caused an economic loss"). This Court opted, instead, for the more general proximate-causation standard and otherwise concluded that it "need not, and do[es] not, consider other proximate cause or loss-related questions." 544 U.S. at 346.

that, "despite the manifold attempts which have been made to clarify the subject," there is not "any general agreement as to the best approach"). As Justice Cardozo explained while still on the New York Court of Appeals, "[t]here is nothing absolute in the legal estimate of causation. Proximity and remoteness are relative and changing concepts." *Bird v. St. Paul Fire & Marine Ins. Co.*, 224 N.Y. 47, 55 (1918) (Cardozo, J.). The Fifth Circuit's "corrective disclosure" approach attempts to impose an inflexible standard in an area where flexibility is required.

Indeed, one of the illustrations in the section of the Restatement invoked by *Dura* plainly contradicts the Fifth Circuit's position that there must be a corrective disclosure revealing falsity of prior statements to establish causation:

> A, seeking to buy bonds for investment, approaches B. B offers A the bonds of X Oil Corporation, fraudulently misrepresenting its financial condition. In reliance upon these statements, A buys the bonds. After his purchase conditions in the oil industry become demoralized and as a result of financial losses the X Oil Corporation becomes insolvent. Because of the insolvency A suffers a pecuniary loss greater than that which would have resulted from the deterioration of conditions in the industry alone. It is found that if the financial condition of the Corporation had been as represented it would probably have weathered the storm and not become insolvent. B is subject to liability to A for the additional pecuniary loss resulting from the insolvency.

Restatement § 548A cmt. b, illus. 2. Nothing in the Restatement's approach requires a corrective disclo-

sure to precede the insolvency or other losses for the plaintiff to establish proximate cause.

Nor can the Fifth Circuit's application of the corrective-disclosure standard be justified by reliance on the discussion in *Dura* that recognized that not all subsequent price declines will be related to the prior misrepresentations. In *Dura*, the Court observed that such declines could be the result of "changed economic circumstances, changed investor expectations, new industry-specific or firm-specific facts, conditions, or other events," 544 U.S. at 343, essentially recognizing that intervening causes might, in some cases at least, sever the causal chain. The court of appeals' narrow definition of what constitutes a corrective disclosure led to its conclusion that even disclosures that were alleged to be closely related to the prior misrepresentations – for example, the understated asbestos reserves discussed, *supra*[9] – were, in effect, intervening causes that severed the causal chain. But, again, traditional concepts of proximate causation and intervening causes do not lend themselves to such a narrow approach.

As the Restatement section cited by this Court recognized, even where there are other intervening events *not caused by or related to* the original misstatements, that does not preclude recovery:

> In determining what is foreseeable as a result of the misrepresentation, the possibility of intervening events is not to be excluded altogether. Thus, when the financial condition of a corporation is misrepresented and it is subsequently driven into insolvency by reason of the depressed condition of an entire industry, which has no

---

[9] *See also* Pet. Br. 55.

> connection with the facts misrepresented, it may still be found that the misrepresentation was a legal cause of the recipient's loss, since it may appear that if the company had been in sound condition it would have survived the depression, and hence that a loss of this kind might reasonably have been expected to follow.

Restatement § 548A cmt. b; *see also Semerenko*, 223 F.3d at 186 ("It is well established that not every intervening cause is sufficient to break the chain of causation.").[10]

Because the Fifth Circuit failed to apply the traditional proximate-cause standard adopted by *Dura*, it also functionally concluded that subsequent disclosures made by Halliburton were intervening causes that prevented a finding of loss causation without considering, under the appropriate proximate-cause analysis, whether the prior false statements were a substantial cause of the stock decline.

C. A Number Of Other Federal Courts Have Refused To Apply This Unreasonably Narrow Standard For Proving Loss Causation

Both before and after *Dura*, a number of federal courts have considered similar loss-causation issues

---

[10] In any event, other circuits hold that, to plead loss causation, a securities-fraud plaintiff need not "plead that all of its loss can be attributed to the false statement of the defendant." *Caremark, Inc. v. Coram Healthcare Corp.*, 113 F.3d 645, 649 (7th Cir. 1997); *see Miller v. Asensio & Co.*, 364 F.3d 223, 232 (4th Cir. 2004) (holding that the PSLRA requirement to prove that a fraud caused damages "does not require a plaintiff to prove that the defendant's fraud was the *sole* cause of the plaintiff's loss"); *Semerenko*, 223 F.3d at 186-87 ("So long as the alleged misrepresentations were a substantial cause of the inflation in the price of a security and in its subsequent decline in value, other contributing forces will not bar recovery.").

and arguments in securities-fraud cases. These courts have concluded that economic loss can be established without proof of a specific corrective disclosure that admitted a prior false statement.

For example, the Tenth Circuit has held that, although "[l]oss causation is easiest to show when a corrective disclosure reveals the fraud to the public and the price subsequently drops," this is not required under *Dura*. *In re Williams Sec. Litig.—WCG Subclass*, 558 F.3d 1130, 1137 (10th Cir. 2009). As the *Williams* court observed, "*Dura* did not suggest that this was the only or even the preferred method of showing loss causation," because "it acknowledged that the relevant truth can 'leak out,' which would argue against a strict rule requiring revelation by a single disclosure." *Id.* (citation omitted).

The Second Circuit likewise has applied, since even before *Dura*, a loss-causation standard that more readily can accommodate the varying circumstances in which fraud occurs. Indeed, the standard within the Second Circuit is much more in line with the "proximate cause" standard that *Dura* endorsed than the narrow one adopted by the court of appeals here. In addition to recognizing cases where a corrective disclosure of fraud or falsity might directly cause a price decline and investor loss, the Second Circuit also recognizes the viability of loss-causation claims in situations where risks previously concealed by a defendant's false statements later materialize and cause share prices to drop.

In *Lentell v. Merrill Lynch & Co.*, 396 F.3d 161 (2d Cir. 2005), the court explained that "[w]e have described loss causation in terms of the tort-law concept of proximate cause, *i.e.*, 'that the damages suffered by plaintiff must be a foreseeable consequence of

any misrepresentation or material omission.'" *Id.* at 172-73 (quoting *Emergent Capital*, 343 F.3d at 197). And "a misstatement or omission is the 'proximate cause' of an investment loss if the risk that caused the loss was within the zone of risk *concealed* by the misrepresentations and omissions alleged by a disappointed investor." *Id.* at 173.[11] This is sometimes referred to as a "materialization of the concealed risk." *Id.*[12]

---

[11] *See also Schaaf v. Residential Funding Corp.*, 517 F.3d 544, 550-52 (8th Cir. 2008) (agreeing with *Lentell* that plaintiffs could prevail by proving that a loss "was foreseeable and caused by the materialization of the concealed risk"); *Teachers' Retirement Sys. of Louisiana v. Hunter*, 477 F.3d 162, 187 n.3 (4th Cir. 2007) (acknowledging "that a plaintiff could successfully allege loss causation by pleading that a previously concealed risk materialized, causing the plaintiff's loss"); *Bastian*, 892 F.2d at 685-86 (Posner, J.) (endorsing a loss-causation theory based on materialization of a risk concealed by earlier fraudulent statements).

[12] Although the majority of the circuits that have addressed the issue – including the Second, Fourth, Seventh, Eighth, and Tenth Circuits – have concluded that loss causation can be established even where there is not a corrective disclosure followed by a stock price decline, the law is less clear in the Sixth and Ninth Circuits. *See, e.g., Indiana State Dist. Council of Laborers & Hod Carriers Pension & Welfare Fund v. Omnicare, Inc.*, 583 F.3d 935, 944 (6th Cir. 2009) (holding that plaintiff's allegations did not "explain how the [prior] statements were revealed to be false and thereby caused a drop in the stock price"), *cert. dismissed*, No. 09-1400, 2010 WL 5638596 (U.S. Nov. 5, 2010). *But see Brown v. Earthboard Sports USA, Inc.*, 481 F.3d 901, 920 (6th Cir. 2007) (observing that "[l]oss causation . . . has been likened to proximate cause in tort law" and citing analysis in *Lentell* for risks that had been "concealed"). *Also compare Livid Holdings Ltd. v. Salomon Smith Barney, Inc.*, 416 F.3d 940, 949 (9th Cir. 2005) (holding loss causation was adequately alleged where plaintiff asserted defendants misrepresented the financial situation of the company, which "was

In *Suez Equity Investors, L.P. v. Toronto-Dominion Bank*, 250 F.3d 87 (2d Cir. 2001), the court applied that standard. Investors in a company alleged both that defendant concealed from them the principal executive's lack of managerial ability and that the risk inherent in his lack of abilities materialized when the company subsequently incurred liquidity problems and failed. *See id.* at 93-94. Although there was no "corrective disclosure" or admission that the prior representations were false, the Second Circuit nevertheless concluded that the plaintiffs adequately had alleged loss causation because the company's subsequent collapse and the plaintiffs' resulting damages "were a foreseeable consequence" of the concealed information. *Id.* at 96-98.

One district court in the Second Circuit explained the difference between the "corrective disclosure" and the "materialization of the risk" theories as follows:

> The classic example of a loss-inducing event is a corrective disclosure by the company itself. A corrective disclosure is traditionally an admission by the company that one or more of its previous statements were false or misleading followed by a corrected, truthful and complete version of those statements. The event need not take this form, however. The event could be a credit ratings downgrade or the collapse of the company. For an event to qualify as a materialization of the risk, it need only disclose part of the

---

directly related to the actual economic loss it suffered" when the company went bankrupt), *with In re Oracle Corp. Sec. Litig.*, 627 F.3d 376, 392 (9th Cir. 2010) ("Loss causation is established if the market learns of a defendant's fraudulent act or practice, the market reacts to the fraudulent act or practice, and a plaintiff suffers a loss as a result of the market's reaction.").

> truth that was previously concealed by the fraud. A ratings downgrade reveals the risk of deteriorating liquidity, and the failure to obtain agency approval may reveal the risk of a non-viable product. Unlike corrective disclosures, these events do not identify specific company statements as false or misleading. But if the company had previously concealed its liquidity condition or the failure of its product by making false or misleading statements, these events may be sufficiently related to the fraud to qualify as materializations of the risk.

In re Vivendi Universal, S.A. Sec. Litig., 634 F. Supp. 2d 352, 363-64 (S.D.N.Y. 2009) (citations and footnote omitted).

In *Vivendi*, the plaintiffs alleged that certain defendants through various false statements had concealed "massive amounts of debt" that posed a risk to the company's liquidity. *Id.* at 354. They also presented evidence that the company's "true liquidity condition" was subsequently revealed in a series of events – including downgrading of its credit ratings and unexpected asset sales. *See id.* at 356-57. Notwithstanding the court's conclusion that none of the subsequent events could be considered "corrective disclosures," it nevertheless held that the plaintiffs had sufficient evidence that those events were the materialization of the previously concealed liquidity problems to create genuine issues of fact for trial. *Id.* at 367-69.

Another instructive case is *In re Parmalat Securities Litigation*, 375 F. Supp. 2d 278 (S.D.N.Y. 2005), which involved a massive fraud and eventual collapse and bankruptcy of the Italian dairy conglomerate, a fraud "that reportedly involved the understatement

of Parmalat's debt by nearly $10 billion and the overstatement of its net assets by $16.4 billion." *Id.* at 282. Following the company's bankruptcy, a class of the company's investors sued the company's accountants for securities fraud. The defendants moved to dismiss, arguing, *inter alia*, that the plaintiffs had not adequately pleaded loss causation because they had not alleged that "a corrective disclosure about [the defendants'] prior misrepresentations caused the company's collapse." *Id.* at 305. But the court rejected the defendants' arguments. First, it observed that "[a]n allegation that a corrective disclosure caused the plaintiff's loss may be sufficient to satisfy the loss causation requirement. It is not, however, necessary." *Id.* (footnote omitted). It then noted that the plaintiffs had alleged that the defendants had misrepresented through their audit reports Parmalat's financial condition, and that "[a]mong the risks concealed by these reports was that Parmalat had massive undisclosed debt and was unable to service it." *Id.* at 306-07. The court concluded that "Defendants reasonably could have foreseen that Parmalat's inability to service its debt would lead to a financial collapse" and that "[t]he concealed risk materialized when Parmalat suffered a liquidity crisis . . . and was unable to pay bonds as they came due." *Id.* at 307. Thereafter, the company's share prices plummeted. Although the underlying fraud was not revealed until a few weeks *after* the shares became worthless,[13] the

---

[13] The bankruptcy filing was in late December 2003, and the opinion stated that "the true extent [of] the fraud was not revealed to the public until February – after Parmalat shares were worthless." 375 F. Supp. 2d at 284, 307. Although immediately prior to bankruptcy, and after the stock's trading had been suspended by Italian regulators, the company announced that a bank account it previously had disclosed "did not exist,"

court considered that "immaterial where, as here, the risk allegedly concealed by defendants materialized during that time and arguably caused the decline in shareholder and bondholder value." *Id.*

Finally, *In re Allaire Corp. Securities Litigation*, 224 F. Supp. 2d 319 (D. Mass. 2002), provides another example of a case where real economic loss was proximately caused by a company's false statements, but where the Fifth Circuit's approach would deny recovery. There, the plaintiffs alleged that Allaire, a publicly traded software company, made false statements about one of its software programs, knowingly concealing problems about that program and thereby "paint[ing] a rosy picture for the future" that depended on sales of the product. *Id.* at 323. The plaintiffs alleged that they paid inflated prices for Allaire's stock as a result. Subsequently, the stock price declined after Allaire disclosed poorer-than-expected sales, which the plaintiffs alleged was a result of the faulty product. *Id.* at 338. There was no "corrective disclosure" at the time of the stock price decline admitting that prior statements were false or even revealing the problems with the software. But the court concluded that the plaintiffs adequately had alleged loss causation because the information regarding the product defects "[o]bviously . . . would have impacted sales" and "[t]o suggest otherwise is to insult the Court's intelligence." *Id.* at 339.

As the foregoing examples illustrate, a number of courts before and after *Dura* have refused to apply

---

id. at 284, it is clear the court concluded there had been no corrective disclosures leading to the investors' losses. The facts also make clear that, even before trading had been suspended, the "company's stock had lost half its value" when the company could not meet its debt obligations. *Id.*

a loss-causation analysis that is as narrow and inflexible as that articulated by the Fifth Circuit.[14] Instead, they have implemented what *Dura* itself recognized – a "proximate cause" standard that, in the context of securities cases, does not lend itself to one catch-all fact pattern or approach. Indeed, it is apparent that in many of these cases involving real shareholder losses caused by fraudulent conduct, the Fifth Circuit's standard would deny them recovery.

Moreover, the Fifth Circuit's standard also would create perverse incentives for companies that have engaged in securities fraud. If those companies are liable only for declines in stock price that follow a specific type of corrective disclosure, they will have strong incentives to make more obscure disclosures that do not admit the falsity of prior statements or to delay admitting their prior misconduct until after the stock price has declined due to the materialization of the risks they concealed. This, in turn, would thereby allow securities-fraud violators to benefit from further misleading and deceptive conduct while avoiding the types of transparent communications the securities laws generally are designed to promote.

---

[14] Furthermore, and as noted above, even other panels in the Fifth Circuit have articulated the loss-causation standard in a far less rigid manner. *See supra* note 5.

II. THE INFLEXIBLE "CORRECTIVE DISCLOSURE" STANDARD ADOPTED BY THE COURT OF APPEALS WOULD PREVENT INVESTORS FROM RECOVERING LEGITIMATE LOSSES PROXIMATELY CAUSED BY CONDUCT PROHIBITED BY THE SECURITIES LAWS

As several cases above recognized, the "corrective disclosure" approach to loss causation may be appropriate in some circumstances. That is, the corrective-disclosure standard might be appropriate in cases that follow a clean pattern involving: (a) a false statement inflating the price of the stock; (b) a subsequent admission or correction of the prior false statement -- for example, a restatement of previous financial results, or a finding of fraud in connection with prior disclosures; and (c) a decline of the stock price shortly after the corrective disclosure.

But as is also clear from the foregoing cases, the corrective-disclosure approach is too rigid to apply in all cases. To the extent the court of appeals intended that this be the only method by which investors can prove loss causation, the Fifth Circuit announced far too rigid a standard. Relying exclusively on a rigid corrective-disclosure standard would preclude recovery in numerous other cases where there can be no doubt that substantial investor losses were proximately caused by securities fraud.

A couple of examples illustrate the point.

Bankruptcy. First, there will be cases where a company fraudulently misrepresents and inflates its financial condition in its financial statements and other disclosures. These inflated figures might conceal the reality that the company is, in fact, insolvent or in a precarious financial condition; and they might

lead investors reasonably to believe the company is a sound investment. By providing this misleading information, the company will have caused investors to pay inflated prices for its stock and also might have caused some investors to purchase stock that they would not have bought at all if the truth were known. In other words, there will be fraud-induced inflation inherent in the stock price. Under *Dura*, this alone would not establish loss causation.

But if the company could maintain the fiction only for so long and subsequently was forced to file for bankruptcy, most if not all of the fraudulent inflation of the stock price quickly would evaporate, and the stock would be left worthless or nearly worthless. Investors obviously would suffer real economic loss as a result. Assume, too, that investors could prove[15] that the prior inflation of the financial statements concealed the risk that later materialized – i.e., that, had the company not issued false statements, it would have been apparent that bankruptcy was likely.

For Scenario A, assume that the company's bankruptcy was not preceded by a "corrective disclosure" revealing that its prior statements were false. Indeed, in filing for bankruptcy, the company could blame changed economic conditions or any other number of factors – none of which would disclose that its financial representations *in the past* had been false. Perhaps only well after the filing of bankruptcy and the decline in the stock price would there

---

[15] Although there is an automatic stay upon the filing of a bankruptcy petition, *see* 11 U.S.C. § 362, investors could sue third parties who participated in the fraud (advisors to the company or others), or the bankruptcy trustee might seek to recover from culpable individuals on behalf of the company and its stakeholders.

be an investigation and announcement that there had been fraud affecting prior financial statements, or only later would the company restate those historical results. At the time of these corrective disclosures, however, there might be *no* further decline in the stock price, because the worthless stock could not decrease further. Under the Fifth Circuit's approach, the investors likely could not recover any or a substantial portion of their losses, because they could not show a stock price decline following the "corrective disclosure."

By contrast, under Scenario B, assume that, at the same time it filed for bankruptcy, the company issued a corrective disclosure regarding its prior representations, including a restatement of its financial statements and an admission of fraud in connection with them. Again the stock would decline precipitously, and this time investors likely could recover under the Fifth Circuit's theory of loss causation, because this decline would follow, rather than precede, the corrective disclosure.

The fact that investors could not recover in Scenario A, but could under Scenario B, yields incongruous results, and it demonstrates why the Fifth Circuit's approach is too rigid and narrow. The court's approach would preclude recovery for the investors in Scenario A even though they suffered *the exact same economic loss* as the investors in Scenario B, and even though it could be shown that the loss – the bankruptcy and the sharp decline in stock price – was the result of *the exact same prior misrepresentations*. The only difference would be the timing of the company's corrective disclosure, not the proximate cause of the investors' injury.

This example is not just hypothetical. The *Parmalat* case, discussed earlier, *see supra* pp. 19-21, among many others, is similar to this fact pattern, where there was no corrective disclosure before the company's collapse. Yet, unlike the holding in *Parmalat*, which concluded that the plaintiffs had alleged a viable claim for loss causation, the Fifth Circuit's standard would deny recovery to the investors in *Parmalat* entirely, notwithstanding that the alleged fraud inflated that company's assets and equity by *billions of dollars* and was alleged to have concealed the very risks that led directly to Parmalat's bankruptcy. That result makes no sense as either a legal or an economic matter.

Gradual Declines in Value. Another set of cases may involve situations where the company has falsely reported financial results for some period of time and it takes a while for the market to learn of the actual fraud – as opposed to receiving more innocent-sounding information that, in effect, reduces the fraudulent inflation of the company's stock price.

For example, assume that the company for several quarters inflates its revenue by improperly recording sales that should have been recorded in future periods – effectively "stealing" from the future to make current results look better than they really are. This intentional acceleration of revenue permits the company to continue to meet analysts' expectations and thereby fraudulently inflates the stock price. Again, investors purchase the stock at an inflated price but do not yet have a recoverable loss under *Dura*. Assume, however, that the company cannot continue fraudulently to accelerate its sales numbers forever – perhaps the scheme is becoming too big, and the culpable individuals fear they will be discovered.

But the company obviously does not want to admit to the scheme or to "correct" its previously filed public financial statements. As a result, it decides to "bleed" slowly the fraudulent excess off its financial statements, for example, by writing off false accounts receivables as uncollectible (rather than admitting they were fictional to begin with) or by reducing estimates of future income (rather than admitting that past income was falsely inflated). To avoid suspicion, the company takes these actions over several months or quarters.

All of these actions might be viewed negatively by the market and result in a steady decline in stock price. And all might relate directly to the prior false statements and inflation of revenues, although none would be a corrective disclosure that the company's past disclosures were false. Finally, assume that only *after* the company has successfully "bled" off the fraudulent excess – and after the company's stock price has adjusted down to the true, fraud-free value of the enterprise – is it revealed that there was fraud in connection with prior years' results. But because the market now is correctly valuing the company's stock based on results that are no longer fraudulently inflated, there might be little or no further decline in the stock price as a result of the correction of the historical results.[16] This is because, according to corporate finance theory, a company's stock price reflects the value of its anticipated *future* discounted

---

[16] Another way in which the company might prevent a stock decline following a "corrective" disclosure is to couple the bad news with positive developments, such that the bad news is effectively diluted.

cash flows,[17] and the company's previous "leakage" of its losses already would have provided the market with sufficient information with which to judge those cash flows.

Again, the Fifth Circuit's standard would deny recovery in these circumstances, notwithstanding that there are real, reasonably foreseeable economic losses as evidenced by investors' overpayment for fraudulently inflated stock and the subsequent loss in value as the fraud is bled off the books. But because there was no single corrective disclosure or even a series of disclosures preceding the decline in the stock's value, there would be no loss causation.

This hypothetical scenario again is not far from the facts of cases discussed previously, including *Vivendi*, *see supra* pp. 18-19, where the company had fraudulently concealed massive amounts of debt and then subsequent events – like the downgrade in its credit ratings and disposition of its assets – drove down the stock price prior to any correction of historical statements or results.[18]

---

[17] *See, e.g., Glassman v. Computervision Corp.*, 90 F.3d 617, 626 (1st Cir. 1996) (holding that a securities "[p]rice can be characterized as a present value calculation of the firm's future streams of earnings or dividends"); *In re VeriFone Sec. Litig.*, 784 F. Supp. 1471, 1479 (N.D. Cal. 1992) ("[S]ecurities prices on the national exchanges reflect . . . the expected future cash flows from the security."), *aff'd*, 11 F.3d 865 (9th Cir. 1993); *see also* Richard A. Brealey & Stewart C. Myers, *Principles of Corporate Finance* 63 (4th ed. 1991) ("Value today always equals future cash flow discounted at the opportunity cost of capital.").

[18] This was also the case in *Danis v. USN Communications, Inc.*, 73 F. Supp. 2d 923 (N.D. Ill. 1999), where the court rejected the defendants' argument that the plaintiff could not prove loss causation when the stock price did not drop upon the company's disclosure of its "true financial state," because it was

Indeed, one of the largest financial frauds in history, Enron, unwound in a similar fashion, where the fraudulently inflated stock price declined over time in reaction to events and information that would not be considered corrective disclosures. In the process, tens of billions of dollars of stakeholder investments evaporated. Enron's stock price peaked at more than $90 per share in August 2000.[19] Throughout the first three quarters of 2001, however, that price declined on various bad news and rumors regarding its operations, including, for example, discussion of "payment issues" involving a power plant in India, layoff rumors involving its broadband business, revelation that the broadband unit was not going to grow as fast as predicted, and other general questions about its ability to sustain its historic growth rate.[20] One particularly large stock price drop came in August 2001, when CEO Jeffery Skilling announced his resignation for "purely personal reasons," resulting in an approximate 7% drop in the stock price in a single day.[21] Skilling was later exposed and indicted as one of

---

alleged that "the market responded to and 'corrected' the price of [the] stock over the better part of a year as bits and pieces of negative information became available and it became apparent that [the company] was not capable of performing as originally represented." *Id.* at 943.

[19] *See* Andrew Kelly, *Enron Stock Falls Sharply After CEO's Resignation*, Reuters (Aug. 15, 2001).

Bryson Hull, *Enron Seeks To Assuage Investor Fears of Broadband*, Reuters (Mar. 23, 2001); *Chronicle 100 Leading Companies of Houston*, Hous. Chron., May 20, 2001, at 8; Christian Berthelsen, *Texas Power Firm's Shares Falling*, S.F. Chron., June 22, 2001, at B1.

[21] Mark Golden, *'Personal Reasons'? Top, You're Skilling Me*, Dow Jones Energy Serv. (Aug. 17, 2001).

the chief perpetrators of the Enron fraud.[22] And the fraud he helped to create and perpetuate plainly concealed the risk that eventually materialized – that he would be forced out of the company as it all began to unravel. But his fellow co-conspirator, Kenneth Lay, at the same time continued to perpetuate the fraud and provided assurances that all was well at Enron, characterizing Enron's business as "strong."[23]

From February 1, 2001, to late August of that year, Enron's stock slid from approximately $80 per share to $43, an approximate 46% decline that was estimated to wipe cut some $28 billion in shareholder value.[24] When the company announced in October 2001 that it was taking a charge to earnings and equity of more than $1 billion, the stock was trading at less than $25 per share.[25] Yet there still had been no "corrective disclosure" of the massive accounting fraud at Enron or that prior reported results were false. On October 22, 2001, after tens of billions of investors' dollars already had been lost, Enron announced that the United States Securities and Exchange Commission ("SEC") was conducting an informal inquiry into certain related-party transactions. This was arguably the first "corrective disclosure" that there was potential improper activity,

---

[23] *See* C. Bryson Hull, *Enron Head Seeks To Reassure Staff at Meeting*, Reuters (Aug. 16, 2001).

[24] *See* James Norman, *Doubts Linger on Enron After CEO's Exit*, Platt's Oilgram News, Aug. 21, 2001, at 1.

[25] *See* Andrew Bary, *Yes, This Year's Punk Earnings Do Matter To Investors*, Dow Jones Int'l News (Oct. 20, 2001); Peter Edmonston, *Stocks Close Higher As Investors Cheer Earnings News*, Dow Jones Bus. News (Oct. 22, 2001).

though even then Enron stated that its actions had been proper.[26] On October 31, 2001, Enron disclosed that the SEC inquiry had become a full-scale investigation.[27] Following further deterioration in the stock, the company finally collapsed and filed for bankruptcy in December 2001.[28]

Even assuming that the late October 2001 announcement of an SEC inquiry would qualify as a "corrective disclosure" after which investors could recover for the remaining decline in stock price, it is clear that the Fifth Circuit's standard would prevent Enron's investors from recovering the vast majority of their losses. The Enron debacle readily reveals why this Court should reject the Fifth Circuit's standard.

III. THE PROXIMATE-CAUSE STANDARD AND PSLRA PLEADING REQUIREMENTS FOR OTHER ELEMENTS OF A FEDERAL SECURITIES-FRAUD VIOLATION ARE SUFFICIENT TO SCREEN FRIVOLOUS CLASS-ACTION SUITS

The Fifth Circuit's rigid approach cannot be justified on policy grounds or based on an argument that a more stringent loss-causation requirement is necessary to screen out unmeritorious suits. In addition to the fact that such policy determinations are for Congress, not the courts, to make, Congress already

---

[26] *See Enron Shares Drop on SEC Probe*, CBS MarketWatch (Oct. 22, 2001); Rebecca Smith & John R. Emshwiller, *Enron May Issue More Stock to Cover Obligations*, Wall St. J., Oct. 24, 2001, at A2.

[27] Jeff Franks, *Enron Says SEC Inquiry Now Full-Scale Probe*, Reuters (Nov. 1, 2001).

[28] Elizabeth Lazarowitz, *U.S. Stocks Struggle with Enron, Mid-East Turmoil*, Reuters (Dec. 3, 2001).

has imposed, and this Court already has recognized, other elements of securities-fraud actions that accomplish the screening objective.[29] In *Dura* itself, the Court recognized that the PSLRA requires securities-fraud plaintiffs to "'specify' each misleading statement; that they set forth the facts 'on which [a] belief' that a statement is misleading was 'formed'; and that they 'state with particularity facts giving rise to a strong inference that the defendant acted with the required statement of mind'" – i.e., scienter. 544 U.S. at 345 (quoting 15 U.S.C. § 78u-4(b)(1), (2)) (alteration in original). As this Court also has recognized, the requirement to plead elements like scienter with particularity and in a manner that "giv[es] rise to a strong inference that the defendant acted with the required state of mind" is a requirement with some teeth. *See Tellabs, Inc. v. Makor Issues & Rights, Ltd.*, 551 U.S. 308, 323-24 (2007). Moreover, at summary judgment, the courts can hold plaintiffs to rigorous standards for proving loss causation in complex cases, requiring expert testimony and detailed analyses of movements in stock prices. *See, e.g.*, *Williams*, 558 F.3d at 1136-43 (analyzing plaintiffs' expert report at length under the materialization-of-the-risk approach and affirming grant of summary judgment on finding of no loss causation).

Although the PSLRA requires a securities-fraud plaintiff to prove that the defendant's fraudulent conduct "caused the loss for which the plaintiff seeks to recover," 15 U.S.C. § 78u-4(b)(4), there is no justification or need for imposing an inflexible and narrow loss-causation standard that is far more

---

[29] These elements generally are evaluated at the motion to dismiss and summary judgment stages, not at class certification.

restrictive than the "proximate cause" standard adopted by this Court in *Dura* and applied by various other federal courts.

CONCLUSION

The judgment of the court of appeals should be reversed.

QUESTIONS PRESENTED

Whether the court of appeals correctly affirmed the district court's denial of class certification where the evidence showed that the alleged misrepresentations had no impact on the company's stock price.

TABLE OF CONTENTS

Page

TABLE OF AUTHORITIES v

INTERESTS OF *AMICUS CURIAE* 1

STATEMENT OF THE CASE 2

SUMMARY OF ARGUMENT 4

ARGUMENT 8

I. IN ASSESSING PREDOMINANCE, THE DISTRICT COURT PROPERLY CONSIDERED HALLIBURTON'S EVIDENCE THAT ALLEGED MISREPRESENTATIONS HAD NO IMPACT ON ITS STOCK PRICE 8

A. *Basic* Established "Materiality" as a Prerequisite for Recognition of a Presumption of Class-Wide Reliance 8

B. The Right of Rebuttal Endorsed by *Basic* Is Quite Broad and Encompasses the Proceedings in the Courts Below 12

II. THE DISTRICT COURT PROPERLY GRANTED HALLIBURTON AN OPPORTUNITY FOR REBUTTAL AT THE CLASS CERTIFICATION STAGE ... 15

Page

A. Certification of a Class Is Improper Unless the Movant Demonstrates By a Preponderance of the Evidence That He Has Met All the Requirements of Rule 23, Including Predominance 15

B. That Reliance and Materiality Are Also Merits Issues Does Not Diminish the Importance of Examining Those Issue Closely in Connection with a Determination of Whether Petitioners Can Show Predominance 17

III. BECAUSE CLASS CERTIFICATION DECISIONS ARE SO OFTEN OUTCOME-DETERMINATIVE, THE COURT SHOULD BE PARTICULARLY VIGILANT IN ENFORCING STRICT ADHERENCE TO RULE 23 26

CONCLUSION 29

INTERESTS OF *AMICUS CURIAE*

The Washington Legal Foundation (WLF) is a non-profit public interest law and policy center with supporters in all 50 states.[1] WLF devotes a substantial portion of its resources to defending free-enterprise, individual rights, and a limited and accountable government.

To that end, WLF has appeared before this and other federal courts in numerous cases raising issues related to the proper scope of the federal securities laws. *See, e.g., Matrixx Initiatives, Inc. v. Siracusano*, ___ U.S. ___, 2011 U.S. LEXIS 2416 (Mar. 22, 2011), *Morrison v. Nat'l Australia Bank Ltd.*, 130 S. Ct. 2869 (2010); *Stoneridge Inv. Partners, LLC v. Scientific Atlanta, Inc.*, 532 U.S. 148 (2008); *Dura Pharms., Inc. v. Broudo*, 544 U.S. 336 (2005). WLF has also participated extensively in litigation in support of its view that federal courts should not certify cases as class actions unless the plaintiffs can demonstrate that they have satisfied each of the requirements of Rule 23 of the Federal Rules of Civil Procedure. *See, e.g., Wal-Mart Stores, Inc. v. Dukes, cert. granted*, 131 S. Ct. 795 (2010).

WLF agrees with Respondent that the evidence before the district court demonstrated that the alleged misrepresentations had no impact on Halliburton's stock price and thus that Petitioners failed to demonstrate that they met Rule 23(b)(3)'s

---

[1] Pursuant to Supreme Court Rule 37.6, WLF state that no counsel for a party authored this brief in whole or in part; and that no person or entity, other than WLF and its counsel, made a monetary contribution intended to fund the preparation and submission of this brief. All parties have consented to this filing; letters of consent have been lodged with the Court.

predominance requirement. WLF writes separately because it takes particular issue with the assertion of Petitioners and the United States that Respondents are not permitted, at the class certification stage, even to attempt to rebut the presumption of reliance created by the fraud-on-the-market theory. That assertion is directly contrary to *Basic, Inc. v. Levinson*, 485 U.S. 224 (1988), which explicitly authorized defendants to attempt to defeat class certification by introducing evidence that the market did not, in fact, rely on the alleged misrepresentations. *Basic* has been settled law for more than two decades; WLF believes that if Petitioners and the United States seek to overturn *Basic*, they should take their case to Congress. WLF also believes that any such change would be inappropriate because it would substantially reduce the ability of class action defendants to resist class certification and thereby increase the already enormous pressure they face to settle the suits without regard to the underlying merits.

STATEMENT OF THE CASE

Petitioners purport to represent a class consisting of purchasers of Halliburton Co. common stock during a 2 1/2-year period (June 1999 to December 2001). They allege that Respondents (collectively, "Halliburton") violated federal securities laws by making material misrepresentations regarding the company's financial condition, and that they suffered losses after the company's true financial condition was revealed.

Five years after suit was filed, and after extensive discovery, the district court denied Petitioners' motion

to certify the class. Pet. App. 3a-55a. The parties agreed that Halliburton stock traded in an "efficient market." *Id.* at 5a. However, after considering substantial expert testimony from both Petitioners and Halliburton, the court concluded that Petitioners were not entitled to a presumption of reliance because they had failed to demonstrate that the alleged misrepresentations had an effect on Halliburton's stock price. *Id.* at 3a-55a. In the absence of such a presumption, reliance would need to be demonstrated on a individual basis, and thus Petitioners could not meet their evidentiary burden under Fed.R.Civ.P. 23(b)(3), which requires a party seeking class certification to demonstrate that "the questions of law or fact common to class members predominate over any questions affecting only individual members.

The Fifth Circuit affirmed. Pet. App. 111a-136a. The court held that a plaintiff may create a "rebuttable presumption of reliance" under the fraud-on-the-market theory by showing that: (1) the defendant made public *material* misrepresentations; (2) the defendants shares were traded in an efficient market; and (3) the plaintiff traded shares between the time the misrepresentations were made and the time the truth was revealed. *Id.* at 114a. It further held that a defendant resisting certification may seek to rebut the presumption "by any showing that severs the link between the alleged misrepresentation and either the price received (or paid) by the plaintiff, or his decision to trade at fair market price." *Id.* at 114a-115a.

Because Halliburton introduced evidence designed to sever the link between the alleged

misrepresentation and the price paid by Petitioners for their stock, the appeals court examined that issue. It explained that the requisite causal connection could be established in one of two ways: (1) an increase in stock price immediately following release of the alleged misrepresentations; or (2) a decrease in stock price following disclosure of the alleged "truth" regarding the earlier falsehood. *Id.* at 116a. Petitioners sought to demonstrate the link by employing the second option. The appeals court concluded, however, that the evidence presented to the district court failed to demonstrate such a link. *Id.* at 123a-136a. Accordingly, the court concluded that a presumption of reliance was inappropriate, and it affirmed the district court's denial of class certification. *Id.*

SUMMARY OF ARGUMENT

A party seeking certification of a class action must demonstrate by a preponderance of the evidence that he has met all the requirements of Fed.R.Civ.P. 23. In a Rule 23(b)(3) class action such as this one, those requirements include a showing that common issues of law or fact "predominate" over questions affecting only individual class members. But because plaintiffs in a securities fraud lawsuit must establish that they relied on the defendant's misrepresentation, the predominance requirement can never be met if the plaintiffs must prove reliance on a plaintiff-by-plaintiff basis – because under those circumstances, individual issues of fact would overwhelm common issues. Thus, a securities fraud lawsuit will never be an appropriate candidate for class action treatment unless the plaintiffs can demonstrate an entitlement to a presumption of

reliance under the fraud-on-the-market theory. In sum, whether a presumption of reliance is appropriate is a pivotal Rule 23 issue; certification of a class in a securities fraud lawsuit will never be warranted in the absence of that presumption.

This Court has directed district courts, when deciding whether to certify a class, to undertake a "rigorous analysis" of whether the moving party has met *all* the requirements of Rule 23, and to do so regardless whether that analysis entails an examination of issues that relate to the merits of the plaintiff's lawsuit. Accordingly, when Halliburton proffered evidence designed to demonstrate that a presumption of reliance (and thus, class certification) was inappropriate, both the district court and the Fifth Circuit appropriately undertook a "rigorous analysis" of that evidence.

In seeking reversal, Petitioners make two principal assertions. First, they assert that some of the issues addressed by the lower courts are not appropriately considered in determining whether the defendant has successfully rebutted the presumption of reliance. Second, Petitioners assert that any rebuttal should be delayed until summary judgment or trial and is not appropriately considered in connection with a motion for class certification. Both assertions directly conflict with *Basic* as well as with the great majority of courts of appeals that have considered the issue.

Petitioners claim that *Basic* authorized courts to apply a rebuttable presumption of class-wide reliance based on the plaintiff's showing that "defendants made

public misrepresentations, the company's stock traded in an efficient market, and plaintiffs traded shares after the misrepresentation and before the truth was revealed." Pet. Br. 27. That claim is inaccurate; *Basic* stated that the plaintiff must *also* show that the misrepresentation was "material." *Basic*, 485 U.S. at 241-42, 246-48 & n.27. One of the best ways for a defendant to demonstrate that an alleged misrepresentation was not "material" is, of course, to demonstrate that it had no impact on the company's stock price. After considering the extensive evidence submitted by both sides regarding stock-price impact, the lower courts determined that there was no such impact here – and thus properly concluded that Petitioners were not entitled to a presumption of reliance.

Petitioners' argument that a defendant's rebuttal evidence should not be heard at the class certification stage is similarly unavailing. "Materiality" is, of course, a merits issue that will be determined at trial and that is capable of being decided on a class-wide basis. But as *Basic* makes clear, materiality is also an essential element of the showing that must be made before a plaintiff is entitled to a presumption of reliance. Simply because an issue is merits-based and/or is capable of being decided on a class-wide basis is not a reason to excuse a plaintiff seeking Rule 23(b)(3) class certification from demonstrating class-wide reliance – and thereby demonstrating compliance with Rule 23(b)(3)'s predominance requirement.

Petitioners seek to portray the Fifth Circuit as an outlier among the federal appeals courts. To the

contrary, the two principal features of the Fifth Circuit's class-certification jurisprudence – permitting defendants to present rebuttal evidence at the certification stage and focusing on whether the alleged misrepresentation actually had an impact on stock price – place the Fifth Circuit well within the mainstream among federal appeals courts. Indeed, the Third Circuit issued an opinion just this week making clear that it stands firmly with the Fifth Circuit on those two issues. *In re: DVI, Inc. Securities Litigation*, ___ F.3d ___, 2011 U.S. App. LEXIS 6302 (3d Cir., Mar. 29, 2011). Only the Seventh Circuit disagrees with the Fifth Circuit on these issues; it stands as the real outlier. *See Schleicher v. Wendt*, 618 F.3d 679 (7th Cir. 2010).

The Fifth Circuit diverges somewhat from other circuits regarding the strength of the presumption created by *Basic* and what the defendant must do to overcome that presumption. The Fifth Circuit has concluded that the presumption disappears the moment the defendant makes "any showing" that severs the link between the misrepresentation and the plaintiffs' loss, and that the defendant need not go on to carry the ultimate burden of persuasion regarding the existence or non-existence of the link. *Oscar Private Equity Investments v. Allegiance Telecom, Inc.*, 487 F.3d 261, 265 (5th Cir. 2007). Some other appeals courts have concluded that *Basic* created a stronger presumption and have required defendants to make a correspondingly greater showing in order to defeat the presumption of reliance. But the Court's resolution of that issue should not affect the ultimate disposition of this case because the denial of class certification in this case was based on the lower courts' determination –

after reviewing extensive evidence submitted by both sides – that Halliburton's alleged misrepresentations did not affect the price of Halliburton's stock. In other words, the outcome would have been the same even if the lower courts had imposed a greater evidentiary burden on Halliburton.

ARGUMENT

I. IN ASSESSING PREDOMINANCE, THE DISTRICT COURT PROPERLY CONSIDERED HALLIBURTON'S EVIDENCE THAT ALLEGED MISREPRESENTATIONS HAD NO IMPACT ON ITS STOCK PRICE

A. *Basic* Established "Materiality" as a Prerequisite for Recognition of a Presumption of Class-Wide Reliance

Petitioner mistakenly asserts that *Basic* "adopted" the fraud-on-the-market theory. Pet. Br. 4. To the contrary, the Court explicitly declined to "assess the general validity of the theory." *Basic*, 485 U.S. 242.[2] Rather, the Court concluded that the theory supported application of a "rebuttable presumption of reliance"

---

[2] The Court explained the theory as follows: "The fraud on the market theory is based on the hypothesis that, in an open and developed securities market, the price of a company's stock is determined by the available material information regarding the company and its business. . . . Misleading statements will therefore defraud purchasers of stock even if the purchasers do not rely on the misstatements." *Id.* at 241-42 (quoting *Peil v. Speiser*, 806 F.2d 1154, 1160-61 (3d Cir. 1986)).

when a plaintiff makes the requisite showings, *id.*, and thus that "[i]t is not inappropriate" for a district court to apply the presumption, subject to rebuttal. *Id.* at 250.

In Footnote 27, the Court approvingly cited the items the appeals court had required a plaintiff to prove in order to invoke the presumption of reliance:

> The Court of Appeals held that in order to invoke the presumption, a plaintiff must allege and prove: (1) that the defendant made public misrepresentations; (2) that the misrepresentations were *material*; (3) that the shares were traded on an efficient market; (4) that the misrepresentation would induce a reasonable, relying investor to misjudge the value of the shares; and (5) that the plaintiff traded the shares between the time misrepresentations were made and the time the truth was revealed. See 786 F.2d, at 750.
>
> Given today's decision regarding the definition of materiality as to preliminary merger discussions, elements (2) and (4) may collapse into one.

Id. at 248 n.27 (emphasis added).[3] The second paragraph of Footnote 27 indicates that the Court

---

[3] As the second paragraph in Footnote 29 indicates, the *Basic* decision addressed two separate issues: (1) whether the defendant was entitled to summary judgment on the ground that information regarding potential mergers should not be deemed material; and (2) whether the plaintiff was entitled to class certification based on a presumption of market-wide reliance.

approved of the appeals court's prerequisites for invoking the presumption of reliance. The statement that "elements (2) and (4) may collapse into one" suggests that information regarding "preliminary merger discussions" should be deemed "material" if it would induce "reasonable, relying investors to misjudge the value of the shares." But Footnote 27 makes reasonably clear that the Court deemed materiality of the misrepresentation to be an essential element of any effort to invoke the presumption of reliance.

That interpretation of Footnote 27 is strongly reinforced by repeated references to "materiality" throughout the Court's opinion. For example, in defining the fraud-on-the-market theory, the Court explained that the theory "is based on the hypothesis that, in an open and developed market, the price of a company's stock is determined by the available *material* information regarding the company and its business." *Id.* at 241. In other words, information that is not material will have no effect on stock price. The Court also stated:

> The presumption [of reliance] is also supported by common sense and probability. Recent empirical studies have tended to confirm Congress' premise that the market price of shares traded on well-developed markets reflects all publicly available information, and, hence, any *material* misinformation.

Id. at 246. The clear implication of the quoted language is that the Court deemed materiality an essential element of any effort to invoke the presumption of

reliance. The presumption is not appropriate in cases in which misinformation is not material because such misinformation can have no effect on market price.

Other federal appeals courts have interpreted *Basic* as precluding a presumption of reliance when the alleged misrepresentation is determined to be immaterial. The Third Circuit recently stated that evidence that the defendant's "statements were immaterial [is] a distinct basis for rebuttal." *In re: DVI*, 2011 U.S. App. LEXIS at *36. The Second Circuit interprets *Basic* as imposing on plaintiffs the burden of demonstrating that the alleged misrepresentation is "material," and "a prima facie showing will not suffice to meet that burden." *In re: Salomon Analyst Metromedia Litigation*, 544 F.3d 474, 481 (2d Cir. 2008). If that burden is met, the Second Circuit permits the defendant to rebut the presumption of reliance by "show[ing] that the allegedly false statements did *not* measurably impact the market price of the security." *Id.* at 486 n.9.

The Seventh Circuit is the outlier; it is the only federal appeals court that has rejected the relevance of materiality to the presumption of reliance. *Schleicher*, 618 F.3d at 687 (criticizing *Salomon Analyst* and *In re PolyMedica Corp. Securities Litigation*, 432 F.3d 1, 8 n.11 (1st Cir. 2005), for imposing "materiality as a condition to class certification"). The Seventh Circuit interpreted Footnote 27 in *Basic* as merely stating that the appeals court had deemed materiality essential, not that the Court itself reached the same conclusion. *Id.* That interpretation fails to explain *Basic*'s other references to materiality (cited above). The Seventh

Circuit also argued that by the Second Circuit's logic, proof that the defendant's statements were false must also be a condition of class certification (because the existence of a "misrepresentation" is also an element listed in Footnote 27), yet no court has ever so held. *Id.* But that effort to draw a parallel between materiality and falsity makes little sense; the former bears a close relationship with reliance, the latter does not. Material statements are by definition ones on which reasonable people are likely to rely. In contrast, the likelihood that reasonable people will rely on a statement is poorly correlated with whether the statement is true or false. Reasonable people will rely on a material and seemingly authoritative statement, regardless whether the statement is true or false. Accordingly, the most reasonable interpretation of *Basic* is that entitlement to a presumption of reliance requires the plaintiff, as part of class certification, to show materiality but not falsity.

B. The Right of Rebuttal Endorsed by *Basic* Is Quite Broad and Encompasses the Proceedings in the Courts Below

While endorsing adoption of a rebuttable presumption of reliance in appropriate cases, *Basic* made clear that defendants are entitled to attempt to rebut that presumption and thereby demonstrate the absence of predominance. The Court said:

> Any showing that severs the link between the alleged misrepresentation and either the price received (or paid) by the plaintiff, or his decision to trade at a fair price, will be sufficient to rebut

> the presumption of reliance. For example, if [the defendant] could show that the "market makers" were privy to the truth about the merger discussions . . ., and thus that the market price would not have been affected by their misrepresentation, the causal connection could be broken; the basis for finding that the fraud had been transmitted though market price would be gone.

Basic, 485 U.S. at 248.

The Court's "any showing" language indicates that the Court contemplated that defendants be provided a broad range of options in seeking to rebut the presumption of reliance. A demonstration that the alleged misrepresentation was not material falls comfortably within the "any showing" language. Proof that a misrepresentation was not material severs the link between the misrepresentation and the price paid for stock, because common sense suggests that a non-material misrepresentation will have no effect on the price the market as a whole is willing to pay for a company's stock.

One of the best ways for a defendant to demonstrate that an alleged misrepresentation was not "material" is, of course, to demonstrate that it had no impact on the company's stock price. *See Salomon Analyst*, 544 F.3d at 484 (defendants may rebut presumption of reliance "by showing, for example, the absence of a price impact"). As the Third Circuit explained, "Evidence an allegedly corrective disclosure did not affect the market price undermines the fraud-

on-the-market presumption of reliance for several reasons. . . . Even if a plaintiff could establish the market was efficient notwithstanding a lack of market impact, under our precedents the lack of market impact may indicate the misstatements were immaterial – a distinct basis for rebuttal." *In re: DVI*, 2011 U.S. App. LEXIS 6302, at *35-*36.

Demonstrating that the alleged misrepresentations had no effect on stock price is precisely what Halliburton did in the district court. It introduced significant evidence that neither the alleged misrepresentations nor the subsequent "corrective" statements caused movement in Halliburton's stock price.[4] The district court's finding of fact that it was more likely than not that the alleged misrepresented had not moved the market price (either when made or at the time of the corrective disclosure) was well supported by the evidence.

---

[4] As Respondents demonstrate, the courts below did not require Petitioners to demonstrate "loss causation" as a prerequisite to class certification. Resp. Br. 17-19. Indeed, the Fifth Circuit stated explicitly that Plaintiffs could meet their evidentiary burden by showing *either* that the alleged misrepresentation resulted in an inflated stock purchase *or* that the stock price dropped following disclosure of corrective information. Pet. App. 116a.

II. THE DISTRICT COURT PROPERLY GRANTED HALLIBURTON AN OPPORTUNITY FOR REBUTTAL AT THE CLASS CERTIFICATION STAGE

A. Certification of a Class Is Improper Unless the Movant Demonstrates By a Preponderance of the Evidence That He Has Met All the Requirements of Rule 23, Including Predominance

Petitioners assert the right to sue Halliburton not only on their own behalf but also as a representative of the thousands of others who purchased Halliburton stock during a 2 1/2-year period beginning in June 1999. Fed.R.Civ.P. 23 imposes numerous requirements on those seeking to maintain such a representative action, including the prerequisites of Rule 23(a) (numerosity, commonality, typicality, and fair/adequate representation) as well as (under the circumstances of this case) a judicial finding "that the questions of law or fact common to class members predominate over any questions affecting only individual members, and that a class action is superior to other available methods for fairly and efficiently adjudicating the controversy." Fed.R.Civ.P. 23(b)(3).

The Court has held that "any" class action "may only be certified if the trial court is satisfied, after a rigorous analysis, that the prerequisites of Rule 23(a) have been satisfied." *General Tel. Co. Southwest v. Falcon,* 457 U.S. 147, 161 (1982). Although the language from *Falcon* refers specifically to Rule 23(a),

federal appeals courts have generally understood the Court's "rigorous analysis" directive to apply to all of the requirements imposed by Rule 23. *See, e.g., In re: Initial Public Offering Securities Litigation* ["*In re: IPO*"], 471 F.3d 24, 33 n.3 (2d Cir. 2006) ("We see no reason to doubt that what the Supreme Court said about Rule 23(a) requirements applies with equal force to all Rule 23 requirements, including those set forth in Rule 23(b)(3)."). *See also, id.* at 40 (prohibiting certification of a class unless the district court explicitly finds that each Rule 23 requirement has been met, and overturning a prior Second Circuit standard under which it was sufficient to make "some showing" with respect to each requirement); *Szabo v. Bridgeport Machines, Inc.*, 249 F.3d 672, 676 (7th Cir. 2001) ("Before deciding whether to allow a case to proceed as a class action, . . . a judge should make whatever factual and legal inquiries are necessary under Rule 23."); *Gariety v. Grant Thornton, LLP*, 368 F.3d 356, 367 (4th Cir. 2004) (reversing class certification order because district court failed to undertake "a rigorous analysis" of each Rule 23 requirement).

Of particular relevance to this case is the Rule 23(b)(3) "predominance" requirement. To prevail in a securities fraud action, a plaintiff must demonstrate, among other things, that he *relied* on the defendant's misrepresentation. *Dura Pharms.*, 544 U.S. at 341-42. Thus, to meet Rule 23(b)(3)'s predominance requirement, a plaintiff needs to demonstrate that reliance can be established on a class-wide basis, because if reliance can only be established on a plaintiff-by-plaintiff basis, questions of law or fact common to class members could never be deemed to "predominate"

over questions affecting only individual members. *See Basic*, 485 U.S. at 242 ("Requiring proof of individualized reliance from each member of the proposed plaintiff class effectively would have prevented respondents from proceeding with a class action, since individual issues then would have overwhelmed the common ones."). In sum, whether Petitioners are entitled to a presumption of reliance is very much a Rule 23(b)(3) class certification issue, because Petitioners cannot meet the "predominance" requirement (and thus are not entitled to certification) unless they are afforded that presumption.

B. That Reliance and Materiality Are Also Merits Issues Does Not Diminish the Importance of Examining Those Issue Closely in Connection with a Determination of Whether Petitioners Can Show Predominance

As noted above, reliance and materiality also "merits" issues: Petitioners cannot prevail on its securities fraud claim unless they can establish that they purchased Halliburton securities at an inflated price in reliance on Halliburton's material misrepresentations. Petitioners assert that that delving into those issues at the class certification stage is premature, violates Rule 23, and deprives them of the opportunity for full discovery prior to a decision on merits-based issues. Pet. Br. 46-56.

Those assertions are not well taken. While the Supreme Court has cautioned against weighing the strength of the merits of a plaintiff's claims as a basis

for granting or denying class certification, it has stated unequivocally that a district court should not shy away from considering evidence that goes to the merits in determining whether the plaintiff has met each of the Rule 23 requirements. *Falcon*, 457 U.S. at 160 ("the class determination generally involves considerations that are enmeshed in the factual and legal issues comprising the plaintiff's cause of action"). The Court has explained that:

> Evaluation of many of the questions entering into determination of class action questions is intimately involved with the merits of the claims. The typicality of the representative's claims or defenses, the adequacy of the representative, and the presence of common questions of law or fact are obvious examples. The more complex determinations required in Rule 23(b)(3) class actions entail even greater entanglement with the merits.

Coopers & Lybrand v. Livesay, 437 U.S. 463, 469 n.12 (1978) (emphasis added) (quoting 15 C. Wright, A. Miller & E. Cooper, *Federal Practice and Procedure*, § 3911 n.45 (1976)).

Petitioners' discovery complaints ring hollow. They did not seek class certification for nearly five years following the filing of the complaint; if they believed that that was an inadequate period of time to complete all discovery relevant to class certification, they should have delayed filing their certification motion until that discovery could be completed. Moreover, the decision denying class certification does not prevent Petitioners

from proceeding forward on the merits; nothing prevents them, before trial, from undertaking whatever discovery they deem necessary to establish loss causation or any other merits-based issue. In any event, Petitioners' discovery complaints are newly minted; they failed to raise them in the lower courts in connection with the class certification motion and should not be permitted to do so now for the first time.

While conceding that *Basic* envisions permitting a defendant to rebut the presumption of reliance, the United States asserts that:

> [T]he *Basic* Court's analysis reflects an expectation that any rebuttal will occur at summary judgment or at trial, not at the outset of the case. A defendant who rebuts the presumption of reliance defeats the plaintiffs' claims on the merits by preventing him from establishing an essential element of his cause of action. So long as the evidence by which the defendant seeks to rebut the presumption is likely to be common to class members generally, the possibility of a successful rebuttal does not render the case unsuitable for class treatment.

U.S. Br. 7.

The United States cites no case law in support of its assertion, which makes little sense. It may sometimes be true that a defendant who rebuts the presumption of reliance "defeats the plaintiffs' claims on the merits." But if, as the United States would surely concede, such a rebuttal also defeats a claim for

class certification by demonstrating the absence of the predominance required by Rule 23(b)(3), what possible grounds would there be for allowing class certification to proceed? It is illogical to suggest that a court should make it easier for a plaintiff to win certification in those situations in which the plaintiff may have evidence demonstrating that the entire securities fraud claim is meritless.

Moreover, it will not necessarily be the case that an individual plaintiff cannot proceed to trial in the face of findings that the market was not defrauded and that the presumption of reliance is unwarranted. For example, the potential tort litigation liabilities of companies such as Halliburton are often highly uncertain. Even if the company makes statements that could be interpreted by some as downplaying to an unwarranted degree the potential for large jury verdicts, major market players are unlikely to be misled – they know full well the uncertain nature of litigation and thus are likely to bid the price of the company's down to a level that fully factors in the potential for adverse jury verdicts. Under those circumstances, the market cannot be said to have been defrauded, and the presumption of reliance is unwarranted. But some individual investors may have actually relied on the company's statements and purchased the company's stock at a price they would have been unwilling to pay had they fully appreciated the risks of litigation. Such individuals could establish individual reliance and proceed with their individual claims even without the benefit of the presumption of reliance.

Basic established a defendant's right to rebut the

presumption of reliance without providing any indication that exercise of that right would have to be deferred to summary judgment or trial. The Court summarized its findings in *Basic* as follows: (1) "it is not inappropriate to apply a presumption of reliance supported by the fraud-on-the-market theory"; (2) that presumption is "rebuttable"; and (3) the district court's initial certification of the class "was appropriate when made but is subject on remand to such adjustment, if any, as developing circumstances demand." *Id.* at 250. Nothing in the Court's summation of its holdings indicated a belief that a defendant's efforts to rebut the presumption of reliance are premature at the class certification stage.

Petitioners nonetheless pointed to *Basic*'s Footnote 29 for the proposition that once a plaintiff establishes that a security trades in an efficient market, a defendant's effort to rebut the presumption of reliance should be delayed until trial, or until the summary judgment stage at the earliest. Pet. Br. 35. That interpretation of Footnote 29 is untenable; Petitioners read far more into the footnote than the Supreme Court could possibly have intended.

Footnote 29 follows the Court's lengthy explanation of numerous methods by which a defendant might rebut the presumption of reliance. It states, in substantial part:

> We note there may be a certain incongruity between the assumption that Basic shares are traded on a well-developed, efficient, and information-hungry market, and the allegation

> that such a market could remain misinformed, and its valuation of Basic shares depressed, for 14 months, on the basis of three public statements. Proof of that sort is a matter for trial, throughout which the District Court retains the authority to amend the certification order as may be appropriate.

Basic, 485 U.S. at 249 n.29.

Petitioners apparently interpret the phrase "proof of that sort" as encompassing *any* effort by a defendant to rebut the presumption of reliance. Order at 19. But it is highly unlikely that the Court intended the phrase to sweep that broadly. Rather, it is much more likely that "proof of that sort" was intended to refer only to proof of the sort described in the first sentence of Footnote 29 – that is, a defendant's proof that *any* "well-developed, efficient, and information-hungry market" is highly unlikely to remain misinformed (and thus overvalued or undervalued) for an extended period of time based on a handful of misleading statements. Had the Court really intended the phrase "proof of that sort" to encompass the types of rebuttal evidence described at length in the main text, it is far more likely that the Court would have included the phrase in the main text instead of relegating it to a footnote.[5]

---

[5] Courts have been acutely aware of the need to impose some limits on the quantity of evidence that can be introduced at a class certification hearing, in order to avoid mini-trials that consume too much of the courts' resources. *See, e.g., Salomon*, 544 F.3d at 486. The Court may have deemed the type of rebuttal evidence described in the first sentence of Footnote 29 to be too

Moreover, the Court's statement that "proof of that sort is a matter for trial" may simply have been an acknowledgment that the case before it was well-advanced (*e.g.*, discovery had been completed) and that the most sensible time for that particular defendant to offer rebuttal evidence would be at the impending trial.

Most importantly, Petitioners' reading of Footnote 29 is inconsistent with the remainder of the Court's opinion, which repeatedly emphasized that a class certification order was subject to revision at all times prior to final judgment. For example, the Court stated that class certification was subject on remand to adjustments "as developing circumstances demand." *Id.* at 250. The quoted phrase indicates that the Court contemplated that defendants should *not* be required to wait for trial before attempting to rebut the presumption of reliance.

The Third Circuit this week concluded that defendants should be permitted to challenge class certification by attempting to rebut the presumption of reliance: "We believe rebuttal of the presumption of reliance falls within the ambit of issues that, if relevant, should be addressed by district courts *at the class certification stage*. The District Court did not err in evaluating Deloitte's rebuttal arguments." *In re: DVI*, 2011 U.S. App. LEXIS 6302, at *36 (emphasis added). The appeals court rejected the plaintiffs' argument that Footnote 29 of *Basic* precluded raising rebuttal arguments at the certification stage:

This footnote appears to have responded to the

---

extensive to be feasibly included in a class certification hearing.

> dissent in *Basic* and was not essential to *Basic*'s holding. *See* [485 U.S.] at 259-63 (White, J., concurring in part and dissenting in part) (discussing the factual peculiarities of the trades in issue). Taken literally, note 29 may even appear to preclude a court from evaluating evidence presented by a defendant at class certification to demonstrate the market is inefficient. But this widespread practice is permitted even in circuits that do not allow the examination of rebuttal evidence at the class certification stage. *See, e.g., Polymedica*, 432 F.3d at 17-19.

Id. at *35. The Second Circuit has similarly interpreted *Basic* as permitting defendants to rebut the presumption of reliance "prior to class certification, by showing, for example, the absence of price impact." *Salomon Analyst*, 544 F.3d at 484.

The Fifth Circuit diverges somewhat from other circuits regarding the strength of the presumption created by *Basic* and what the defendant must do to overcome that presumption. The Fifth Circuit has concluded that the presumption disappears the moment the defendant makes "any showing" that severs the link between the misrepresentation and the plaintiffs' loss, and that the defendant need not go on to carry the ultimate burden of persuasion regarding the existence or non-existence of the link. *Oscar Private Equity Investments v. Allegiance Telecom, Inc.*, 487 F.3d 261, 265 (5th Cir. 2007). Some other appeals courts have concluded that *Basic* created a stronger presumption and have required defendants to make a

correspondingly greater showing in order to defeat the presumption of reliance.

WLF takes no position regarding which circuit more accurately characterizes the strength of the presumption the Court intended to create in *Basic*.[6] But this relatively minor disagreement between the Fifth Circuit and other circuits should not be allowed to obscure the close similarity of the Fifth Circuit's approach to the approach of most other circuits. Rejecting the Fifth Circuit's entire approach to securities law class certification issues – which is what Petitioners and the United States are asking the Court to do – would entail rejecting the substantially similar approaches adopted by most other circuits.

More importantly, the Court's resolution of the Rule 301 issue should not affect the ultimate disposition of this case because the denial of class certification was

---

[6] WLF notes, however, that in discussing the presumption, *Basic* makes reference to Rule 301 of the Federal Rules of Evidence. *Basic*, 485 U.S. at 245. Rule 301 describes a weak form of presumption – one that shifts to the opposing party the burden of coming forward with evidence, not the burden of persuasion. *See, e.g., St. Mary's Honor Center v. Hicks*, 509 U.S. 502 (1993) (when a Title VII discriminatory treatment plaintiff establishes a prima facie case of racial discrimination, the presumption thereby created is governed by FRE 301, and only the burden of coming forward with evidence – not the burden of proof – shifts to the defendant). Were Rule 301 to apply to the presumption of reliance, the presumption would (per the Fifth Circuit's *Oscar* decision) disappear the moment a securities class action defendant filed *any* evidence designed to demonstrate a severance of the link between the alleged misrepresentation and the price paid by purchasers of Halliburton stock.

based on the lower courts' determination – after reviewing extensive evidence submitted by both sides – that Halliburton's alleged misrepresentations did not affect the price of Halliburton's stock. In other words, the outcome would have been the same even if the lower courts had imposed a greater evidentiary burden on Halliburton.

III. BECAUSE CLASS CERTIFICATION DECISIONS ARE SO OFTEN OUTCOME-DETERMINATIVE, THE COURT SHOULD BE PARTICULARLY VIGILANT IN ENFORCING STRICT ADHERENCE TO RULE 23

Empirical research demonstrates the crucial role that class certification decisions play in the outcome of high-stakes class action lawsuits. Litigation costs make it very difficult for the party that loses the class certification decision to continue with the litigation – with the result that erroneous certification decisions are often effectively unreviewable. In light of that concern, WLF respectfully urges the Court to use this case to adopt clear rules that will encourage district judges to grant class certification motions only after they have determined that all the requirements of Rule 23 have been satisfied.

As numerous courts have recognized, companies that face a large certified class and hence enormous potential damages are "under intense pressure to settle." *In re Rhone-Poulenc Rorer, Inc.*, 51 F.3d 1293, 1298 (7th Cir.) (Posner, C.J.), *cert. denied*, 516 U.S. 867 (1995). If they do not want to "roll the dice," they

settle, such that "the class certification – the ruling that will have forced them to settle – will never be reviewed." *Id.* Such settlements can in many instances legitimately be deemed "blackmail settlements." H. Friendly, *Federal Jurisdiction: A General View* 120 (1973); *see also Castano v. American Tobacco Co.*, 84 F.3d 734, 746 (5th Cir. 1996) (pressure emanating from certification of big classes amount to "judicial blackmail," creating "insurmountable pressure on defendants to settle"; "the risk of facing an all-or-nothing verdict presents too high a risk, even when the probability of an adverse judgment is low").

Securities fraud class action litigation presents particular problems for defendants because they are especially prone to asymmetrical discovery costs: though they possess few relevant documents subject to discovery, plaintiffs can routinely demand that millions of pages of documents be produced by the defendants. J. Alexander, *Do the Merits Matter? A Study of Settlements in Securities Class Actions*, 43 STAN. L. REV. 497, 548-49, 571 (Feb. 1991). Moreover, because securities fraud cases often require the attention and participation of senior corporate executives, defendants in such actions can face costly and debilitating disruptions of their business activities. R. Bone & D. Evans, *Class Certification and the Substantive Merits*, 51 DUKE L.J. 1251, 1299 (Feb. 2002). The costs of a certified class action become prohibitive long before a summary judgment motion can be prepared. Alexander, 43 STAN. L. REV. at 585-87 (case study); D. Towns, *Merit Based Class Certification*, 78 VA. L. REV. 1001, 1031 (1992). One study concluded that, driven largely by litigation costs, "the vast majority of certified class

actions settle, most soon after certification." Bone & Evans, 51 DUKE L. J. at 1291.

The tendency of securities fraud class actions to settle without any relation to the underlying merits of the suits undermines the aims of the federal securities laws. The federal securities fraud statutes aim to deter securities fraud or manipulation, and "to achieve a high standard of business ethics in the securities industry." *Affiliated Ute Citizens of Utah v. United States*, 406 U.S. 128, 151 (1972). But economists doubt that those laws can achieve their purpose given the consensus view that there is little correlation between being named in a securities fraud lawsuit and the incidence of fraud. *See, e.g.*, M. Johnson, *et al.*, In re Silicon Graphics Inc.: *Shareholders Wealth Effects Resulting from the Interpretation of the Private Securities Litigation Reform Act's Pleading Standard*, 73 S. CAL. L. REV. 773, 782 (May 2000).

In their zeal to promote a plaintiff-friendly outcomes in securities law cases, Petitioners and the United States have espoused a rule that is directly contrary to this Court's holding in *Basic*. That decision explicitly authorized defendants to attempt to defeat class certification by introducing evidence that the market did not, in fact, rely on the alleged misrepresentations. *Basic* has been settled law for more than two decades; WLF respectfully submits that if Petitioners and the United States seek to overturn *Basic*, they should take their case to Congress.

CONCLUSION

Amicus curiae requests that the Court affirm the the judgment below.

Respectfully submitted,

Daniel J. Popeo
